(3) If a compliant is disposed of by restitution, the complainant, if any, shall be notified of the disposition in writing.

(c) ADVISORY OPINIONS AND INTERPRETATIVE RULINGS: Requests for advisory opinions or interpretative rulings involving franking questions shall be processed in accordance with Rules 11 and 12.

RULE 14: PROCEDURES FOR WAIVERS

(a) AUTHORITY FOR WAIVERS: The Committee is authorized to grant a waiver under the following provisions of the Standing Rules of the Senate:

(1) Section 101(h) of the Ethics in Government Act of 1978, as amended (Rule XXXIV), relating to the filing of financial disclosure reports by individuals who are ex-

pected to perform or who have performed the duties of their offices or positions for less than one hundred and thirty days in a calendar year;

(2) Section 102(a)(2)(D) of the Ethics in Government Act, as amended (Rule XXXIV), relating to the reporting of gifts;

(3) Paragraph 1 of Rule XXXV relating to acceptance of gifts; or

(4) Paragraph 5 of Rule XLI relating to applicability of any of the provisions of the Code of Official Conduct to an employee of the Senate hired on a per diem basis.

(b) REQUESTS FOR WAIVERS: A request for a waiver under paragraph (a) must be directed to the Chairman or Vice Chairman in writing and must specify the nature of the waiver being sought and explain in detail the facts alleged to justify a waiver. In the case of a request submitted by an employee, the views of his or her supervisor (as determined under paragraph 11 of Rule XXXVII of the Standing Rules of the Senate) should be included with the waiver request.

(c) RULING: The Committee shall rule on a waiver request by recorded vote, with a majority of those voting affirming the decision.

(d) AVAILABILITY OF WAIVER DETERMINATIONS: A brief description of any waiver granted by the Committee, with appropriate deletions to ensure confidentiality, shall be made available for review upon request in the Committee office. Waivers granted by the Committee pursuant to the Ethics in Government Act of 1978, as amended, may only be granted pursuant to a publicly available request as required by the Act.

RULE 15: DEFINITION OF "OFFICER OR EMPLOYEE"

(a) As used in the applicable resolutions and in these rules and procedures, the term "officer or employee of the Senate" means:

(1) An elected officer of the Senate who is not a Member of the Senate;

(2) An employee of the Senate, any committee or subcommittee of the Senate, or any Member of the Senate;

(3) The Legislative Counsel of the Senate or any employee of his office;

(4) An Official Reporter of Debates of the Senate and any person employed by the Official Reporters of Debates of the Senate in connection with the performance of their official duties;

(5) A member of the Capitol Police force whose compensation is disbursed by the Secretary of the Senate;

(6) An employee of the Vice President, if such employee's compensation is disbursed by the Secretary of the Senate;

(7) An employee of a joint committee of the Congress whose compensation is disbursed by the Secretary of the Senate;

(8) An officer or employee of any department or agency of the Federal Government whose services are being utilized on a full-time and continuing basis by a Member, officer, employee, or committee of the Senate in accordance with Rule XLI(3) of the Standing Rules of the Senate; and

(9) Any other individual whose full-time services are utilized for more than ninety days in a calendar year by a Member, officer, employee, or committee of the Senate in the conduct of official duties in accordance with Rule XLI(4) of the Standing Rules of the Senate.

RULE 16: COMMITTEE STAFF

(a) COMMITTEE POLICY:

(1) The staff is to be assembled and retained as a permanent, professional, nonpartisan staff.

(2) Each member of the staff shall be professional and demonstrably qualified for the position for which he or she is hired.

(3) The staff as a whole and each member of the staff shall perform all official duties in a nonpartisan manner.

(4) No member of the staff shall engage in any partisan political activity directly affecting any congressional or presidential election.

(5) No member of the staff or outside counsel may accept public speaking engagements or write for publication on any subjects that is in any way related to his or her employment or duties with the Committee without specific advance permission from the Chairman and Vice Chairman.

(6) No member of the staff may make public, without Committee approval, any Committee Sensitive or classified information, documents, or other material obtained during the course of his or her employment with the Committee.

(b) APPOINTMENT OF STAFF:

(1) The appointment of all staff members shall be approved by the Chairman and Vice Chairman, acting jointly.

(2) The Committee may determine by majority vote that it is necessary to retain staff members, including a staff recommended by a special counsel, for the purpose of a particular initial review, investigation, or other proceeding. Such staff shall be retained only for the duration of that particular undertaking.

(3) The Committee is authorized to retain and compensate counsel not employed by the Senate (or by any department or agency of the Executive Branch of the Government) whenever the Committee determines that the retention of outside counsel if necessary or appropriate for any action regarding any complaint or allegation, initial review, investigation, or other proceeding, which in the determination of the Committee, is more appropriately conducted by counsel not employed by the Government of the United States as a regular employee. The Committee shall retain and compensate outside counsel to conduct any investigation undertaken after an initial review of a sworn complaint, unless the Committee determines that the use of outside counsel is not appropriate in the particular case.

(c) DISMISSAL OF STAFF: A staff member may not be removed for partisan, political reasons, or merely as a consequence of the rotation of the Committee membership. The Chairman and Vice Chairman, acting jointly, shall approve the dismissal of any staff member.

(d) STAFF WORKS FOR COMMITTEE AS WHOLE: All staff employed by the Committee or housed in Committee offices shall work for the Committee as a whole, under the general direction of the Chairman and Vice Chairman, and the immediate direction of the staff director or outside counsel.

(e) NOTICE OF SUMMONS TO TESTIFY: Each member of the Committee staff shall immediately notify the Committee in the event that he or she is called upon by a properly constituted authority to testify or provide confidential information obtained as a result of and during his or her employment with the Committee.

RULE 17: CHANGES IN SUPPLEMENTARY PROCEDURAL RULES

(a) ADOPTION OF CHANGES IN SUPPLEMENTARY RULES: The Rules of the Committee, other than rules established by statute, or by the Standing Rules and Standing Orders of the Senate, may be modified, amended, or suspended at any time, pursuant to a majority vote of the entire membership taken at a meeting called with due notice when prior written notice of the proposed change has been provided each member of the Committee.

(b) PUBLICATION: Any amendments adopted to the Rules of this Committee shall be published in the Congressional Record in accordance with Rule XXVI(2) of the Standing Rules of the Senate.●

DRUNK AND DRUGGED AWARENESS WEEK

● Mr. COATS. Mr. President, I rise today to commend President Bush on his declaration of December 10-16, 1989, as "Drunk and Drugged Awareness Week." As the Republican leader of the Labor and Human Resources Subcommittee on Children, Family, Drugs and Alcoholism, and, more importantly, as a father of three, I am very concerned about the destruction caused by drug and alcohol abuse in our country.

During the past year, Congress has devoted much time and energy to the "War on Drugs." The President's declaration reminds us of something we sometimes overlook. Alcohol abuse is as much a part of our war as crack or cocaine, and, like illegal drugs, alcohol has torn apart many families and shattered many lives.

The affects of alcohol abuse know no bounds, and tragically, these consequences are not limited to the abusers themselves. Look no further than the American family for a sobering view of alcohol's devastating influence. Divorce is more than seven times higher among alcoholics and their spouses, and today, more than 40 percent of all problems which surface in family courts around the country involve alcohol abuse.

I applaud the President's declaration and I am happy to see that many Americans are taking steps to make the public aware of this serious problem. Groups such as M.A.D.D., Community Watch, and Just Say No have made great strides in showing the American people the cold realities of substance abuse.

In particular, I would like to single out the fine work of the National Citizens Commission on Alcoholism [NCCA]. The NCCA has made significant contributions by supporting research and educating society as to the calamitous effects of alcohol misuse. I am especially pleased with its efforts to raise on-campus awareness at our colleges and universities.

Further, the NCCA's program of public service announcements, in both English and Spanish, reaches out to millions with its important message of sobriety and moderation. In fact, this year's intensive media efforts are expected to result in over $50 million in contributed broadcast time and print space. I am proud to serve as honorary

chairman of the NCCA and I am even prouder of its persistence in combating substance abuse.

Mr. President, I commend all of these life-saving organizations, and encourage their vitality and growth throughout the country. I believe it is crucial that we recognize the problems associated with substance abuse and take the necessary steps to make our citizens aware of the magnitude of this issue. Every inch of ground that we gain in this war will bring our Nation that much closer to winning the battle against drug and alcohol abuse once and for all.●

MS. CYNTHIA ANN BROAD, MICHIGAN TEACHER OF THE YEAR

● Mr. RIEGLE. Mr. President, I rise today to pay tribute to Ms. Cynthia Ann Broad who was recently selected as Michigan's "Teacher of the Year" for the 1989-90 school year. Ms. Broad's outstanding work in the field of education and her unending dedication to her students make Ms. Broad most deserving of this special honor.

Ms. Broad has made invaluable contributions on both a State and local level. She was instrumental in organizing and developing activities for a cultural exchange program for 40 visiting Chinese educators. She has conducted over 30 workshops to discuss and develop the special education curriculum in Michigan. In 1978 she became the first special education teacher to score 100 percent on a classroom audit by the Macomb Intermediate School District. Her research and creative ideas have had a substantial impact on the quality of special education in Macomb County and throughout the State.

Administrators, parents, and students alike have the utmost respect and admiration for this outstanding educator. Dan Sapp, director of special education, had this to say about her performance: "Cynthia is one teacher that every parent wishes for their child and each administrator hopes to meet once during his career."

Mr. President, I am very pleased to join in honoring Ms. Broad for her commitment to excellence in education. We are all grateful to her and to all teachers who have devoted their lives to helping our children develop to their fullest potential.●

CENTRAL INTELLIGENCE AGENCY

● Mr. SIMON. Mr. President, in Newsday, David Wise, the author of a book about the Central Intelligence Agency [CIA], has an article which admonishes us not to use the CIA for assassinations.

His advice is sound.

I believe my colleagues in the House and Senate would find his article of real interest. I encourage Members and their staffs to read the article.

I ask to insert it into the RECORD at this point.

The article follows:

[From New York Newsday, Oct. 22, 1989]

NO LICENSE TO KILL

(By David Wise)

Early in 1961, the Central Intelligence Agency fed gelatin capsules containing botulinum toxin to a group of monkeys. The monkeys died.

This result, while predictable, pleased the CIA officials who had ordered the laboratory experiment. Because the deadly poison would next be administered, they hoped, to Fidel Castro, Cuba's prime minister.

To that end, the CIA contacted John Rosselli, a dapper Chicago mobster regarded as an expert in the elimination of objectionable persons. At a meeting at the Fontainebleau Hotel in Miami Beach, the capsules and a bundle of cash were delivered by a CIA representative to Rosselli. The mobster was cautioned that the poison would not work in "boiling soups." Rosselli in turn gave the capsules to a Cuban who worked in a restaurant frequented by Castro, and who was supposed to slip the poison into the Cuban leader's food.

The plot failed—Castro stopped going to the restaurant—as did a number of other CIA schemes to incapacitate or murder Castro, several of which seemed to have been invented by Woody Allen: a plan to impregnate Castro's cigars with something like LSD, in the hope he would smoke one before delivering a speech; another plan to dust his shoes with thallium to cause his beard to fall out, thus ruining his macho image, and an effort to sprinkle his diving suit with a fungus that would produce a hideous chronic skin disease known as Madura foot.

The CIA was involved, directly or indirectly, in plots against seven foreign leaders: Castro, Patrice Lumumba of the Congo, Rafael Trujillo of the Dominican Republic, President Salvador Allende of Chile, President Ngo Dinh Diem of South Vietnam, President Francois Duvalier of Haiti and President Sukarno of Indonesia. Four of these leaders died violently, with the CIA's level of complicity and involvement varying widely.

All of this, including the details about the monkeys, the botulinum pills and the mob, is set forth in one of the most remarkable documents ever issued about the U.S. government, "Alleged Assassination Plots Involving Foreign Leaders." The 347-page report was made public in 1975 by the Senate intelligence committee then headed by Sen. Frank Church, an Idaho Democrat.

The committee also revealed that the CIA had a unit called Executive Action, which was in charge of planning to bump off foreign leaders, and something called the "Health Alteration Committee," the purpose of which was exactly what its name stated. It was just such ghastly details—including the CIA's effort to infect Lumumba's toothbrush with a deadly African disease—that led President Gerald Ford to issue an executive order on Feb. 18, 1976, banning assassinations by U.S. agencies.

From that day forward, the United States, on paper at least, has been out of the assassination business. Every subsequent president—Jimmy Carter, Ronald Reagan and George Bush—has continued the ban. The Reagan executive order on intelligence, issued in 1981, still stands. It states: "No person employed by or acting on behalf of the United States Government shall engage in, or conspire to engage in, assassination."

That 22-word prohibition, is, of course, at the heart of the debate over the Bush administration's handling of the failed coup in Panama earlier this month against dictator Manuel Antonio Noriega.

Only last week, CIA director William Webster called on Congress and the president to give the intelligence agency greater freedom to deal with coup plotters, even if there is risk—and there usually is—that the target will be murdered. While the United States does not engage in "selective, individual assassination," Webster said, the CIA's authority to deal with plotters should be more clearly defined.

Stung by congressional criticism that the administration muffed an opportunity to rid the hemisphere of the Panamanian strongman, White House officials have blamed the Senate intelligence committee for interpreting the ban on assassination to mean that the United States could have virtually no contact with coup plotters in Panama.

Brent Scowcroft, the president's national security advisor, went on television in the wake of the coup attempt and excoriated the Senate committee—the permanent successor to the Church panel—for "micromanagement of the executive branch going clear back to the executive order prohibiting assassinations, which was forced by the Congress."

Behind Scowcroft's complaint was the committee's objection in 1988 to a proposal by the Reagan administration that the CIA support a group of Panamanian officers plotting a coup against Noriega. The senators said the plan might violate the assassination ban. The CIA covert operation was ended, although officials disagree about whether the CIA or the Senate committee caused the plan to be abandoned.

But the political maneuvering and finger-pointing over the Panama coup has raised, in the starkest possible terms, the larger question of whether the United States is prepared to use political assassination as an instrument of foreign policy. Does the ban on assassination mean that the U.S. government cannot encourage, or even talk with, coup plotters? It isn't clear, which makes Webster's call for better guidelines understandable.

The White House, in fact, has supported Webster's position and is reportedly drafting just such new guidelines for American officials in Panama. The new rules are not likely to be restrictive, given Bush's repeated exhortations to Panamanians to overthrow Noriega, who has been indicted on drug-trafficking charges in the United States.

"I'd like to see him out of there," the president reiterated after the coup attempt.

One difficulty is that the executive order on intelligence does not define "assassination."

Unlike most laws, executive orders do not always spell out the meaning of the terms used. Although hiring a Mafia hit man to plug Fidel Castro would fairly clearly be prohibited by the president's order, it is much less clear whether a conversation between a CIA officer in Panama and a dissident colonel planning a coup—which might or might not result in the death of its target—would violate the order.

As Gen. Maxwell Taylor put it, after the murder of South Vietnam's Diem in a coup

supported by the Kennedy administration, "a coop is not like a tea party." Once it begins, in other words, people may get killed.

Trying to define assassination, and attempting to spell out what kind of activity by U.S. officials might be permissible without violating the ban, is to set foot on what lawyers call a "slippery slope." In the coup in Vietnam, Diem was killed, but Johnny Rosselli might argue that it was not a hit directed by the CIA. Except that Rosselli cannot make that point because his body was found wrapped in chains inside a 55-gallon oil drum floating in Biscayne Bay in 1976, not long after he testified to the Church committee.

To an extent, the presidential ban on assassination appears to conflict with, or certainly to restrict, the authority claimed by presidents since Harry Truman to conduct covert operations under the National Security Act of 1947. Although that law, which created the CIA, does not explicitly authorize such operations, it allows the president to order the agency to carry out "other functions and duties." That loophole has been cited as the legal basis for covert operations that have ranged over the years from the Bay of Pigs invasion of Cuba to the Iran-contra arms-for-hostages scheme.

As a practical matter, U.S. diplomats and intelligence officers talk to opposition leaders around the world. No one would suggest that the president issue a blanket ban on such contacts, although the White House has complained that congressional interference could have that result. Beyond mere talk, however, when the United States encourages coup plotters, or channels money or arms to them, it risks violating the presidential assassination ban.

There was good reason for that ban, as the 1975 revelations of CIA murder plots demonstrated. No one appointed the president of the United States to overthrow the governments in peacetime, much less to assassinate their leaders, as nasty or corrupt as they may be. The government should confine itself to collecting intelligence about potential coups, but it should not instigate them or promise military aid. Aside from all other reasons, and there are many, there is the risk that assassination of a head of state could lead to retaliation against our own leaders. In the absence of a declaration of war by Congress, the Constitution would not seem to provide for hit men operating out of the White House.●

CHILDREN'S TELEVISION LEGISLATION

● Mr. INOUYE. Mr. President, on January 8, 1990, Newsweek carried an article "Watch What Kids Watch." The article points out that the overwhelming majority of new children's fare available on commercial television has little educational material and that these programs cannot even be argued to promote prosocial behavior. To make matters worse, many of these programs have products associated with them, such as candy and toys.

The education of our youth is a national crisis. On average, 25 percent of elementary and secondary students drop out of school each year; 40 percent of these dropouts are blacks and over 50 percent are Hispanics. Approximately 13 percent of 17 year olds cannot read, write or count.

As further evidence of this disturbing trend, the 1989 "Report to the Nation on the Future of Mathematics Education" by the National Research Council concluded that the United States is experiencing a decline in mathematical skills and interest. For example, in 1987, only 55 percent of the 700 tellers hired by Chemical Bank passed an eighth grade level mathematics test. In 1983, more than 70 percent passed the test. In addition, from 1976 to 1986, high school student interest in mathematics declined by 50 percent.

The results of the "Second International Math Study" (1982) indicate that the performance of the top 5 percent of United States math students is matched by the top 50 percent of students in Japan. In addition, the top 1 percent of U.S. students scored lowest of the top 1 percent of all participating countries. Thus, our best math students ranked the lowest when compared to their counterparts in other countries.

If we are going to improve the education of this country's youth, we cannot rely on schools alone. Nor can we rely solely on their parents. Instead, we must be creative and determine how best to reach them.

Our children spend more time watching television than any other single activity—except for sleep. The fact is that children from all socioeconomic groups watch educational programming and the large body of evidence shows that children learn from educational television programming. Yet, only public broadcasting provides a significant amount of educational children's programming; and while public broadcasting is to be praised for these efforts, it is not enough. Commercial broadcasters must also participate, but today commercial television is practically devoid of educational children's programming.

I believe that this article highlights the reason that we need to enact legislation designed to increase the amount of educational and informational programming available to this Nation's children and to restrict the amount of commercial matter aired during these programs. In an effort to begin to address this deficiency, I have sponsored two bills: S. 797, the national endowment for children's educational programming; and S. 1992, the Children's Television Act of 1989. The objective of S. 797 is to establish a national endowment for children's educational television which will provide funding for the production of programming aimed at educating children. The bill was reported by the full committee on May 16, 1989 and passed the Senate on August 4, 1989. I hope the House will consider this bill shortly. I know they share my deep concern about this issue.

S. 1992 is complementary legislation designed to increase the amount of educational and informational broadcast television programming available to children on commercial stations. It also protects children from overcommercialization of programming. S. 1992 was reported out of committee late last year and is pending before the full Senate. I want everyone to know that I intend to bring this legislation before the Senate within the next 2 months. I will not let it languish.

It is clear that unless we take steps to stimulate the production and carriage of educational and informational children's programming and restrict the amount of commercial matter, we can only expect more of the same as described in this article. I ask that this article be printed in the RECORD at this point.

The article follows:

WATCH WHAT KIDS WATCH

(By Harry F. Waters)

The name of our town, folks, is Grover's Corners. The time is Saturday morning. Over there at the Gibbs house, 8-year-old George has skipped basketball practice again. Yet he's in front of the T.V. New show, it appears. Called "Captain N: The Game Master." All about a young boy who gets sucked inside a video game and likes it so much he refuses to return home. Wonder what Mrs. Gibbs would think of that. And over here at the Webbs, little Emily is watching "Beetlejuice." This one's about a mighty disgusting ghoul who teaches a young girl how to become—let's listen in a second—"the grossest kid in school." Well! Now both George and Emily have switched to "Slimer and the Real Ghostbusters." Or is it "Rude Dog & The Dweebs"? My. Things sure have changed in Grover's Corners.

Too bad the same can't be said for the state of children's television: while Grover's Corners was imagined by Thornton Wilder, its Saturday-morning video diversions are depressing real. After four decades of protests and promises, network "kidvid" remains a national embarrassment—a brain-rotting assault of animated comic books and shrieking commercials that borders on child abuse. But all of a sudden (Hey, kids!) there's tangible hope for significant reform (Hey, parents!). Later this winter, Congress is expected to approve a landmark bill obligating television stations to upgrade the air quality of children's programming. No one, however, knows whether George Bush will sign the bill or veto it. The man who would be our "education president" is about to confront a decision directly affecting almost every child in America.

It is to be hoped that Bush won't take his cue on the kidvid issue from his predecessor. Ronald Reagan vetoed nearly identical legislation as one of his last acts in office, claiming that it infringed upon broadcasters' First Amendment rights to free expression. In rebuttal, children's TV reformers cite the Communications Act's mandate that, to retain its license, every station must "serve the public interest." What's indisputable is that the Reagan administration bears heavy responsibility for kidvid's darkest age.

Under its deregulatory policies, stations jettisoned their few intelligent small-fry programs and replaced them with more lucrative shows that were, in effect, 30-minute commercials for toys. Though that trend has waned somewhat, crusaders like Peggy Charren, president of Action for Children's Television, have managed to contain their joy. The best that can be said about the current network offerings, muses Charren, is that "they don't make kids' hair fall out." But, she angrily adds, "most of them are just dumb. Is this the best that the wealthiest institutions in broadcasting can come up with? They should be ashamed of themselves."

To understand Charren's ire, one need only observe what's passing for the "new" kidvid season. Essentially, ABC's "The Adventures of the Gummi Bears" is a program-length commercial for a jellied candy, while NBC's "Captain N: The Game Master" is a program-length commercial for a video game (its youthful protagonist keeps encountering Nintendo's most popular heavies). CBS, however, has topped them both. "The California Raisins," which stars those toe-tapping little pitch-persons for the raisin industry, amounts to a commercial for another commercial.

As for the other new series, a grown-up viewer doesn't have to suffer from a case of sour grapes to discern some equally dubious messages. CBS, justifiably acclaimed for brightening everyone's weekends with "Pee-Wee's Playhouse," deserves a big demerit for unleashing "Rude Dog & The Dweebs." Its canine hero is exactly what his name suggests—an incorrigibly obnoxious wiseheimer who drives a hot-pink Caddy and disgustedly advises his nerdy companions to "Get rude!" Adult characters, on the other hand, tend to be stereotyped as hopeless klutzes. The bumbling head counselor on NBC's "Camp Candy" appears to possess the IQ of a deer tick. He's forever falling out of trees and into lakes; the show's real authority figures are the moppets in his charge who must constantly rush to his rescue. And while we're on the subject of undermining authority, the same network's "Saved by the Bell" (a sitcom about high-school life) features the most, er, unusual teacher ever to pop up in kidvid. She's a grossly pneumatic black who wears skin-tight leather, six-inch earrings and three-inch spikes. If there's a message here, it may be X-rated.

Relief of sorts can still be found on weekday afternoons. ABC's "Afterschool Specials," its Emmy-winning series of one-hour dramas, launched its latest season with the story of a teenage boy coming to grips with his father's mental illness. CBS's own variation, called "Schoolbreak Specials," recently aired the true tale of a California girl who pioneered the passage of a state law protecting student rights. Unfortunately, both ABC and CBS run fewer than a dozen such specials a year, while NBC has abandoned the genre entirely. That's left the daily afternoon airwaves to such syndicated cartoon dreck as "Snorks," "Transformers" and "Teenage Mutant Ninja Turtles."

As some see it, kidvid's most grievous transgression is the advertising the programs interrupt. To watch it is to be engulfed in a torrent of slickly exploitative spiels for the unnecessary and possibly unhealthy: the Barbie Power Wheels convertible and Soda Shoppe, the Li'l Miss Makeup doll, Pocket Rockers tapes, Cinnamon Rolls, Corn Pops, Froot Loops and Fruity Pebbles. There's also more of it than anywhere else on the dial. While commercials in prime time account for about 8-minutes-per hour, the number on some stations on Saturday mornings can add up to nearly twice that figure. Charren, who has been leading the kidvid reform movement for 20 years, offers a less obvious reason for regulation. "Contrary to adults," she says, "children like TV ads. They like to be told what to lobby for. They're uniquely vulnerable, and that's why they have to be protected from overcommercialization."

Limit ads: The bill currently before Congress aims to make a modest start. One of its provisions would limit ad time on weekend children's programming to 10½ minutes per hour. But it is the bill's second provision that has inspired the most hope. This requires the Federal Communications Commission to determine how well every TV station has served the "educational needs" of the young as a condition of license renewal. Exactly how the FCC would measure the quality of that service has yet to be spelled out—and therein lies the bill's last negotiating hurdle before landing on the President's desk. Though the TV industry grudgingly accepts the inevitability of kidvid legislation, some remain troubled over how such a law would work. CBS vice president Judy Price, perhaps the most highly regarded kidvid programmer, sums up their concern when she wonders: "Who's going to be sitting in judgment over what's appropriate for our children? What are the rules and standards?"

Others at the networks maintain that public TV and cable TV are better suited to take up the kidvid slack. That claim is, at best, disingenuous. Yes, the PBS schoolhouse delivers some terrific lessons, but it possesses neither the time, money nor reach to serve the entire young population. And yes, such cable innovations as the Nickelodeon children's channel—currently marking its 10th anniversary—manage to offer something for every age (box). The problem here is one of home economics. Not only are many urban areas still unwired for cable, but the households who can't afford to subscribe are precisely those whose children most need cable's educational uplift. For millions of poor youngsters, the "let them eat cable" philosophy constitutes an invitation to remain intellectually malnourished.

What the activists want and what the kidvid bill would presumably encourage is diversity as well as quality. If the networks can provide newscasts, documentaries, talk shows and mini-series for adults, why not for their most impressionable constituency? Who decided that kids won't sit still for anything that isn't animated? On the other hand, no one wants to see reform become the only norm. The 20 million youngsters who use weekend kidvid to unwind are just as entitled to their video escapism as their elders. Or in the words of CBS's Price: "Saturday mornings should not be a sixth day of school." Wait a minute. Maybe making it precisely that would bring about the most salutary solution of all:

It's another Saturday morning in our town and there's George and Emily heading for the TV again. Let's see what they've turned on. "Miss Manners' Neighborhood" (click) . . . "The Wonderful World of Grains and Greens" (click) . . . "Prepping for the SATs: It's Later Than You Think" (click, click). My, look at that. George and Emily are running straight for the front door! Ah, well. Guess there's plenty of worse places for a child to be on a beautiful morning than outdoors in Grover's Corners.

REVENGE OF THE "VEGETABLE NETWORK"

This is about a 10-year old that started out wrong and ended up a precociously accomplished, nationally celebrated force. When the Nickelodeon children's network premiered on cable in 1979, it quickly drew a flunking grade from its prime demographic targets. Audience research discovered that Nickelodeon's programming tone—earnestly educational, full of what's-good-for-you preachments—was precisely what the kids didn't want. One dubbed it "the green-vegetables network" suitable only for "dorks and doodoo heads." Today Nickelodeon is the biggest thing in children's television, reaching 48 million households with a dawn-to-dusk lineup of more than 50 different shows.

How did Nickelodeon win over all those cynics in training? By giving the kids what they really wanted, which turned out to be their own versions of adult programs. "Don't Just Sit There" is a small-fry talk show and "Hey Dude" a teenage sitcom. "Kids' Court," a mini-knock-off of "People's Court," casts youngsters as judges, jury members and impassioned litigants (typical case: a boy stands accused of reading his sister's diary). "You Can't Do That on Television" is a junior "Laugh-In" featuring adolescent comics and skits that invariably (and inexplicably) conclude with a dousing of green slime. Messiest of all is "Super Sloppy Double Dare," a new game show. Contestants stomp on oatmeal-filled balloons with their legs tied and plummet down slides into giant sundaes.

If most of this seems silly, it's meant to be. "Our mission isn't to teach kids reading," says Nickelodeon president Geraldine Laybourne. "It's to make them feel good about being kids. Today's children are being pressured very severely to grow up too fast. Our goal is to provide a safe haven that accepts them for what they are." Not that the cable network doesn't slip some messages into the froth. When "You Can't Do That on Television" portrays adults as ogreish scolds, explains Laybourne, its viewers receive reassurance that their own nagging parents are anything but unique. Sometimes the solace gets delivered more directly. Comedienne Whoopi Goldberg, who recently made a guest appearance on "Don't Just Sit There," poignantly recalled her childhood despair over being too tall, too skinny and too black. "I felt left out of life," she remarked to a rapt circle of gangly young black girls.

Nickelodeon shapes its programming to the times with extraordinary solicitude. To create a show for the surging numbers of preschoolers in day care, the producers consulted child psychologists and educators, then conducted focus-group sessions with working mothers and their young. The result, called "Eureeka's Castle," deftly uses puppetry and animation to explore problems that newcomers to day care face: handling competition, making friends and dealing with bullies. So what could ABC, CBS and NBC learn from Nickelodeon? "Show more respect for your audience," suggests Laybourne. "Kids today want to be taken seriously." Of course the tricky part is to make the serious stuff fun to watch. After all, not even a network president can afford to be labeled a doodoo head.—Harry F. Waters.●

HOW MUCH IS POLAND WORTH?

● Mr. SIMON. Mr. President, recently, Ira L. Straus, executive director of the Association to Unite the Democracies, an organization based in Washington, issued a statement with a simple title, "How Much Is Poland Worth?"

It outlines why Western nations should respond quickly and vigorously to the Polish challenge.

And, I hope we will be precisely that.

The Financial Times of London had an editorial recently along the same line, which touches on the Polish situation from a little different perspective, but, again, it points out to the West the urgency of the Polish situation.

I urge my colleagues in the House and Senate and their staffs to read these articles. At this point, I ask to insert them in the RECORD.

The articles follow:

HOW MUCH IS POLAND WORTH?

(By Ira Straus)

For 2 months an ever-growing mass of commentators, left and right, European and American, has pleaded with the Bush Administration to do more to help democracy in Poland. For 2 months the Administration has stonewalled.

This week the pleading ended. Senator Paul Simon introduced legislation to up the ante by a factor of ten. It is still a small sum that he proposes—$1 billion over 3 years—but at least the issue is now engaged politically, with power being wielded on both sides. It is no longer a question of begging the Administration to listen to reason, it is a question of debating and voting in Congress.

Partisanship will now enter the picture. It will not be an exercise in pure reason. But the dialectic of political conflict can at least be expected to insure attention to the big questions.

The debate will focus first of all on money: how much can we afford, how much is needed, how much is appropriate. To put it crudely: How much is Poland worth?

It is time to establish criteria for planning and evaluating expenditures on Poland. It is time to get our priorities straight.

First we must figure out how much getting rid of Communism would be worth. Congressman Solarz suggested that it would be worth the entire defense budget. That is the right starting point—the defense budget is a variable dependent primarily on Communism—but the wrong conclusion. On basic investment principles, the end of Communism would be worth far more than that.

The U.S. spends $300 billion a year for defense against Soviet Communism. If $2 trillion would bring Soviet bloc Communism to an end (a peaceful end, leaving democracy rather than something worse in its stead), then it would bring real returns in U.S. defense savings of 15% of principal per annum. That would make it a brilliant investment. So the end of Communism would be worth at least $2 trillion up front to the U.S.

Actually this is a gross underestimation of the value: a government investment need not earn anywhere near a 15% return; and Russia as a friendly democracy would bring America huge positive gains as well as huge negative savings. A more plausible valuation would be $5-10 trillion. But for now let us be cautious and stick with what is crystal clear: that a peaceful, democratic end to Soviet bloc Communism is worth at minimum $2 trillion up front to the U.S.

Since Poland counts for 10% of the Soviet bloc and is a key demonstration case for democratization there, a peaceful democratic end to Communism in Poland is worth at least $200 billion up front to the U.S.

The point is not to spend all $200 billion, but to seek ways to help on a scale commensurate with the need and the opportunity. The more the U.S. can genuinely help, the more fortunate this is for the U.S. The U.S. should not balk at the price tag unless it begins to get within range of $200 billion.

Solidarity asked the West for $10 billion *before* Jaruzelski had agreed to a Solidarity government. That was a modest figure even then, and far too modest today. Yet the Bush Administration has refused to go beyond the $100 million range. This has strained the politeness of Lech Walesa, who has blurted out that if the Solidarity government fails, the blame will in large part be with the Administration.

It is no use pleading bankruptcy. Deficits are bad but Communism is worse. Perhaps the U.S. cannot afford another generation of cold war and defense budgets at $300 billion a year, which is what it will have to pay if the reform governments in the Soviet bloc go under. But it *can* afford to invest up to $200 billion, no matter whether at the cost of higher taxes or a greater budget deficit this year, in making possible a massive reduction in defense needs. With GNP of $4 trillion, the money is there. What the U.S. cannot afford is not to do it.

[From Financial Times, Aug. 31, 1989]

THE POLISH CHALLENGE

Just once or twice in a normal politican's career there comes a challenge that far transcends the small change of politics. A statement is no more than a politican who has the ability to recognize and meet such challenges. So it is now with Poland. As Mr. Tadeusz Mazowiecki comes into office at the head of the first, fragile non-communists government in an eastern bloc country, the challenge is extraordinary—and not for the Poles alone.

Failure of this government would ensure political and economic chaos in Poland, undermine perestroika in the Soviet Union, and greatly increase the likelihood of instability throughout eastern Europe. At best, Western Europe would be threatened with a flood of refugees. Worst, the hope of a peaceful transition from the communist cul de sac would be revealed as an illusion.

Success, by contrast, would go far to heal the wounds inflicted by the Second World War, the anniversary of whose beginning is—with apt symbolism—now upon us. The war began with a cynical deal to divide and subjugate Poland. It would be an occassion for rejoicing if its anniversary were to see secured the ostensible aim of the Western Allies at that time: a free Poland. Now the West now treats Poland would also be seen as both a precedent and an incentive for the rest of eastern Europe.

For Poland to remain free and styable, it will also have to become prosperous. The Government must introduce a programme of economic reform that gives a chance of successful market-oriented economic development. In return, the western allies and particularly western Europe must be prepared to ensure both the required resources and market access.

That programme of reform must be comprehensive; it must be radical; and it must be implemented swiftly. This is the lesson of successful adjustment elsewhere, but it is a lesson of still more relevance to Poland.

WINDOW OF OPPORTUNITY

The conjunction of the Solidarity-led coalition government in Poland with perestroika in the Soviet Union creates a narrow window of opportunity. The most objectionable features of the socialist omelette need to be unscramabled before concerted opposition—within and outside Poland—can even be mounted. Equally, if ever a Government could reasonably expect a honeymoon, this is the one. But it will be short.

The status quo is, in any case, not an option. Poland's economy is sliding downhill. Food deliveries have plummeted and industrial production is in decline. In a land of shortages only cash is abundant, with prices rising by 85 per cent over the first seven months of the year compared with the corresponding period of 1988.

More fundamentally, an economy as distorted as that of Poland cannot be liberalised piecemeal. What is the point of freeing prices if there is no competition? What is the use of liberalising domestic prices if they bear no relation to prices abroad? How can enterpreneurs function if an army of bureaucrats interferes at random in all their decisions?

Economic reform must have three elements: macroeconomic stabilisation; reform of incentives; and privatisation. Each is necessary, but only together will they be sufficient.

The Government must find a way of financing itself without resort to the printing press and, in addition, must reform the currency. Beyond a certain amount, monetary holdings might be swapped into long term indexed bonds or real assets (perhaps housing).

The most important change in incentives is comprehensive trade liberalisation. (To the extent that responsibilities to Comecon remain, they would have to be dealt with separately, just as India continues to conduct barter trade with the Soviet Union.) There should also be reform of personal taxation and a unified market in foreign exchange, along with convertibility on current account.

But this would not be enough. In the socialist state hundreds of thousands of people may interfere in economic life, but nobody benefits directly from the efficient use of productive assets. If improved incentives are to bring corresponding changes in supply, there must be privatisation, with failure by enterprises bringing clear penalties and success equally clear rewards.

The details need to be worked out carefully, but it will be swifter and more sensible to give assets away than attempt to sell them. Those assets could perhaps be divided among the population at large, the workers in individual enterprises and, as compensation for the army of bureaucrats who need to lose their jobs, the members of the *nomenklatura*.

CROSSING THE ABYSS

This is a daunting programme, but no more so than the task. An abyss cannot be crossed in two strides. Even so, the new Polish government will not succeed unaided. Western governments should offer technical assistance and encourage their firms to invest in the Polish economy. Above all, they must open their markets to Polish ex-

ports and offer to eliminate the Polish debt in return for comprehensive reform.

Fortunately, western governments account for almost two-thirds of Poland's debt. They can, therefore, provide the bulk of the required relief without "bailing out the banks." Small-minded people will bleat about the precedent of debt forgiveness. The Brady plan has, however, already recognised the principle of debt reduction. More important, a unique and fragile opportunity to further the principal strategic objective of the western alliance of the past 45 years is no occasion to emphasise petty principles or count petty cash.

More important is how such a programme should be monitored. The International Monetary Fund is inevitably involved as a source of new funds (along with the World Bank). But the role of western Europe suggests a corresponding role for the European Community. At the very least the EC will play a decisive role as Poland's principal western trading partner, while the European Free Trade Association could become a new home for a reformed Polish economy.

There is another institution into which Poland should also be invited: the Organisation for Economic Cooperation and Development, the progeny of the organisation that oversaw the Marshall Plan. What Poland needs, after all, is no more than the policies and the resources denied it during the postwar recovery of western Europe.

This is the heart of the moral case for active and generous western involvement. Not that the case is moral alone, since the practical consequences of failure are so grave. But none of the great western powers can be unaware of their responsibility for Poland's present plight.

To create the conditions for successful economic development in Poland will take some years. To reap the fruits will take longer still. The new Government is doomed to be bold, but it will need generous help if it is to succeed. Poland's entire debt is, however, only $39 bn and its gross national product less than $80 bn. Against this, the combined GNP of the members of the western alliance is now some $9 trillion. It is not a matter of not being able to afford to help. It is a matter of not being able to afford not to.●

EXECUTIVE SESSION

EXECUTIVE CALENDAR

Mr. MITCHELL. Mr. President, I ask unanimous consent that the Senate proceed to executive session to consider the following nomination:

Calendar No. 488—Edwin L. Nelson, to be U.S. district judge for the Northern District of Alabama; and

Calendar No. 490—Susan Webber Wright, to be U.S. district judge for the Eastern and Western Districts of Arkansas.

I further ask unanimous consent that the nominees be confirmed, en bloc, that any statements appear in the RECORD as if read, that the motions to reconsider be laid upon the table, en bloc, that the President be immediately notified of the Senate's action, and that the Senate return to legislative session.

The PRESIDING OFFICER. Without objection, it is so ordered.

The nominations considered en bloc and confirmed en bloc are as follows:

THE JUDICIARY

Edwin L. Nelson, of Alabama, to be U.S. district judge for the Northern District of Alabama; and

Susan Webber Wright, of Arkansas, to be U.S. district judge for the Eastern and Western Districts of Arkansas.

LEGISLATIVE SESSION

The PRESIDING OFFICER. Under the previous order, the Senate will now return to the consideration of legislative business.

ORDER FOR STAR PRINT

Mr. MITCHELL. Mr. President, I ask unanimous consent that the annual report of the Senate Intelligence Committee, Senate Report 101-219, be star printed to reflect the changes I now send to the desk.

The PRESIDING OFFICER. Without objection, it is so ordered.

PROVIDING FOR A JOINT SESSION OF THE TWO HOUSES TO RECEIVE A MESSAGE FROM THE PRESIDENT OF THE UNITED STATES

Mr. MITCHELL. Mr. President, I ask unanimous consent that the Senate proceed to the immediate consideration of House Concurent Resolution 242, a concurrent resolution providing for a joint session of Congress on January 31, 1990, just received from the House.

The PRESIDING OFFICER. The clerk will report.

The assistant legislative clerk read as follows:

H. CON. RES. 242

Resolved by the House of Representatives (the Senate concurring), That the two Houses of Congress assemble in the Hall of the House of Representatives on Wednesday, January 31, 1990, at 9 o'clock post meridiem, for the purpose of receiving such communication as the President of the United States shall be pleased to make to them.

The PRESIDING OFFICER. Is there objection to the request of the majority leader?

There being no objection, the Senate proceeded to consider the concurrent resolution.

The PRESIDING OFFICER. The question is on agreeing to the concurrent resolution.

The concurrent resolution (H. Con. Res. 242) was agreed to.

Mr. MITCHELL. Mr. President, I move to reconsider the vote by which the concurent resolution was agreed to.

Mr. DOLE. I move to lay that motion on the table.

The motion to lay on the table was agreed to.

ORDERS FOR WEDNESDAY, JANUARY 24, 1990

RECESS UNTIL 9:30 AND MORNING BUSINESS

Mr. MITCHELL. Mr. President, I ask unanimous consent that when the Senate completes its business today it stand in recess until 9:30 a.m. tomorrow, Wednesday, January 24, and that following the time for the two leaders there be a period for morning business until 10 a.m., with Senators permitted to speak therein for up to 5 minutes each.

The PRESIDING OFFICER. Without objection, it is so ordered.

PROGRAM

Mr. MITCHELL, Mr. President, at 10 a.m. tomorrow with Senate will resume debate on S. 1630, the clean air bill.

Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The absence of a quorum has been suggested. The clerk will call the roll.

The assistant legislative clerk proceeded to call the roll.

Mr. MITCHELL. I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

UNANIMOUS-CONSENT AGREEMENT—VETO MESSAGE ON H.R. 2712

Mr. MITCHELL. Mr. President, I ask unanimous consent that when the Senate receives from the House the veto message on H.R. 2712, the Chinese Student Immigration Status Act, it be immediately spread upon the Journal, the reading be waived and the message be laid aside until called up by the majority leader after consultation with the Republican leader.

I further ask unanimous consent that when the Senate considers this veto message it be considered under the following time limitation: 4 hours for debate to be equally divided between Senators KENNEDY and SIMPSON, or their designees, and that when all time is used or yielded back the Senate proceed to vote, without any intervening action, on whether or not the President's veto shall be sustained.

The PRESIDING OFFICER. Is there objection?

Mr. DOLE. Reserving the right to object, and I shall not object, I think it should be reflected on the RECORD that we hope that vote will come early afternoon. Is that the hope of the majority leader?

Mr. MITCHELL. Yes, Mr. President. I have discussed it with the distinguished Republican leader. It appears to be most convenient for Members on both sides to commence the debate on Thursday morning and to complete it

Thursday afternoon and have the vote then. We will spend overnight and in the morning attempting to determine the convenience of the largest number of Members on both sides, with Senators traveling both to and from the Nation's Capital on that day.

Mr. DOLE. I thank the majority leader. I have no objection.

The PRESIDING OFFICER. Without objection, it is so ordered.

RECESS UNTIL 9:30 A.M. TOMORROW

Mr. MITCHELL. Mr. President, if the distinguished Republican leader has no further business, and if no Senator is seeking recognition, I now ask unanimous consent that the Senate stand in recess under the previous order until 9:30 a.m. on Wednesday, January 24.

There being no objection, the Senate, at 6:47 p.m., recessed until Wednesday, January 24, 1990, at 9:30 a.m.

NOMINATIONS

Executive nominations received by the Senate January 23, 1990:

DEPARTMENT OF STATE

EVERETT ELLIS BRIGGS, OF NEW HAMPSHIRE, A CAREER MEMBER OF THE SENIOR FOREIGN SERVICE, CLASS OF CAREER MINISTER, TO BE AMBASSADOR EXTRAORDINARY AND PLENIPOTENTIARY OF THE UNITED STATES OF AMERICA TO THE REPUBLIC OF PORTUGAL.

PAUL C. LAMBERT, OF NEW YORK, TO BE AMBASSADOR EXTRAORDINARY AND PLENIPOTENTIARY OF THE UNITED STATES OF AMERICA TO THE REPUBLIC OF ECUADOR.

EDWARD MORGAN ROWELL, OF CALIFORNIA, A CAREER MEMBER OF THE SENIOR FOREIGN SERVICE, CLASS OF MINISTER-COUNSELOR, TO BE AMBASSADOR EXTRAORDINARY AND PLENIPOTENTIARY OF THE UNITED STATES OF AMERICA TO LUXEMBOURG.

U.S. ARMS CONTROL AND DISARMAMENT AGENCY

SUSAN JANE KOCH, OF THE DISTRICT OF COLUMBIA, TO BE AN ASSISTANT DIRECTOR OF THE U.S. ARMS CONTROL AND DISARMAMENT AGENCY, VICE WILLIAM H. FITE, RESIGNED.

DEPARTMENT OF DEFENSE

DOUGLAS ALAN BROOK, OF VIRGINIA, TO BE AN ASSISTANT SECRETARY OF THE ARMY, VICE KEN KRAMER, RESIGNED.

COLIN RILEY MCMILLAN, OF NEW MEXICO, TO BE AN ASSISTANT SECRETARY OF DEFENSE, VICE JACK KATZEN, RESIGNED.

ENRIQUE MENDEZ, JR., OF PUERTO RICO, TO BE AN ASSISTANT SECRETARY OF DEFENSE, VICE WILLIAM E. MAYER, RESIGNED.

DEPARTMENT OF JUSTICE

THOMAS W. CORBETT, JR., OF PENNSYLVANIA, TO BE U.S. ATTORNEY FOR THE WESTERN DISTRICT OF PENNSYLVANIA FOR THE TERM OF 4 YEARS, VICE J. ALAN JOHNSON, RESIGNED.

U.S. SENTENCING COMMISSION

JULIE E. CARNES, OF GEORGIA, TO BE A MEMBER OF THE UNITED STATES SENTENCING COMMISSION FOR A TERM EXPIRING OCTOBER 31, 1995, VICE PAUL H. ROBINSON, RESIGNED.

DEPARTMENT OF AGRICULTURE

GARY C. BYRNE, OF CALIFORNIA, TO BE ADMINISTRATOR OF THE RURAL ELECTRIFICATION ADMINISTRATION FOR A TERM OF 10 YEARS, VICE HAROLD V. HUNTER, RESIGNED.

DPEARTMENT OF COMMERCE

L. JOYCE HAMPERS, OF MASSACHUSETTS, TO BE AN ASSISTANT SECRETARY OF COMMERCE, VICE ORSON G. SWINDLE III, RESIGNED.

BARBARA EVERITT BRYANT, OF MICHIGAN, TO BE DIRECTOR OF THE CENSUS, VICE JOHN G. KEANE, RESIGNED, TO WHICH POSITION SHE WAS APPOINTED DURING THE LAST RECESS OF THE SENATE.

DEPARTMENT OF HEALTH AND HUMAN SERVICES

ANTONIA COELLO NOVELLO, OF THE DISTRICT OF COLUMBIA, TO BE SURGEON GENERAL OF THE PUBLIC HEALTH SERVICE FOR A TERM OF 4 YEARS, VICE C. EVERETT KOOP, RESIGNED.

DEPARTMENT OF VETERANS AFFAIRS

D'WAYNE GRAY, OF VIRGINIA TO BE CHIEF BENEFITS DIRECTOR, DEPARTMENT OF VETERANS AFFAIRS (NEW POSITION).

BOARD FOR INTERNATIONAL BROADCASTING

MALCOLM S. FORBES, JR., OF NEW JERSEY, TO BE A MEMBER OF THE BOARD FOR INTERNATIONAL BROADCASTING FOR A TERM EXPIRING APRIL 28, 1992 (REAPPOINTMENT).

THE JUDICIARY

ANNICE M. WAGNER, OF THE DISTRICT OF COLUMBIA, TO BE AN ASSOCIATE JUDGE OF THE DISTRICT OF COLUMBIA COURT OF APPEALS FOR THE TERM OF 15 YEARS, VICE JULIA P. COOPER MACK, RESIGNED.

EXECUTIVE OFFICE OF THE PRESIDENT

THE FOLLOWING-NAMED PERSONS TO BE ASSOCIATE DIRECTORS OF THE OFFICE OF SCIENCE AND TECHNOLOGY POLICY (NEW POSITIONS):

WILLIAM D. PHILLIPS, OF MISSOURI.

EUGENE WONG, OF CALIFORNIA.

FEDERAL COMMUNICATIONS COMMISSION

ERVIN S. DUGGAN, OF SOUTH CAROLINA, TO BE A MEMBER OF THE FEDERAL COMMUNICATIONS COMMISSION FOR A TERM OF 5 YEARS FROM JULY 1, 1989, VICE PATRICIA DIAZ DENNIS, RESIGNED.

FEDERAL MARITIME COMMISSION

DONALD ROBERT QUARTEL, JR., OF FLORIDA, TO BE A FEDERAL MARITIME COMMISSIONER FOR THE TERM EXPIRING JUNE 30, 1994, VICE EDWARD J. PHILBIN, TERM EXPIRED.

FEDERAL RESERVE SYSTEM

DAVID W. MULLINS, JR., OF ARKANSAS, TO BE A MEMBER OF THE BOARD OF GOVERNORS OF THE FEDERAL RESERVE SYSTEM FOR THE UNEXPIRED TERM OF FOURTEEN YEARS FROM FEBRUARY 1, 1982, VICE H. ROBERT HELLER, RESIGNED.

EDWARD W. KELLEY, JR., OF TEXAS, TO BE A MEMBER OF THE BOARD OF GOVERNORS OF THE FED-ERAL RESERVE SYSTEM FOR A TERM OF 14 YEARS FROM FEBRUARY 1, 1990 (REAPPOINTMENT).

MERIT SYSTEMS PROTECTION BOARD

JESSICA L. PARKS, OF GEORGIA, TO BE A MEMBER OF THE MERIT SYSTEMS PROTECTION BOARD FOR THE REMAINDER OF THE TERM EXPIRING MARCH 1, 1995, VICE SAMUEL W. BOGLEY.

NATIONAL COUNCIL ON DISABILITY

THE FOLLOWING-NAMED PERSONS TO BE MEMBERS OF THE NATIONAL COUNCIL ON DISABILITY FOR THE TERMS INDICATED:

FOR THE REMAINDER OF THE TERM EXPIRING SEPTEMBER 17, 1991:

MARY MATTHEWS RAETHER, OF VIRGINIA, VICE PHYLLIS D. ZLOTNICK, TERM EXPIRED.

FOR A TERM EXPIRING SEPTEMBER 17, 1992:

SANDRA SWIFT PARRINO, OF NEW YORK (REAPPOINTMENT).

ALVIS KENT WALDREP, JR., OF TEXAS (REAPPOINTMENT).

ANTHONY HURLBUTT FLACK, OF CONNECTICUT, TO BE A MEMBER OF THE NATIONAL COUNCIL ON DISABILITY FOR A TERM EXPIRING SEPTEMBER 17, 1991, VICE JOHN F. MILLS.

NATIONAL LABOR RELATIONS BOARD

DENNIS M. DEVANEY, OF MARYLAND, TO BE A MEMBER OF THE NATIONAL LABOR RELATIONS BOARD FOR THE TERM OF 5 YEARS EXPIRING DECEMBER 16, 1994 (REAPPOINTMENT), TO WHICH POSITIONS HE WAS APPOINTED DURING THE LAST RECESS OF THE SENATE.

CLIFFORD R. OVIATT, JR., OF VIRGINIA, TO BE A MEMBER OF THE NATIONAL LABOR RELATIONS BOARD FOR THE REMAINDER OF THE TERM EXPIRING AUGUST 27, 1993, VICE WILFORD W. JOHANSEN, RESIGNED, TO WHICH POSITION HE WAS APPOINTED DURING THE LAST RECESS OF THE SENATE.

NATIONAL RAILROAD PASSENGER CORPORATION

TOMMY G. THOMPSON, OF WISCONSIN, TO BE A MEMBER OF THE BOARD OF DIRECTORS OF THE NATIONAL RAILROAD PASSENGER CORPORATION FOR A TERM OF 4 YEARS, VICE ROBERT D. ORR, RESIGNED.

NATIONAL TRANSPORTATION SAFETY BOARD

JAMES L. KOLSTAD, OF COLORADO, TO BE CHAIRMAN OF THE NATIONAL TRANSPORTATION SAFETY BOARD FOR A TERM OF 2 YEARS, VICE JAMES EUGENE BURNETT, JR., TERM EXPIRED.

OCCUPATIONAL SAFETY AND HEALTH REVIEW COMMISSION

VELMA MONTOYA, OF CALIFORNIA, TO BE A MEMBER OF THE OCCUPATIONAL SAFETY AND HEALTH REVIEW COMMISSION FOR THE REMAINDER OF THE TERM EXPIRING APRIL 27, 1991, VICE ROBERT E. RADER, JR., RESIGNED.

THE JUDICIARY

RONALD M. HOLDAWAY, OF WYOMING, TO BE AN ASSOCIATE JUDGE OF THE UNITED STATES COURT OF VETERANS APPEALS FOR THE TERM OF 15 YEARS (NEW POSITION).

FOREIGN SERVICE

THE FOLLOWING-NAMED CAREER MEMBERS OF THE SENIOR FOREIGN SERVICE OF THE DEPARTMENT OF AGRICULTURE FOR PROMOTION IN THE SENIOR FOREIGN SERVICE TO THE CLASSES INDICATED:

CAREER MEMBERS OF THE SENIOR FOREIGN SERVICE OF THE UNITED STATES OF AMERICA, CLASS OF CAREER MINISTER:

ROLLAND E. ANDERSON, JR., OF VIRGINIA.

CHARLES J. O'MARA, OF MARYLAND.

THE FOLLOWING-NAMED CAREER MEMBERS OF THE FOREIGN SERVICE OF THE DEPARTMENT OF AGRICULTURE FOR PROMOTION INTO THE SENIOR FOREIGN SERVICE AS INDICATED:

CAREER MEMBERS OF THE SENIOR FOREIGN SERVICE OF THE UNITED STATES OF AMERICA, CLASS OF COUNSELOR:

CHRISTOPHER E. GOLDTHWAIT, OF NEW YORK.

MATTIE R. SHARPLESS, OF NORTH CAROLINA.

PUBLIC HEALTH SERVICE

THE FOLLOWING CANDIDATES FOR PERSONNEL ACTION IN THE REGULAR CORPS OF THE PUBLIC HEALTH SERVICE SUBJECT TO QUALIFICATIONS THEREFOR AS PROVIDED BY LAW AND REGULATIONS:

1. FOR APPOINTMENT:

To be medical director

KENNETH J. BART
HENRY FALK
PETER GREENWALD
HENRY METZGER
ABNER L. NOTKINS

To be senior surgeon

J. MICHAEL MCGINNIS
EUGENE R. PASSAMANI
STEPHEN J. ROJCEWICZ, JR.

To be surgeon

RUTH L. BERKELMAN
MICHAEL R. BOYD
CLAIRE BROOME
STEPHEN L. COCHI
MARY C. DUFOUR
STEPHEN W. HEATH
NORRIS S. LEWIS
STEVEN M. PAUL
MARC D. REYNOLDS

To be senior assistant surgeon

ANDREW M. FRIEDE
JAMES M. GALLOWAY
THOMAS R. NAVIN
PATRICK W. O'CARROLL
GARY F. ROSENBERG
JOSEPH E. SNIEZEK

To be dental surgeon

WILLIAM W. SAVAGE, JR.

To be senior assistant dental surgeon

STEVEN J. BAUNE
JOHN S. BETZ
DALE F. BURKE
MILTON J. EISIMINGER
ANDREA G. FEIGHT
DOUGLAS D. GORTHY
SHAWNEEQUA M. HARRIS
JAN T. JOSEPHSON
LAWRENCE B. LANE
JEFFREY C. MABRY
RAY M. MCCULLOUGH
THOMAS R. PALANDECH
MIGUEL RICO
EUGENE K. ROBBINS
CAROL E. SHERMAN
JEANINE R. TUCKER
WALTON L. VANHOOSE
HORACE M. WHITT
RUSSELL C. WILLIAMS, JR.

To be nurse officer

LYNN E. MCCOURT

To be senior assistant nurse officer

ARLENE B. BARTH
WERNER H. BECKERHOFF, JR.
PAULINE A. CAHALAN
GAYLE N. CLARK
ROBIN R. DANIELZUK
KAREN J. DECANIO
MARGARET J. DICLEMENTE
ALAN D. GOLDSTEIN
JOYCE E. HIGGINS
PENNY M. HLAVNA
BYRON N. HOMER, JR.
ROY C. LOPEZ
CLEOPHAS LYONS, SR.
ELLEN P. MADIGAN
REBECCA P. MANLEY
DANIEL J. MCELROY
RUSS P. METLER
RAYLENE PERN
ANA M. PUENTE
DIANE P. RUBY
ABRAHAM SIMMONS
PELAGIE C. SNESRUD
RUTH F. WALKER

To be assistant nurse officer

FERN S. DETSOI
THOMAS J. EDWARDS
KIMBERLAE A. HOLLEY
BARBARA A. ISAACS
JANE F. RUIZ
JOCELYN W. WYNNE

To be engineer officer

JOHN M. DEMENT
CURTIS F. FEHN
RICHARD J. WAXWEILER

To be senior assistant engineer officer

LEO M. BLADE
JOSE F. CUZME
LARRY W. STRAIN
KELLY R. TITENSOR
MARVIN L. WEBER
ROBERT C. WILLIAMS

To be assistant engineer officer

TODD M. SCOFIELD

To be senior scientist

MARILYN A. FINGERHUT

To be scientist

EVE K. MOSCICKI

To be senior assistant scientist

DAVID L. ASHLEY
DAVID F. WILLIAMSON
RANDY L. TUBBS

To be sanitarian

PAUL T. DAY
THEODORE J. MEINHARDT

To be senior assistant sanitarian

DANIEL ALMAGUER
KEVIN TONAT
LYNN E. JENKINS
L.J. DAVID WALLACE III
KENNETH J. SECORD
PETER P. WALLIS
CHARLES D. STANLEY

To be senior assistant veterinary officer

RICHARD F. CULLISON
CHERI A. REID-QUINN
MARY L. MARTIN

To be pharmacist

STEVEN R. MOORE

To be senior assistant pharmacist

CHERYL L. AUNE
MARLA L. KENT
DAVID C. BOZZI
MICHAEL R. LILLA
JAMES L. BUTLER
JAMES W. MITCHELL
DAVID L. CHRISTENSEN
JANET M. MORGAN
LULA D. FISHCHBACH
WILLIAM D. SAGE
BEN GLIDEWELL
MARTIN L. SMITH
SCOTT W. HAYES
JAMES P. STABLES
JAMES D. HAZELWOOD
JAMES P. STUMPFF
IRENE J. HUMPHREY
SHEILA E. VEIKUNE
JAMES C. JORDAN
CYNTHIA A. WAY

To be assistant pharmacist

REBECCA J. LIDEL

To be senior assistant dietitian

JANICE M. HUY
JAMES M. PEARCE
JOYANNE P. MURPHY

To be senior assistant therapist

MARK W. DARDIS
JOSEPH HUNTER
ELAINE A. DENNIS

To be assistant therapist

KAREN N. LOHMANN

To be senior assistant health services officer

DUANE R. BECKWITH
ANN G. MAHONY
MARY B. COOPER
LURA S. ORAVEC
ROCHELLE E. CURTIS
MAX A. TAHSUDA
CHERYL A. LAPOINTE
THOMAS R. TAHSUDA
STEVEN R. LOPEX
HENRY A. WALDEN, JR.

NATIONAL OCEANIC AND ATMOSPHERIC ADMINISTRATION

SUBJECT TO QUALIFICATIONS PROVIDED BY LAW, THE FOLLOWING FOR PERMANENT APPOINTMENT TO THE GRADES INDICATED IN THE NATIONAL OCEANIC AND ATMOSPHERIC ADMINISTRATION.

To be rear admiral

JAMES A. YEAGER

To be rear admiral (lower half)

RAY E. MOSES
RAYMOND L. SPEER
SIGMUND R. PETERSEN

To be captain

MELVYN C. GRUNTHAL
ARTHUR N. FLIOR
MICHARL A. MCCALLISTER
FREDERICK J. JONES
DONALD L. SULOFF
MARTIN R. MULHERN
ANDREW N. BODNAR, JR.
ALBERT E. THEBERGE, JR.
NICHOLAS A. PRAHL

To be commander

GEORGE C. PLAYER III
EDWARD B. CHRISTMAN
PAMELA R. CHELGREN-KOTERBA
DENNIS J. SIGRIST
THOMAS L. MEYER
TERRY M. LAYDON
ROBERT J. PAWLOWSKI
GREOGRY V. SEGUR
DOUGLAS G. HENNICK
EDWARD E. SEYMOUR, JR.
DAVID C. MCCONAGHY
GARTH W. STROBLE
WILLIAM J. HARRIGAN
ANDREW M. SNELLA

To be lieutenant commander

NEAL G. MILLETT
JOHN W. BLACKWELL
CHARLES E. GROSS
SAMUEL P. DE BOW, JR.
MICHAEL R. JOHNSON
MARK S. FINKE
BRIAN P. HAYDEN
ROBERT X. MCCANN, JR.
DEREK C. SUTTON
TIMOTHY D. RULON
JOHN D. WILDER
JAMES M. HERKELRATH
JOHN C. CLARY III
MICHAEL K. MALLETTER
MILES M. CROOM
ELIZABETH A. WHITE
LEEANNE ROBERTS

To be lieutenant

MICHAEL F. CHOLKO
DAVID W. MOELLER
RANDAL J. SHRUELL
GREGG LAMONTAGNE
DUANE A. TIMMONS
LEE M. COHEN
JOHN E. LOWELL, JR.
MARK H. PICKETT
DAVID M. MATTENS
JOHN S. GRIFFIN
JON E. RIX
THOMAS W. HURST
CLIFFORD C. WILSON
MARK W. HULSBECK
WAYNE E. MITCHELL
CHRISTOPHER A. MEBANE
TIMONTHY J. CLANCY

To be lieutenant (junior grade)

GERD F. GLANG
CHRISTOPHER S. MOORE
RAYMOND C. SLAGLE
ANDREW L. BEAVER
EDWARD R. CASSANO
STACY L. BIRK-RISHEIM
PHILIP J. MEIS
ANGELA M. LUIS
DEWAYNE J. NODINE
JEFFREY A. FERGUSON
DANIEL W. CHENG
MICHAEL R. LEMON
TINA L. BERTUCCI
PHILIP S. HILL
BRENT M. BERNARD
WILLIAM B. KEARSE
MARK S. LARSEN
THOMAS A. NIICHEL
JAMES S. VERLAQUE
STEVEN P. LABOSSIERE
SCOTT K. SULLIVAN
DAVID K. ZIMMERMAN
DANA S. WILKES
JOHN E. HERRING
DONNAL M. JUROSKY
PATRICK I. WADDINGTON
CYNTHIA N. CUDABACK
ROBERT S. PAPE
GARY R. MAY
LAURIE A. RAFFETTO
JOSEPH S. MCDOWELL
THOMAS R. WADDINGTON

To be ensign

TIMOTHY T. MADSEN
ANDREA M. HRUSOVSKY
MATTHEW J. HAWKINS
RICHARD A. FLETCHER
HARRIE W. BONNAH II

CONFIRMATIONS

Executive nominations confirmed by the Senate January 23, 1990:

THE JUDICIARY

EDWIN L. NELSON, OF ALABAMA, TO BE UNITED STATES DISTRICT JUDGE FOR THE NORTHERN DISTRICT OF ALABAMA.

SUSAN WEBBER WRIGHT, OF ARKANSAS, TO BE U.S. DISTRICT JUDGE FOR THE EASTERN AND WESTERN DISTRICTS OF ARKANSAS.

WITHDRAWAL

Executive message received January 23, 1990, withdrawing from further Senate consideration the following nomination:

MERIT SYSTEMS PROTECTION BOARD

SAMUEL W. BOGLEY, OF MARYLAND, TO BE A MEMBER OF THE MERIT SYSTEMS PROTECTION BOARD FOR THE TERM OF 7 YEARS EXPIRING MARCH 1, 1995, VICE DENNIS M. DEVANEY, RESIGNED, WHICH WAS SENT TO THE SENATE ON JANUARY 3, 1989.

EXTENSIONS OF REMARKS

ELECTRIC VEHICLE TECHNOLOGY DEVELOPMENT AND DEMONSTRATION ACT OF 1990

HON. GEORGE E. BROWN, JR.

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 23, 1990

Mr. BROWN of California. Mr. Speaker, I am pleased to introduce today the Electric Vehicle Technology Development and Demonstration Act of 1990. This measure will help our Nation to achieve very important—and heretofore mutually exclusive—goals: Clean air and convenient transportation. Joining me today as original cosponsors are Representatives VIC FAZIO, JERRY LEWIS, CARLOS MOORHEAD, TOM CAMPBELL, RON PACKARD, HENRY WAXMAN, and JIM BATES.

The scope of the problem is clear. We know that over 100 urban areas do not meet existing Clean Air Act standards for ozone and that more than 40 areas fail to meet standards for carbon dioxide. We know that programs directed at reducing emissions from mobile source will be central to air quality restoration efforts in these areas.

Electric vehicles must be part of any clean air solution because they may be the single most effective means of reducing transportation sector emissions in nonattainment areas. A recent report by the California Air Resources Board compared emissions of gasoline and alternately fueled vehicles, finding that even when the incremental emissions resulting from increased electrical generation are considered, electric vehicles can reduce up to 98 percent of emissions of reactive hydrocarbons, 89 percent of nitrogen oxides and 99 percent of carbon monoxide compared to gasoline powered vehicles. When the Air Resources Board compared other alternative fuels with electric vehicles, such vehicles still came out significantly ahead. For example, in carbon monoxide emissions, electric vehicles are 124 times better than methanol, 174 times better than liquefied petroleum gas and 11 times better than compressed natural gas. Replacement of gasoline powered vehicles with electric vehicles also offers the potential for actually reducing carbon dioxide emissions as well.

In fact one study has concluded that replacement of just 1 percent of the vehicles registered in the United States with electrically powered vehicles could eliminate 160,000 tons of pollutants emitted per year.

Electric vehicles have another important benefit: energy security. More than 60 percent of U.S. oil consumption is attributable to the transportation sector. One successful way of reducing oil imports is to use electric vehicles. Substitution of 1 percent of the vehicles registered today would save over 60,000 barrels of oil per day, and the U.S. balance of trade deficit would be reduced by $1 billion.

Unfortunately, electric vehicles have not always been given the prominent role they deserve in the national policy debate about alternative vehicle fuels. While there may be a number of reasons for this—some technological, some economic—the real issue facing Congress today is how to move electric vehicles from the drawing boards onto our Nation's roads, particularly in those urban areas where they can contribute significantly to air quality improvement efforts. Even a combination of regulatory mandates to use alternative fuels may not resolve the obstacles which combine to thwart the development of an electric vehicle market in time to make EV's a viable option by the middle of this decade.

This legislation is a natural expansion of the effort to encourage development of electric vehicle technologies that we called for in the electric and Hybrid Vehicle Research, Development and Demonstration Act in 1976. In 1976, we identified electric vehicles as being an important means of reducing our national use of petroleum products. We recognized that our dependence on foreign petroleum products was a threat to our national security as well as to our balance of payments. We saw introduction of electric and hybrid vehicles—particularly in urban areas—as an effective means of reducing our use of imported petroleum. We observed that electric vehicles "do not emit any significant pollutants or noise," and for these reasons we set forth a program aimed at facilitating the development of and removing barriers to the use of electric and hybrid vehicles and to promote their substitution for gasoline- and diesel-powered vehicles in appropriate applications.

The ambitious objectives of the act have yet to be fully realized, even though the benefits of electric vehicles from both an environmental and an energy security standpoint are unsurpassed by any other alternative vehicle fuel. Part of the reason that we have not achieved the goals of the 1976 Act is due to the decreased pressure for developing alternatives to petroleum-based fuels resulting from the drop in world oil prices. Nor has technology, particularly in the area of electric storage batteries, proceeded at the pace we expected in 1976.

The increasing environmental costs of continued near-exclusive reliance on gasoline are exerting renewed pressure for the development of alternative fuels. We have an important opportunity today to act.

The sponsors of this legislation are well aware that there are also real technological barriers to be overcome. Electrical drive trains must be improved, and the range and performance of current generation of electric vehicles must be enhanced if full consumer acceptance is to be achieved. Battery research and development efforts, both federally supported programs and those of private industry, must continue and intensify.

But we do not have the luxury of waiting until electric vehicle battery technologies are perfected to move forward with a commercialization program. If we do, electric vehicles simply will not be available in the mid-1990's timeframe contemplated by the alternative fuels programs now under consideration. The technology available today is adequate for certain applications, primarily for fleet use in urban areas. Getting that technology on the road and creating niche markets for EV's offers us an effective means to pull private sector research and development funds into battery programs at a far greater pace.

Our legislation proposes a Federal cost-sharing program to stimulate market demand for electric vehicles by cutting the high per vehicle purchase cost of initial models off the production line. Our goal is twofold: To establish a domestic production capability and to drive down the cost of electric vehicles by achieving favorable economies of scale through greater production to the point at which EV costs will be at least comparable, on a life-cycle basis, with conventionally-fueled vehicles.

The program will be oriented to areas not in compliance with Clean Air Act standards. The Federal Government's role would be limited to competitively selecting a manufacturer or manufacturers and specifying minimum performance standards for electric vehicles along with methods of integrating advances in battery technology into the initial production models. The private sector would be responsible for finding purchasers for the electric vehicles to be supported. The program will also generate data needed by consumers to assess the usefulness of electric vehicles for particular applications.

Mr. Speaker, I believe this legislation is a way to bring electric vehicle technologies to their rightful place in the forefront of national efforts to increase the use of alternative vehicle fuels. It offers a means to introduce the marketplace to the benefits of electric vehicles through a program that will attack directly consumer reluctance attributable to high initial vehicle costs. I hope that our colleagues will support our proposal and that we will be able to move forward promptly with its consideration during the current session. A summary of the bill is provided below:

SECTION-BY-SECTION ANALYSIS OF THE ELECTRIC VEHICLE DEVELOPMENT AND DEMONSTRATION ACT OF 1990

Section 1: Short Title.

Section 2: Findings.

The section recites the important benefits of widespread use of electric vehicles, including improving air quality, permitting the efficient utilization of electrical generating capacity, enhancing national energy security and encouraging electric vehicle production in the United States. The findings also acknowledge the barrier to electric vehicle commercialization caused by the high

● This "bullet" symbol identifies statements or insertions which are not spoken by a Member of the Senate on the floor.
Matter set in this typeface indicates words inserted or appended, rather than spoken, by a Member of the House on the floor.

initial cost to users or owners. In view of the benefits of electric vehicles to national energy and environmental policy, it is in the public interest for the federal government to assist in the development, demonstration and commercialization of electric vehicles.

Section 3: Identification of Nonattainment Areas; Eligible Nonattainment Areas.

A two-step procedure is created to provide for the designation of areas in which electric vehicles should be introduced. First, within 30 days of enactment of the legislation, the Administrator of the Environmental Protection Agency would identify those nonattainment areas with the highest number of nonattainment days where mobile sources are a significant cause of the nonattainment. Subsequently, within 30 days after being notified of the identification of these nonattainment areas by the EPA Administrator, the Secretary of Energy will designate which of these nonattainment areas will be eligible areas for electric vehicle sales ("eligible nonattainment areas") under the program.

Section 4: Application.

Within 120 days of the date of enactment, the Secretary of Energy must implement a program to request applications from manufacturers to manufacture, distribute, sell, warranty and service electric vehicles in one or more eligible nonattainment areas. If the responses received to the initial request for applications are deemed inadequate, additional requests for applications may be made.

The request for applications would require responding manufacturers to identify the sales area, quantity of vehicles proposed, distribution means, the type of vehicles to be produced, along with specifications and performance characteristics, price, life cycle cost information and such other information as the Secretary may require. It is expected that requirements for minimum performance standards would be developed by the Department of Energy and included in the request for applications.

Section 5: Selection of Manufacturers.

Within 300 days of enactment, and in consultation with the Secretaries of Commerce and Transportation and the EPA Administrator, the Secretary of Energy is to select one or more manufacturers to sell electric vehicles. Criteria on which the Secretary's selection would be based are set forth, including the capability of the manufacturer to provide the vehicles, the suitability of the vehicles for cargo or passenger applications, the technical viability of the technology proposed, the ability of the manufacturer to achieve life cycle cost reductions, the price proposed for the vehicle, and other criteria specified by the Secretary.

Section 6: Discount to Purchaser.

This section sets forth the mechanism for federal cost-sharing for purchases of electric vehicles. The amount of federal cost-sharing is expressed as a "discount" that may be offered to the ultimate purchaser and will consequently be reflected in the price the ultimate purchase pays for the vehicle. The discount will be equal to either (1) the amount by which the estimated life cycle cost of the electric vehicle exceeds the life cycle cost of a comparable conventionally fueled vehicle, or (2) the amount by which the selling price to be charged by the manufacturer exceeds the suggested manufacturer's retail price of a comparable conventionally fueled vehicle. (Such discount not to exceed 50% of the manufacturers' selling price.)

Cost-sharing payments will be made directly to the manufacturer, and passed through to the ultimate purchaser in the form of a reduced purchase price for the vehicle. To receive payment, manufacturers will be required to certify to the Secretary (1) that the discount will not lower the manufacturer's selling price of the electric vehicle below a manufacturer's suggested retail price of a comparable vehicle; and (2) that the electric vehicle will be used in the eligible nonattainment area in which the vehicle is purchased.

Once initiated, the commercialization program will be an ongoing program, with cost sharing to be available to the selected manufacturer or manufacturers for five fiscal years, unless the Secretary of Energy determines that a manufacturer is not performing under applicable contractual terms and conditions, in which case further assistance may be withheld.

Section 7: Definitions.

Electric vehicles are powered by electric motors drawing current from rechargeable storage batteries, fuel cells, or other portable sources of electrical current, permitting the use of different powering technologies and not restricting the nature of the vehicles to be included in the commercialization program.

Life cycle costs are defined as all the costs associated with the purchase, operation maintenance and disposal of a vehicle.

Section 8: Authorization of Appropriations.

The legislation authorizes the appropriation of $10,000,000.00 for each of the five fiscal years following the date of enactment of this Act.

INTRODUCTION OF THE ELECTRIC VEHICLE TECHNOLOGY COMMERCIALIZATION ACT

HON. VIC FAZIO

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 23, 1990

Mr. FAZIO. Mr. Speaker, in the debate on ways to improve the quality of our environment, much attention is now being focused on alternatives to conventional motor vehicle fuels. In my experience, however, inadequate attention has been paid to one important alternative fuel option—electricity. For this reason, my colleagues, Mr. BROWN, Mr. LEWIS, and I are introducing legislation, the Electric Vehicle Technology Commercialization Act of 1990, to encourage the widespread use of electric vehicles [EV's] in this country.

The legislation we are proposing calls for a multiyear Federal cost-sharing program that will demonstrate the environmental and energy benefits of electric vehicles. The measure will also serve to stimulate market demand for electric vehicles and encourage technical enhancements to improve today's available technologies.

Using EV's instead of gasoline-powered vehicles will produce substantial reductions in the emissions that produce urban smog. In addition, increased use of EV's offers an important means to improve our energy security by cutting our growing reliance on supplies of foreign oil.

When compared with the benefits of other alternate fuel technologies the environmental benefits of EV's often exceed those offered by other frequently cited alternatives.

Yet given their current state of development, vehicles using these other alternate fuels may be closer to commercial availability than are electric vehicles. If our Nation is to realize the substantial environmental benefits offered by EV's, we must begin efforts now that will assist in the accelerated commercialization of EV's.

We have recognized at least since the passage of the Electric and Hybrid Vehicle Research, Development and Commercialization Act in 1976 that sound national energy policy should include increased reliance on electric vehicles. Still there is presently no electric vehicle alternative available to potential users. A myriad of problems combine to frustrate the widespread development of electric vehicles, including high per vehicle cost. These high costs are, in part, a result of the fact that economies of scale and facilities to produce electric vehicles are not available. This lack of production facilities is itself the result of a lack in consumer demand for electric vehicles. Consumer resistance is also an outgrowth of the lack of consumer experience with electric vehicle technology. We have a completed circle for inaction.

The legislation we are offering today will address these impediments to electric vehicles. The Electric Vehicle Technology Commercialization Act calls for the Department of Energy to issue a competitive solicitation for one or more manufacturers to assume responsibility for producing, delivering, servicing, and selling electric vehicles. Specifications for the solicitation would be prepared by the Department of Energy, to assure that the highest technical standards are met by the proposers and the best available technology is produced.

Manufacturers responding to the DOE solicitation would be required to commit to distribute vehicles in the most serious nonattainment areas, as determined by the Administrator of the Environmental Protection Agency and the Secretary of Energy. In this way, the program would demonstrate the contribution that electric vehicles can make to air quality restoration efforts in severely polluted, urban areas.

I have also introduced legislation to reform Federal procurement policies to encourage the acquisition of alternately fueled vehicles. However, the legislation we introduce today has a different goal of generating enough experience with electric vehicles and information on the capabilities of the available technology to encourage the eventual development of a selfsustaining electric vehicle market.

Our other key element of the proposal is private sector cost-sharing. Under the legislation, the Federal share of the cost of any electric vehicle to be produced by a manufacturer is limited to 50 percent of the vehicle's selling price. This limitation is designed to assure that Federal funds are leveraged to the greatest extent possible with private sector funds. In addition, during the multiyear life of the demonstration program, economies of scale and technical advances will produce reductions in per vehicle costs. The legislation also provides that in no circumstance may the purchase price of an electric vehicle supported under this program be reduced to less than the manufacturer's suggested retail price of a

comparable, gasoline fueled vehicle. An alternative means of calculating the Federal cost-share is also provided, which is based on the difference in life cycle costs between an electric vehicle produced under the program and a gasoline powered vehicle.

The planned multiyear duration of the program will provide stability and permit the integration of technology improvements, such as advanced batteries, that are foreseen in the next several years. With improved battery technologies will come improvements in vehicle range and performance characteristics, all of which are essential before the electric vehicle can be viewed by consumers as an acceptable mode of transportation or delivery. I believe that we may even encourage additional private sector research and development efforts in electric vehicle batteries once manufacturers realize that a market for the batteries is being developed.

The importance of electric vehicle technology development must be addressed in conjunction with the clean air debate, and particularly the alternative fuels programs being discussed as part of those efforts. This legislation complements the objectives of the alternative fuel proposals already under consideration, and I am hopeful that we can look forward to action on this proposal in the very near future.

REPEAL SOCIAL SECURITY TAX INCREASE

HON. PAT WILLIAMS

OF MONTANA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 23, 1990

Mr. WILLIAMS. Mr. Speaker, I rise today to introduce legislation to cut the payroll tax for Social Security this year. This reduction would be retroactive to January 1, 1990. My bill would reduce the tax rate to 7.51 percent in 1990 for both employees and employers while permitting the wage base to rise to $51,300. In 1991, and calendar years thereafter, the rate would fall to 7.35 percent. This bill applies the same tax cut to tier I railroad retirement.

This act would save workers and employers in Montana a combined total of $11.9 million in 1990. This is vital to the workers and employers in my State.

We have allowed Social Security trust funds to be used to pay for increases in defense spending, servicing the interest on our national debt, and reducing the deficit. It is time to face reality and move away from this regressive form of taxation as a major source of revenue.

We have borrowed trust funds to the point where we will have to find new revenue sources to pay Social Security benefits when they become due regardless of action on this bill. This trust fund is not the only one that we are borrowing from to meet the increases in defense spending, interest payments and deficit reduction, but it is clearly the largest. We are also committing the same hoax with highway, retirement, and unemployment insurance funds. The following table from CBO's August 1989 Economic and Budget Outlook (p. 51) displays the magnitude of this problem:

TABLE II-6.—TRUST FUND SURPLUSES IN THE CBO BASELINE

[By fiscal year, in billions of dollars]

	Actual 1988	1989	1990	1991	1992	1993	1994
Social Security	39	54	65	75	86	99	113
Medicare	15	21	23	21	17	15	13
Military Retirement	14	15	14	14	15	15	16
Civilian Retirement [1]	19	20	21	23	24	26	28
Unemployment	8	8	9	6	4	4	3
Highway and Airport	2	4	2	1	1	1	([3])
Other [2]	1	([3])	2	2	2	1	1
Total trust fund surplus	98	121	135	143	150	162	175
Federal funds deficit	−253	−283	−276	−287	−291	−304	−303
Total deficit	−155	−161	−141	−144	−141	−143	−128

[1] Includes Civil Service Retirement, Foreign Service Retirement, and several smaller funds.

[2] Primarily Railroad Retirement, Employees' Health Insurance and Life Insurance, and Hazardous Substance Superfund.

[3] Less than $500 million.

Source: Congressional Budget Office.

This legislation will further protect the Social Security trust fund by taking these funds out of the calculation used to meet the Gramm-Rudman target, and therefore the Congress and the Nation to develop a more progressive form of revenue increases or face a higher, more honest deficit level.

UKRAINIAN INDEPENDENCE DAY

HON. BENJAMIN A. GILMAN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 23, 1990

Mr. GILMAN. Mr. Speaker, this week is the 71st anniversary of the Declaration of Independence by the Ukraine. After years of oppression by the Soviets, the independence of the Ukrainian people has long ago ceased to be a political reality. However, the spirit of independence which lives on in the hearts of Ukrainians remains unabated and stronger than ever.

The Ukrainian nationality enjoys one of the richest histories and cultures of all European peoples. Under the 19th century leadership of that literary giant, Taras Shevchenko, Ukrainian literature has been the envy of scholars and linguists since the mid-1800's. Shevchenko was not satisfied with leading the revival of Ukrainian writing, however; he also spearheaded the Ukrainian cultural revival, which proved to be the bedrock for the subsequent efforts to achieve Ukrainian political independence.

Michael Drahomanov formulated a political program for the Ukraine during the latter part of the 1800's. Drahomanov, a political moderate, envisioned the liberation of the Ukrainian people by means of democracy, federalism, and social reform. These moderates worked on the local level through cooperatives, but found their work twarted by the repressiveness of the Czarist regime. The door was open for the Ukrainian radicals, who founded the Revolutionary Ukrainian Party in 1899.

Thus, the stage was set for Ukrainian independence when World War I engulfed the peoples of Europe.

The magnitude of the First World War proved too burdensome to the already corrupt and weakened Czarist regime. The March Revolution of 1917 overthrew monarchy forever in the Russian Empire. Later that year, the November revolution brought the Communists to power. The Ukrainian leaders were quick and adept in seizing this initiative to formulate a national state. On January 22, 1918, the independent Republic of the Ukraine was established.

Despite the determination of the Ukrainian people, under the sterling leadership of Simon Petlyura, Ukrainian independence proved to be extremely short lived. The Bolsheviks, who gained control of Russia, invaded the Ukraine from the north and the east. Poland invaded the Ukraine from the west. The White Russians conducted a fifth-column civil war from within the Ukraine. Against these combined forces, the armed services of the Ukraine didn't stand a chance, despite their courage on the battlefield. When the shooting came to an end, the Ukrainian Republic had ceased to exist. The U.S.S.R. and Poland divided Ukrainian lands between themselves. Even the newly created nation of Czechoslovakia gobbled up some Ukrainian territory.

Under the dictatorial heel of Josef Stalin, the Ukrainian people suffered greatly. A famine in the early 1920's claimed many lives. But this tragedy paled when the great famine of the 1930's took place. Forced collectivization of agriculture caused the death of some 3 to 5 million Ukrainians. As a member of the Ukrainian Famine Commission, I joined with my colleagues on that Commission in culling through substantial testimony regarding the inhumanity and the crimes which took place during those terrible days—a deliberate effort to crush the spirit and the heart of the Ukrainian people, and to thoroughly Russianize the Ukrainian homeland.

Those efforts were not successful. Today, the Ukrainian people remain more determined than ever to preserve their rich cultural heritage and their political integrity.

Mr. Speaker, in my own congressional district, Ukrainian Independence Day was commemorated by numerous Ukrainian-Americans as well as Americans of Ukrainian ancestry. In Glen Spey, NY, one active Ukrainian-American community conducted commemorative services which stressed the deep religious faith of the Ukrainian people. In Rockland County, NY, the Ukrainian-American Veterans Association memorialized the many Ukrainians who died on the battlefield both in the Ukraine, to achieve independence, and throughout the world, to protect the liberties of the United States.

Mr. Speaker, I invite all of our colleagues to salute a proud people on a proud occasion, and to join with us in praying for the day that Ukrainian independence will be revived, total and permanent.

WE TRY HARDER—U.S. FUNDING EFFORT FOR EDUCATIONAL EXCELLENCE LAGS OTHER NATIONS

HON. MATTHEW G. MARTINEZ
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 23, 1990

Mr. MARTINEZ. Mr. Speaker, if you want better results, you try harder. At last September's education summit, President Bush declared that the United States "lavishes unsurpassed resources" on education. Shortly before the summit, Bush's Chief of Staff, John Sununu, declared "(w)e spend twice as much (on education) as the Japanese and almost 40 percent more than all of the other major industrialized nations of the world." According to the administration, we are spending more and getting less.

"It ain't necessarily so" according to a recent study from the Economic Policy Institute, a nonpartisan research organization. Economists will argue until the Moon turns blue over the best way to compare activities across nations. Multiple indicators are vital: Different measures tell us different things. Policy differences—such as national programs for health care and pensions and definitions of who is a teacher—can make comparisons of even basic things, such as teacher salaries—one of the largest factors in cost-per-pupil ratios—tricky to compare. Wild fluctuations in the value of the U.S. dollar, due in large part to the twin deficits that emerged during the Reagan administration, make currency conversions difficult. Despite complexities, the issue of how we are doing is too important to ignore.

"Shortchanging Education: How U.S. Spending on Grades K–12 Lags Behind Other Industrial Nations" by the Economic Policy Institute opens a vital dialog. One would expect the United States to spend more on education than more centralized and homogeneous nations. Given decentralization, immigration, big regional differences and rapid economic change, one would expect the United States to spend more on education. Moreover, our Nation's commitment to building educational excellence for the disadvantaged and for the handicapped in order to keep America a land of opportunity for all demands higher levels of expenditures than in lands where students are tracked at an early age into vocational and college prep programs.

Effort is important in solving problems—and we have problems. Study after study tells that United States students lag relative to our goals and relative to other nations. The proportion of gross domestic product devoted to education is probably the best single measure of this effort. As CRS points out, among other things, there are fewer problems with data expressed relative to a nation's own currency. The proportion of national product going into an activity—such as health care or defense—is widely used as one measure of effort. Issues of how those resources are used—such as the fair chance of a local school to obtain an equitable share of those resources to educate its students—are equally vital, and an area that international comparisons could also inform as we appear to lag many nations in this area as well.

This is not the first study to suggest that the United States may not be trying harder when it comes to funding education. A 1988 study by the Congressional Research Service pointed out that the United States primary school teacher-student ratio was equal or higher than for all other nations in the study except Japan—and even Japan had lower ratios for early elementary grades. CRS also found that average teacher compensation was below that for 4 of the 7 other nations in the study. CRS noted that the United States was devoting significantly less of its educational finance effort to K–12 education than nations such as Germany and Japan—with Japan spending a tenth of a percent more of its huge GNP than did the United States.

It is not just CRS that has raised concerns in this area. For example, a 1986 Comparison of Teachers' Salaries in Japan and the United States contracted by the Department of Education found that while salaries of entering teachers in Japan could be less than in the United States, salaries of senior Japanese teachers were as much as 30 to 40 percent higher than in the United States—and Japan had much higher retention rates for teachers as indicated by seniority. As the study put it: "This means that the average Japanese teacher's salary buys a significantly larger share of the nation's goods and services than does the average teacher's salary in the United States."

I have always said that "Education is the first line of defense." As tidal waves of change reshape the "Soviet Block"—and as the need to improve our schools to meet domestic and international challenges grows—the question of where we should put our financial muscle again comes to the fore.

As the banker said, "That which is not financed does not exist." The EPI study points out the need to strengthen our knowledge of the competition. That is why I strongly support U.S. participation in the OECD educational indicator project, and why I authored provisions in the pending reauthorization of the Perkins Vocational Education Act to develop internationally comparative data on technological education.

The Department of Education has attacked the "Shortchanging Education" study with such vigor that I believe that it is vital that members have the opportunity to examine the study first-hand as part of the larger debate over building educational excellence in America. Major excerpts from the study follow; the full text is available from the Economic Policy Institute.

SHORTCHANGING EDUCATION: HOW U.S. SPENDING IN GRADES K–12 LAGS BEHIND OTHER INDUSTRIAL NATIONS

(By M. Edith Rasell and Lawrence Mishel)

Over the past decade, Americans have become increasingly concerned about the educational and academic achievements of US students, particularly at the primary and secondary levels. Numerous high-level commissions, composed of leaders from government, education, and business, have examined the schools, and most recently state governors and Administration officials, including President Bush, met at the "Education Summit" to discuss needed reforms. Improving the education of US students has risen to the top of the public agenda.

President Bush, who has declared his desire to be known as the "education president" has, however, attempted to limit the discussion of educational reform initiatives to those which do not involve spending additional public funds. At the "Education Summit" in September President Bush declared that the US "lavishes unsurpassed resources on (our children's) schooling." Therefore, "our focus must no longer be on resources, it must be on results." At this same conference, Secretary of Education Lauro Cavazos stated that the problem with US education "is not . . . an issue of dollars . . . (Funding is truly not an issue."

The President and administration officials have justified this anti-spending stance by asserting that the US education system is already well-funded in comparison with other industrial nations. Two measures of spending have been used by Administration officials and others to compare US expenditures with those of other countries. One measure is spending per pupil. According to Secretary Cavazos, "we are already spending more money per student than our major foreign competitors, Japan and Germany." President Bush's Chairman of the Council of Economic Advisers, Michael Boskin, agrees: "(w)e spend more, per pupil, than most of the other major industrialized economies." In the New York Times, Chester Finn, Jr., former Assistant Secretary of Education in the Reagan Administration wrote "(w)e already spend far more per pupil than any other nation."

The second measure of spending which is used to make international comparisons is the share of national income devoted to education. In appearances on the NBC "Today Show" . . . President Bush's Chief of Staff, John Sununu declared, "(w)e spend twice as much (on education) as the Japanese and almost 40% more than all of the other major industrialized countries of the world." The Council of Economic Advisors Chairman Boskin stated, "we spend a very large amount of our national income on education."

The Administration's proposition that US education is well-funded and therefore poor student performance cannot be a matter of insufficient monies is a key element in the national debate over education. It has provided policymakers at federal, state, and local levels a convenient rationale for not devoting more resources to education in a time of budgetary stress.

This paper is an examination of the statistical under-pinnings of the Administration's claims. It concludes that the assertions about funding are misleading and therefore invalid guides to educational policy. Specifically, our examination of education expenditures in 16 industrialized countries, adjusted for differences in national income, shows:

US public and private spending on pre-primary, primary and secondary education, the levels of schooling which have been the focus of most concern, is lower than in most other countries. The US ties for 12th place among 16 industrialized nations, spending less than all but three countries.

When expenditures for K–12 are further adjusted to reflect differences in enrollment rates, the US falls to 14th place, spending less than all the other countries but two.

When US public spending alone is compared to public spending abroad, we rank 14th in spending for *all* levels of schooling, 14th in spending on K–12, and 13th on K–12 spending adjusted for enrollments.

If the US were to increase spending for primary and secondary school up to the *average* level found in the other 15 countries, we would need to raise spending by over $20 billion annually . . .

This paper is focused on education spending. It is not a prescription for improving the US education system. We recognize that money does not guarantee excellence and we suspect that other changes—in curriculum, in the status of teachers, and in expectations about students, to name just a few, will also be fundamental to any improvement in education quality and student achievement. But to begin a process of education reform by denying the need to increase spending, especially when US schools are under-funded compared to those in other industrial countries, places a severely limiting constraint on any plans for educational improvement.

This paper compares education spending in 16 industrialized countries: most of western Europe, Canada, Japan, and the US. Our data source is the UNESCO, virtually the only commonly accepted source for such comparisons and the same source used by Administration officials. US 1985 expenditure data come from the Digest of Education Statistics.

INTERNATIONAL COMPARISONS: EDUCATION SHARE OF NATIONAL INCOME

We will begin our study by comparing education expenditures expressed as a percentage of national income (Gross Domestic Product). This is a common method used for international comparisons which allows us to avoid the distortions caused by fluctuating exchange rates. Also, education expenditures expressed as a percentage of national income provide a measure of the national effort which each country directs toward education.

Table I shows education expenditures as a percentage of national income for 16 countries in 1985, the last year for which such data are available. A first, but as we will show later, misleading glance shows that US spending for all levels of schooling. . . . amounted to 6.8% of national income. This places the US in a three-way tie for second place with one of the highest expenditure levels among the 16 countries studied. By this measure it appears that only Sweden spends a larger share of national income on education than does the US, and Canada and the Netherlands spend equivalent amounts. This figure showing the US to spend a relatively large percentage of national income on education is the basis for claims made by the President and others that the US spends "lavishly" on education and that we spend more than most other countries.

This comparatively high expenditure on education is due, in large part, to the substantial sums the US spends on higher education. A relatively larger number of US students are enrolled in post-secondary education than in most other countries. In 1985, 5.1% of the entire US population was enrolled in some form of higher education, a figure two to three times larger than the percentage enrollments of any other country except Canada. Larger enrollments, in what is also a more expensive form of education raise US total education expenditures above levels in many other countries.

But the current crisis of American schools is not higher education: it is in the primary and secondary school systems. A comparison of funding for all levels of education combined thus obscures the main focus of concern about American education. If spending on K-12 only is compared, in 1985 the US tied for 12th place spending less than 11 of the other countries. . . .

But this picture of relative spending is still incomplete. Calculations of funding adequacy must also be related to the size of the school age population in each country. Among the countries studied, the US enrolls a relatively large percentage of the population in pre-primary, primary, and secondary school. For example, over 19% of the US population is enrolled in K-12, but less than 15% of the West German population. . . . (When expenditure figures) are adjusted to take into account the relative size of each country's K-12 enrollment . . . among the 16 countries studied, the U.S. spends less on preprimary, primary, and secondary education than all but two other countries. Only Australia and Ireland spend less than the U.S. for the critically important grades K-12 (see Figure 1).

We can also compare U.S. education spending as a share of national income with the average share of the other 15 countries. . . . The U.S. spent 4.1% of its national income on K-12 education in 1985, while the average abroad was 4.6%. If the U.S. were to have reached this average in 1985, we would have needed to raise spending for pre-primary, primary, and secondary school by over 12%, or by $20.6 bn. annually.

All the international comparisons made thus far still give an incomplete picture of comparative education spending. Large U.S., Japanese, and German trade imbalances skew the data and make the U.S. education expenditure appear larger than is actually the case. A more accurate picture of education spending, taking into account trade imbalances, would lower U.S. spending and raise Japanese and German spending beyond the levels shown in Table 1.

FIGURE 1.—*Comparison of Country Education Expenditure, 1985*

	Percent
Sweden	7.0
Austria	5.9
Switzerland	5.8
Norway	5.3
Belgium	4.9
Denmark	4.8
Japan	4.8
Canada	4.7
West Germany	4.6
NonUnited States average	4.6
France	4.6
Netherlands	4.5
United Kingdom	4.5
Italy	4.2
United States	4.1
Austrialia	3.9
Ireland	3.8

SPENDING ON GRADE K-12 AS PERCENT OF GROSS DOMESTIC PRODUCT PUBLIC SPENDING ON EDUCATION COMPARED

We have seen that the U.S. spends a smaller share of its national resources on K-12 than do most other industrialized countries. But there is another dimension in which characterization of the U.S. as a big spender on education is wrong—public expenditures.

For most of the 16 countries studied UNESCO assembles data on public expenditures for education because public revenues provide virtually all the money spent on education. . . . The two exceptions are Japan and the U.S. where 20-25% of all educational funding comes from private sources. For these two countries UNESCO provides data on public and private education expenditures. . . . If we educated public and private K-12 students at the actual per public expenditure found in public schools, this would increase spending and raise the U.S. ranking from 14 to 13.

INTERNATIONAL COMPARISONS: EXPENDITURES PER PUPIL

Thus far we have focused on education's share of national income in different countries. Education investment can also be analyzed by comparing expenditures per pupil. . . . However, there are two potential sources of error in the use of per pupil expenditures to compare nation's spending on education. The first is the instability of exchange rates. Before cross-national comparisons can be made, expenditures measured in each country's national currency must be expressed in some common unit of measurement, e.g. dollars, yen, marks, etc. But whatever measure one chooses, it requires converting data collected in all other currencies to one currency. However, exchange rates fluctuate, sometimes markedly, and this has been particularly true in the 1980s. For instance, in 1985, if $100,000 would have purchased a German school bus, by 1988, due to a decline in the value of the dollar, the same bus could have cost $166,000. . . . The size of the German expenditure measured in German marks would be unchanged, but fluctuations in the exchange rate used to convert marks to dollars would markedly change the dollar value of the expenditure. . . . Using 1985 exchange rates . . . . the U.S. ranked fourth among the 16 countries studied. But if some other value of the dollar is used to make the conversion, e.g., the 1988 exchange rate, then the U.S. ranking changes to ninth.

The second problem in using per pupil expenditures is that they do not necessarily reflect the national effort devoted to education. The real issue underlying cross-national comparisons is not the number of dollars . . . which each country spends, but the relative national effort devoted to education. For example, a poorer country could spend a relatively larger share of national income on education, i.e. could make a large national effort to educate its youth, but have a much lower spending per pupil than a richer country devoting a smaller share of its income to education. Before meaningful international comparisons can be made, education expenditure levels must be related to some measure of total national income.

Moreover, countries with high per capita incomes will also have higher wages reflecting a higher standard of living. . . . Therefore, we would expect education expenditures per pupil to be higher in the U.S. than in other countries.

Per pupil expenditures can be used to make international comparisons if two conditions are met: exchange rates are avoided, and if some measure of national income is included in the calculation. Such a measure is shown in table 6 . . . We find that of the 16 countries studied, US spending on preprimary, primary, and secondary education is lower than in all but two other countries.

THE HISTORICAL RECORD

Despite the increase in overall US education funding of K-12 between 1980 and 1985, our position relative to other countries declined. . . . In 1980 the US ranked 12th in adjusted spending on K-12, spending less than 11 other countries. But by 1985 the US had fallen in rank to number 14. . . .

CONCLUSION

We have seen that when public plus private spending on all levels of education is

compared with the spending in other industrialized countries, the US is in a three-way tie for second place among the countries studied. However, when spending for primary and secondary education alone is compared with expenditures abroad, the US ranking falls to a tie for 12th place. And when adjustments are made for enrollment size, the US falls further to 14th place, spending less than all the other countries except two.

When levels of public spending on education only are compared, showing the social commitment to education, again the US compares unfavorably with the other countries. Comparisons of public spending for all levels of education and for K-12 alone, both place the US in 14th place. In enrollment adjusted K-12 public expenditures, the US does slightly better, ranking number 13th. But by all comparisons, the US devotes fewer resources to primary and secondary education than do most industrialized nations.

The claim that the US spends more than other nations on education is misleading. By all comparisons, the US devotes a smaller share of its resources to pre-primary, primary and secondary education than do most industrialized countries.

The comparatively weak US investment in K-12 is not a result of a more efficient administrative structure or favorable demographics. In fact, the US might be expected to spend proportionally more than other countries because of the particular characteristics of the US school system and American society. Our decentralized school system gives more local autonomy and local choice, but is also more expensive than a single, centrally administered system. Our population is more heterogeneous than in most other countries. Some immigrants do not speak English. Students come from a variety of cultural backgrounds. The very high number of children living in poverty makes additional demands on the school system.

Available data do not permit cross-country comparisons to be made in much more detail, but other evidence suggests that the spending gap is particularly wide between the youngest American and foreign children. For example, it is generally accepted that the US Head Start Program of early childhood education for disadvantaged children age three to five is valuable and cost effective, yet limited federal funding permits only 20% of eligible children to take part. Many of our competitors seem to have a stronger commitment to early childhood education, and some of them have nearly universal pre-kindergarten enrollments. In France, 100% of four and five year olds attend school/educational day care, 90% of three year olds attend, and 36% of the two-year-olds. In Belgium, 96% of three- to six-year-olds are in school, and in the Netherlands, 98% of four- and five-year-olds.

Spending m only answer to the difficult problem of revitalizing primary and secondary education in the US. But the data presented here indicate that in education, as in every other service, we may "get what we pay for." Given the level of investment in our pre-primary, primary, and secondary schools, it is not surprising that we are slipping behind in comparative measures of performance as well.

LEGISLATION TO RESCIND THE SOCIAL SECURITY [FICA] TAX

HON. TIMOTHY J. PENNY

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 23, 1990

Mr. PENNY. Mr. Speaker, today I am introducing legislation to rescind the Social Security [FICA] tax increase that went into effect on January 1, 1990, and to further reduce the FICA tax in 1991 by 1.1 percent on both employees and employers. A similar proposal has been advanced in the other body by Senator DANIEL PATRICK MOYNIHAN.

Specifically, my bill will reduce the FICA tax to its 1989 level of 6.06 percent from the current level of 6.2 percent. In 1991, the FICA tax would be further reduced to 5.1 percent. This legislation would result in a $7 billion saving for Social Security taxpayers in 1990 and a $55 billion saving in 1991. The FICA tax levels proposed in my bill are based on the recommendations of Robert J. Myers, who was Social Security's chief actuary for 23 years, in testimony before Senator MOYNIHAN's Social Security Subcommittee last year.

This tax reduction will mean an additional $600 per-year to a couple with combined earnings at the Social Security taxable maximum ($54,300 in 1991). For the 74 percent of working Americans who pay more FICA taxes than Federal income taxes, this will be real tax cut. It will produce an immediate positive impact on the overall economy and should assist in creating new job opportunities.

My legislation will also put to an end the "great budget charade of the 1980's," namely: using Social Security tax receipts to fund the general operations of government, a purpose for which they were never intended. Enactment of this legislation will finally force the President and the Congress to focus on real deficit reduction while protecting future Social Security retirees.

I know this is a controversial and provocative proposal. However, dramatic action is necessary to force Congress and the administration to talk about how to set national priorities and balance the budget. With the actual deficit exposed we will be required to look at a combination of specific budget cuts and/or tax increases to bring us to our goal of a balanced budget. Second, it will once again stimulate discussion on the long-term solvency of the Social Security system, including the possible adjustment of benefits in the future for those in the Baby Boom generation. We want to guarantehuge tax increase on 21st century workers. In the near future, I plan to introduce additional reforms to address these concerns.

Reducing the payroll tax is a dramatic step, but one that may be necessary to bring us to our senses about the deficit. There are many options available to achieve this objective, but it is clear that we must act now.

H.R. —

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled,

SECTION 1. REPEAL OF SCHEDULED INCREASE IN SOCIAL SECURITY TAXES; REDUCTION OF TAXES IN 1991.

(a) TAX ON EMPLOYEES.—Subsection (a) of section 3101 of the Internal Revenue Code of 1986 (relating to tax on employees) is amended by striking the last 2 items in the table and inserting the following:

"1988, 1989, or 1990	6.06 percent.
"1991 or thereafter	5.10 percent."

(b) TAX ON EMPLOYERS.—Subsection (a) of section 3111 of such Code (relating to tax on employers) is amended by striking the last 2 items in the table and inserting the following:

"1988, 1989, or 1990	6.06 percent.
"1991 or thereafter	5.10 percent."

(c) SELF-EMPLOYMENT TAX.—Subsection (a) of section 1401 of such Code (relating to self-employment tax) is amended by striking the last 2 items in the table and inserting the following:

"December 31, 1987–January 1, 1991	12.12
"December 31, 1990	10.20."

(d) TIER 1 RAILROAD RETIREMENT TAX ON EMPLOYEES.—Subsection (a) of section 3201 of suc tax on employees) is amended by striking the last 2 items in the table and inserting the following:

"1988, 1989, or 1990	7.51.
"1991 or thereafter	6.55."

(e) TIER 1 RAILROAD RETIREMENT TAX ON EMPLOYEE REPRESENTATIVES.—Subsection (a) of section 3211 of such Code (relating to tier 1 railroad retirement tax on employee representatives) is amended by striking the last 2 items in the table and inserting the following:

"1988, 1989, or 1990	15.02.
"1991 or thereafter	13.10."

(f) TIER 1 RAILROAD RETIREMENT TAX ON EMPLOYERS.—Subsection (a) of section 3221 of such Code (relating to tier 1 railroad retirement tax on employers) is amended by striking the last 2 items in the table and inserting the following:

"1988, 1989, or 1990	7.51.
"1991 or thereafter	6.55."

(g) EFFECTIVE DATES.—

(1) IN GENERAL.—Except as otherwise provided in this subsection, the amendments made by this section shall apply to remuneration paid after December 31, 1989.

(2) SELF-EMPLOYMENT TAX.—The amendment made by subsection (c) shall apply to taxable years beginning after December 31, 1989.

REMEMBERING THE BUDAPEST GHETTO

HON. STEPHEN J. SOLARZ

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 23, 1990

Mr. SOLARZ. Mr. Speaker, the bright new dawn rising over Europe is being felt around the world. The Iron Curtain that had descended over Hungary so many years ago has been lifted as relations between that nation and the State of Israel have been renewed.

To mark the resumption of diplomatic relations between these two great nations, and to celebrate the increasing liberalization of human and religious rights by the Hungarian Government, the Emanuel Foundation for Hungarian Culture will sponsor a gala dinner at the Hotel Pierre on January 31, 1990.

The proceeds of the dinner will benefit the new Hungarian Holocaust Victims and Heroes Memorial which is currently being erected on the site of the Budapest Ghetto. It was there that thousands of Jews died of disease and starvation, victims of the depraved Nazi slaughter that swept over Europe a half century ago. Funds raised at the dinner will also support the renaissance of Jewish culture and Jewish institutions in Hungary, including the Dohany and Kzinczy Synagogues.

The memorial itself will represent a tree in the shape of an inverted menorah, with the names of those who perished inscribed on the tree's leaves as a lasting memorial to the past and as a symbol of hope for the future.

The most extraordinary part of the memorial will be the site itself. Located on the corner of Rumbach and Wesselenyi Streets in downtown Budapest, and adjacent to a mass grave where thousands of Holocaust victims were interred anonymously, the plaza has been donated by the Hungarian Government.

For the survivors of the Nazi terror, and for Jews around the world, this rebirth of a community once nearly obliterated by the blind brutality of fascism is indeed a miracle. Were these extraordinary events merely a great new day for world Jewry, it would be enough.

The events of the last few months are a sign of hope for all humanity: the chipping away at the Iron Curtain, the memorialization of the victims of the Holocaust, the restoration of human rights are all events that have captured the imagination of the world. People of all nations are rejoicing in the fresh breeze blowing across the continent.

I am proud to note the active role our Nation, and its Jewish community, has played in these exciting events. The work of the Emanuel Foundation for Hungarian Culture is a shining example of the activist role being played by these partisans of freedom.

The foundation will honor five great Americans at its dinner:

Richard Roth, of the architectural firm of Emery Roth & Sons, is a native New Yorker and the firm's chairman since 1988. While the name Emery Roth & Sons may not be well known to the man on the street, its buildings are. Its best known works are the World Trade Center, the Pan Am Building, and the Citicorp Building. These striking and innovative structures are as much a part of the New York landscape as Central Park or the Brooklyn Bridge.

The firm's founder Emery Roth, immigrated to the United States in 1884 and lived the American dream, founding his own firm at the age of 32. His buildings are now landmarks and the firm he began one of New York's most respected.

Michael Hont of the brokerage house of Asiel & Co. has been active in the effort to erect a monument to the martyrs and heroes of the Budapest ghetto. In recognition of his efforts, he will receive the Humanitarian Award. A member of the board of the Emanuel Foundation, he is a fountain of energy and commitment.

Most of all, Michael Hont has been a builder for the future of Hungary's Jewish community. He has worked to forge bonds of understanding between people of all faiths and nationalities. Through his work he is helping to give life to the words "never again!"

Erwin and Madeleine Herling will receive the Memorial Builder Award for their dedicated support of the Hungarian Holocaust Victims and Heroes Memorial and for the Dohany Synagogue in Budapest.

Erwin Herling helped rebuild Hungarian industry after the war and, as president of the Getex Corporation, is a highly successful importer of clothing from Eastern Europe. It was on one of his early trips to Hungary that he met his wife, Madeleine, whom he married in the Dohany Synagogue.

Madeleine Herling is also a successful business person. As president of Jolie Gabor Ltd. and the Countess Madeleine Galleries, Ltd., she brings her own special talents and creative instincts to the world of fine jewelry and art.

Erwin and Madeleine Herling have never forgotten the importance of repaying good fortune. As Mr. Herling has often said, "The more we give, the closer we approach Godliness."

Ibi Adler will be presented with the Memorial Patron Award. A native of Nyiregyhaza, Hungary, she has long been known for her quiet, unassuming, yet effective assistance to the elderly in both Hungary and the United States. Bringing food, and subsidizing medical care, she has become a guardian angel for these communities.

With her husband, George, Ibi Adler has worked tirelessly on behalf of the Emanuel Foundation as a board member and advocate for the establishment of a monument to the Hungarian Jews killed by the Nazis.

The evening's speaker will be the acclaimed author Leon Uris, who has traveled across the United States and to Hungary to promote the work of the foundation and the memorial in Budapest.

Mr. Speaker, from the ashes of a divided and war-torn Europe, a new Europe is rising. We must never forget the terrible events of the past, but we must strive to overcome the burden of that bitter legacy. The opening of Europe, the establishment of relations between Hungary and Isreal, the restoration of human rights in Hungary, and the construction of a Holocaust memorial on the site of the Budapest ghetto are all signs of extraordinary change. I am pleased and honored to join the Emanuel Foundation for Hungarian Culture in celebrating these historic events and in honoring these exceptional individuals.

INTRODUCTION OF LEGISLATION TO ADDRESS THE HOME HEATING OIL CRISIS

HON. SILVIO O. CONTE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 23, 1990

Mr. CONTE. Mr. Speaker, today I will introduce a comprehensive legislative response to the recent crisis in home heating oil supplies and prices.

In December of last year and earlier this month, the Northeast and other areas of the country experienced and felt the greed of big oil first hand. In the middle of one of the coldest periods in history, the supply of home heating oil to New England was restricted and the price jumped through the roof. On December 4, the average retail price per gallon was 90 cents. Within a week, it jumped 12 cents to $1.02, and the next week it jumped another 8 cents to $1.10 per gallon. And that was just the beginning. In just 3 days, between December 18 and December 21, the price jumped another 13 cents. For the next 13 days, the price increased an average of over 2 cents per day, skyrocketing from $1.23 on December 21 to $1.51 on January 1. And there's no way anyone can tell me the costs of production caused this unconscionable gouging of American consumers.

This avaricious conduct on the part of the oil companies has a real and dangerous impact on the people of my region and down the eastern seaboard. In Boston, the price rose 52 percent during December. In Philadelphia, the people were subject to a 51-percent price increase. In Baltimore, it was 45 percent, and in Washington, DC the increase was 49 percent during this short period. Overall, this money grab by big oil produced the greatest monthly increase in home heating oil ever recorded, and the impact was substantial, real, and painful.

In testimony submitted earlier this month, the Governor of Massachusetts reported a few real life effects of this crisis. There's the elderly woman, sitting huddled in her chair in her small living room, bundled up in winter coat, boots and hat, with the thermostat set at 60°. When she was told by a visiting nurse that she must turn up the thermostat for her own well being, the lady told her that she was unable because she couldn't afford to buy food and pay the high cost of oil at the same time. And there's the elderly woman on social security who receives fuel assistance. She called the State energy office, shaking and scared, with a desperate plea for help. Her $675 fuel stipend which normally lasts the winter is now down to $87. She still had half of January, February, and March to pay for, and she is keeping her thermostat at 55°.

Mr. Speaker, in my 32 years in this House, I've rarely seen such uncontrolled greed, even during the energy crisis of the 1970's. It's unconscionable the way these companies exploited the necessities of human life for profit,

for the bottom line. Such gluttony will not go unchecked, and to address this crisis, I am introducing a comprehensive legislative package. It's a four-point plan designed to address past actions, the present crisis and the future.

First, we must find out what happened and get those who broke the law. I will introduce a joint resolution directing the Secretary of Energy, in consultation with the Attorney General, the General Accounting Office, and the Federal Trade Commission, to conduct an emergency study to determine the direct and indirect causes of the price increases and to recommend measures to avoid such a disruption in the future. The resolution also directs the Secretary to report any violations of the law to the Attorney General for prosecution.

Second, we must disgorge excess profits from those who abused the free market system. I will introduce a bill imposing a retroactive windfall profits tax on all those profits in excess of the average company profit for November 1989. The revenues from this tax will be placed in an emergency fund and will be made immediately available for use by the Low Income Home Energy Program.

Third, we must respond immediately, with direct Federal appropriations, to help those most affected by the rapid and unparalleled increase in the price of home heating oil. I will introduce a dire emergency supplemental appropriations bill to provide immediate relief for low income energy consumers. The bill will appropriate $300 million for the Low Income Home Energy Assistance Program.

Fourth, we must provide as much insurance as possible against the likelihood of a crisis of this type happening again. I will introduce a bill to establish a regional petroleum products reserve in New England. The reserve will be available to ease the effects of severe price increases, and it will be funded through receipts from the naval petroleum reserves. The bill also requires private companies to establish industrial petroleum reserves to ensure that there is an adequate private sector supply of petroleum products.

Mr. Speaker, this comprehensive legislative response is not necessarily the final solution to this particular crisis or to situations like one that may happen in the future. Big oil and those who profit from the business of selling home heating oil, a necessity of life, should engage in some self restraint. The American people are generally willing to pay the price for a free market economy. After all that's what America is all about. But when that free market turns into a price gouging binge which affects the necessities of human life, the Federal Government will step in with sure, swift, and effective justice.

The Congress must act now, to ease the impact on those who have suffered and to ensure that this situation will not reoccur. I urge all members to cosponsor these bills and support this effort to address this dire emergency energy crisis.

INTRODUCTION OF THE CHAMA RIVER GATEWAY LEGISLATION

HON. BILL RICHARDSON

OF NEW MEXICO

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 23, 1990

Mr. RICHARDSON. Mr. Speaker, the Chama River Gateway region is one of most attractive hidden treasures in northern New Mexico. Hundreds of prehistoric and historic landmarks exist that are of national significance. Scenic landscapes in the area are unmatched. Anyone who visits the area will surely be fascinated by the mystery of the past and the scenic beauty of the present.

In the past, I have worked with the Congress to successfully designate a segment of the Rio Chama River, located within the Chama River Gateway region, as wild and scenic. Today, I am introducing legislation to establish the "Chama River Gateway", a series of interpretive trails and a visitor center that would allow visitors to experience the rich cultural heritage of the Chama River Valley region.

Few people realize that 12,000 years ago small bands of hunter-gatherers traveled with the seasons through the Chama area. These early groups hunted and foraged for thousands of years before a reliance on domesticated plants allowed for a more settled way of life. However, these early settlements were abandoned by the time the Spanish arrived.

Spanish settlement in the Chama River Valley began in the early 1700's but was relatively sparse. Navajo, Commanche, Utes, and Apache also used the area for hunting, grazing, trading, and occasional raids. The combination of Indian, Spanish, and more recent anglo heritage make the Chama River Valley a multicultural bonanza.

The legislation I am introducing today directs the Forest Service and the Bureau of Land Management, to develop a program of interpretation and visitor education so that the rich cultural heritage of the Chama River Valley is available to all. The concept of a "Gateway to the Past" visitor center where visitors can learn about the cultural resources and pose questions about the past is a key component of the development program.

Visitors will also be able to enjoy interpretative trails pointing out ancient Indian ruins, archeological and historic sites, and scenic views in the area. The Forest Service and the Bureau of Land Management will cooperatively manage the area providing tours, talks, and exhibits for the public. I urge my colleagues to support this legislation and provide a valuable historic resource for our Nation.

CONVOCATION REMARKS OF DAVID W. BROWN ON SEPTEMBER 13, 1989

HON. RICHARD J. DURBIN

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 23, 1990

Mr. DURBIN. Mr. Speaker, I am submitting the following convocation remarks by David W. Brown, president of Blackburn Community College, in Carlinville, IL.

It is with great pleasure that I submit the following remarks, which reflect President Brown's attitudes about the role higher education institutions play in preparing students for a multicultural and interdependent world.

CONVOCATION REMARKS OF DAVID W. BROWN ON SEPTEMBER 13, 1989

I accept with pleasure the office of President which this ceremony confirms. On this occasion, I should first acknowledge those women and men who have come before us in the long history of Blackburn—who watch now what we will do with their distinguished legacy. I should next acknowledge all of you who are here, our trustees, faculty, students, staff, alumni, neighbors and friends of Blackburn who want this College to have a distinguished future. My charge and opportunity as Blackburn's new president is to keep the faith with those who have come before us and to earn your support for the hard work we share in making Blackburn an exemplary learning community. A ceremony today can confer authority of presidential office on me but for authority to have real consequence, it must be earned every day. And that I will try to do. Alice and I have come here to serve your community—a community not of our making but of yours and the loving ghosts who watch all of us now.

What then will become of Blackburn? Let me begin by noting that no matter how old an institution may be, each generation who volunteer to sustain that institution's traditions and provide for its future must make their own case that there is a vital connection between what the institution offers and what our larger society needs. Without that vital connection, institutions falter, fail and finally disappear. Their history alone cannot sustain them. Like the authority conferred on me today, the authority of an institution must also be earned every day by what it does for what needs doing in the larger society which it presumes to serve. Part of leadership then is for me to make clear on behalf of the College that there is a vital connection between what we offer and what our society needs. Let me begin to do that now.

During the past several years I have written and lectured on the need to prepare young women and men for a world that will be increasingly multicultural and interdependent. It will be a world in which the individual, no matter how much he has paid for his educational credentials or how well trained she is for performing specific skills, will be relatively powerless to effect change unless they have also been educated to work together for their common good. That is why I said recently, "to empower young women and men requires that they first learn how to empower each other through shared forms of membership and enterprise. What is at stake is an idea about the kind of education they need for the kind of world that is coming. . ."

Most institutions of higher education today only focus on individual empowerment. They establish competitive, rather than cooperative, learning environments where students are tested on their individual abilities to survive alone. They are rarely offered any learning structures of membership and enterprise on campus that resemble the complex organizations and diverse communities which await them after graduation. It is like teaching a public office

holder how to draft a legislative bill without any instruction on how to get elected in the first place. It is like teaching a business executive how to sell a widget without any instruction on how to motivate employees to produce a good widget so it can be sold.

The consumer model, as I have called it, in higher education assumes a relatively unchanging society where the individual is educated to be self-sufficient, equipped to succeed on his or her own. It reflects the long prevailing American ethos that celebrates individualism. But it ignores the long prevailing American experience that we rarely accomplish anything of significance solely by ourselves. Those on the frontier shared in the work of helping a neighbor put up a needed barn; diseases were conquered by public health measures that required most everyone's cooperation, shoemakers had to come together in Massachusetts to improve their work conditions; Texas farmers learned to form cooperative alliances to gain access to better markets; black church members advanced the cause of civil rights only when they were all willing to boycott the city buses in Montgomery, Alabama. But more important than clarifying our history, is to take note of our future. The American experience of mutual dependence is bound to become even more central as urban areas grow, environmental concerns increase and economic markets become truly global.

The consumer model in higher education offers a coveted undergraduate degree but it is not enough. It is why so many young women and men, that I know, still feel the ache of powerlessness despite their individual accomplishment of getting ahead. The prevailing consumer model does not challenge them to explore ways of coming together, of working together on common problems. So they find themselves ill-equipped for influencing events or solving collective problems in the workplace, in the neighborhood, in the environment, or in international exchange. Collective problems require collective action. An individual's credentials and skills are not enough. Collective problems require a common effort mobilized by those educated to cope with the diversity of race, gender, religion and ethnic identity, by those who have already learned from the experience of membership in a community what it means to share a commitment, serve interests beyond their own, and contribute to a common good.

There seem to be few colleges and universities which are intent on developing the habits and lessons of community life. Furthermore, many young women and men who enroll are without any compensating experience of their own. Increasingly, they may be from families which have broken up. They no longer have any contact with church membership. They don't know what it means to be a member of any private association. College life may be the first and the last time when there can be an intentional effort to have them be part of a community, to learn what it means to be a member, to look out for more than just themselves. We can no longer take for granted that they will learn about such things somewhere else.

And this is where Blackburn has so much to offer as we use our work program and attentive staff and faculty to build community right here during a student's important undergraduate years. Flawed and confused as any community will be, we have the conditions necessary to provide a campus laboratory, so to speak, that is both multicultural and interdependent. Although the community model is an alternative to the consumer model, it does not ignore the need for educating the individual mind and developing individual skills. It does these things, however, within the context of an intentional community. It is the community context that approximates the organizational life and collective problems that our graduates will confront when they leave here.

I hope that I can help make Blackburn's community model more visible, something that is engaging for people both here and for those looking for such an enterprise. So that at one place, at one time in a small college in this vast country, a vital connection is made that addresses the needs of the larger society of which we remain inextricably a part. If the community model can be made to work here for the sake of our students and the kind of world that is upon us all, then we have the answer to the question I began with, "What will become of Blackburn?"

TRIBUTE TO AL TEGLIA

HON. TOM LANTOS

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 23, 1990

Mr. LANTOS. Mr. Speaker, I rise today to pay tribute to my dear friend, Al Teglia, on the occasion of this retirement after 37½ years of loyal and dedicated service to the Mateo Union High School District. Al has been operations manager, and he holds the longest tenure in the school district. His service to the schools of San Mateo County represents the highest and finest tradition of public service.

Mr. Speaker, Al Teglia was born in the city of Colma in San Mateo County of Genoese immigrant parents in 1931. He grew up in Daly City, attended Jefferson High School and then the College of San Mateo. Upon graduation he began work with the San Mateo Union High School District.

Al has served the people of our peninsula in a number of key posts. He has been elected a Daly City Councilman for three terms, and he held the office of Daly City mayor three times. Al is a member of the San Mateo Council Transportation Authority, the SamTrans Board of Director, and numerous other boards and commissions serving the citizens of our peninsula. He also was elected to three terms as members of the board of trustees of Jefferson Union High School, president of the San Mateo County School Boards Association, and delegate to the assembly of the California School Boards Association. Al Teglia has served our peninsula community on the boards of the San Mateo County Historical Society, the Daly City-Colma Historical Society, the San Mateo County Arts Council and many other organizations.

In 1988, he received the Columbus Award of the San Mateo County Italian American Federation, and in 1985 was given the Humanitarian-of-the-Year Award from the San Mateo County Easter Seal Society. He has been honored by the Daly City Jaycees, the Hispanic Concilio of San Mateo County and a number of other community groups and organizations.

Mr. Speaker, I invite my colleagues in the Congress to join me in paying well-deserved tribute to my constituent and dear friend, Al Teglia, on the occasion of his retirement from the San Mateo Union High School District. It is also our sincere hope, however, that Al will continue his dedicated and active involvement in community service for the residents of our peninsula.

TRIBUTE TO DR. RALPH WYATT ADAMS

HON. WILLIAM L. DICKINSON

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 23, 1990

Mr. DICKINSON. Mr. Speaker, as we move into the new year, I would like to note the accomplishments of a special Alabamian who retired in 1989, Dr. Ralph Wyatt Adams of Troy, AL.

Born on June 4, 1915, at Samson, AL, Dr. Ralph Adams received his A.B. degree from Birmingham-Southern College, then the LL.B., LL.D., and J.D. degrees from the University of Alabama. He is married to Dorothy Kelly Adams and they have three grown children.

On September 1, 1989, Dr. Ralph Adams retired from the duties of both president of Troy State University and chancellor of the Troy State University system. He had assumed the duties of president of Troy State University on October 1, 1964, after completing a long, honorable tour of duty with the U.S. Air Force, the U.S. Air Force Reserve, and the Alabama Air National Guard. He retired from the military as a major general on June 3, 1975.

Dr. Adams served under President John F. Kennedy as head of the Alabama Selective Service System, then under President Gerald R. Ford as a member of his Presidential Clemency Board. He has also served as chairman of the council of presidents for the Alabama Commission on Higher Education, the Alabama State Personnel Board, and the Alabama State Insurance Board. He has also served as president of the Alabama Association of College and University Presidents. Indeed, a list of his positions of responsible leadership could be continued at great length.

Through his performance as a community and academic leader, Dr. Ralph Wyatt Adams has distinguished himself by securing many noteworthy honors. He was Man of the Year for Troy, AL (in both 1968 and 1975); distinguished alumnus of Birmingham-Southern College in 1978, and designated one of the top 100 Most Effective College Presidents by the Exxon Education Foundation in 1986. For his dedication to the enhancement of the multicultural education program on his campus at Troy State University, Dr. Adams received the Order of the Rising Sun from the Government of Japan in May 1989.

Dr. Adams has attracted many scholars of international acclaim to address Troy State University students, and through his close association with the English-Speaking Union, Dr. Adams was named to the National Board of Directors of the English-Speaking Union in the USA. Ever since 1972, Troy State University has provided a full 1-year scholarship to a student from England. The criteria for receipt of

this scholarship has been that the person must have been accepted for entrance at either Oxford or Cambridge, and be identified as a person who could conceivably become a Prime Minister. The Troy State University campus has been most fortunate to have had some truly outstanding scholars and students leaders among alumni of this program.

As a companion to the scholarship opportunity for an English person to Troy State University each year, Troy State has sent two students each summer to the annual English-Speaking Union summer program at Jesus College, Oxford, entitled "Britain Today."

Dr. Adams also initiated somewhat similar programs offering scholarships to outstanding Japanese university students who are nominated by the America-Japan Society and to German university students nominated by the German-American Friendship Clubs of the Federal Republic of Germany. These programs are continuing to show great rewards for the students chosen, for the students and faculty of the Troy State University main campus, and for better cultural understanding of all societies concerned.

I take particular pride in inviting the attention of the Congress to this outstanding citizen of Alabama who has successfully opened the minds of our young people to the fresh realm of international living and multicultural education.

BLOODSHED AND VIOLENCE IN AZERBAIJAN MUST BE BROUGHT TO AN END

HON. WM. S. BROOMFIELD

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 23, 1990

Mr. BROOMFIELD. Mr. Speaker, as we follow the Soviet Government's efforts to bring stability in Soviet Azerbaijan, and when we read about the deaths that occurred, the large anti-Soviet demonstrations by the Azeris, and their threat to secede from the Soviet Union, it is important to keep this event in perspective.

It is important to remember that until the Soviet troops went into the Azerbaijani capital of Baku, a brutal anti-Armenian pogrom was taking place in that city. Some 60 people were killed and about 150 people were injured—the majority of whom were Armenians. There were reports of Armenian neighborhoods being ransacked, and Armenians being attacked by mobs of Azeris, being burned alive and hurled from balconies.

In other parts of Azerbaijan, Armenian communities were forming guerrilla units and were becoming armed camps with protective trenches as they prepared to protect themselves from Azeri attack, and the term "civil war" was becoming used more and more. Automatic rifles, machine guns, helicopters, and armored personnel carriers were utilized in battle between the communities. Since last June, an Azeri blockade of rail lines and roads into earthquake-damaged Armenia and the Armenian community of Nagorno-Karabagh stopped needed food and supplies from reaching the Armenians.

I fully agree with the President that the Soviet actions are fully understandable. As the administration stated, "It is the responsibility of any government to maintain order and protect its citizens." As the administration further pointed out, "the effort to establish order should not become a cloak for the abridgment of the exercise of political rights."

Mr. Speaker, the reestablishment of stability in Azerbaijan and the breaking of the blockades of Armenia and Nagorno-Karabagh, however, must not be the end of Soviet efforts in the Transcaucuses. The issue of the political administration of the Armenian-populated region of Nagorno-Karabagh must be resolved or this will constantly serve as a source of trouble in the relationship between these two Soviet Republics.

Under the administration of Azerbaijan, the people of Nagorno-Karabagh have had to endure second-class citizenship in their own province. They have been subjected to cultural oppression, cut off from Armenian-language mass media, and forbidden to teach the Armenian language in their schools. When economic support was provided by Moscow to the Azerbaijan region, Nagorno-Karabagh got the leftovers. It is no wonder that they have shared the dream of their cousins in Armenia of wanting to once again be under the political administration of Armenia, and have sought the right of self-determination within the Soviet Union.

I would certainly hope that this bloodshed and violence directed against the Armenians in Azerbaijan will be brought to an end, and I encourage President Gorbachev to go to the heart of the matter in helping to resolve the issue of Nagorno-Karabagh. It is hard to see how lasting peace can be brought to this area until this is done.

TRIBUTE TO TROOP 44'S EAGLE COURT OF HONOR

HON. JAMES A. TRAFICANT, JR.

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 23, 1990

Mr. TRAFICANT. Mr. Speaker, I rise today to pay tribute to Boy Scout Troop 44's Eagle Court of Honor of my 17th Congressional District. On November 27, 1989, the Fall Court of Honor Troop 44 had three members receive the highest award possible in scouting, the Eagle Scout Award. The three young men receiving the prestigious award were Stephen E. Morris, Michael E. Colyer, and John Zastany.

Stephen E. Morris is 17 years old and has been a member of Troop 44 since 1983. He has earned 21 merit badges, the 50 Miler Award, Mile Swim, and the World Crest. Stephen plans to attend either Miami University or Ohio State University and wants to major in systems analysis.

Michael E. Colyer is 16 years old and has been a member of Troop 44 since 1984. He has earned 24 merit badges, the Mile Run, the Mile Swim, 50 Mile Award, and the World Conservation Award. Michael is a junior at Poland Seminary High School and is a member of the Delta Society with a 4.0 grade point average. He plans on attending the U.S. Naval Academy.

John Zastany is 18 years old and has been a Boy Scout since 1982 and joined Troop 44 in 1989. He earned 22 merit badges, the Alpha Omega Religious Award, Senior Patrol Leader Medal, and the Stambaugh Emblem. John is a graduate of Cambpell Memorial High School and is presently attending Youngstown State University. He is majoring in math and secondary education and plans to complete Army Reserve Officer Training as second lieutenant.

I would also like to commend Ray Slaven who has been Scoutmaster for Troop 44 for 27 years. Through his time and inspiration Mr. Slaven has helped 88 Scouts achieve the Eagle Scout Award.

Mr. Speaker, I would like to take this opportunity to congratulate Stephen E. Morris, Michael E. Colyer, and John Zastany on achieving such a prestigious award. The hard work and dedication they have shown is no doubt an indication of their future success. I am proud to represent all these outstanding individuals.

MILITARY AID TO EL SALVADOR

HON. GLENN M. ANDERSON

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 23, 1990

Mr. ANDERSON. Mr. Speaker, I believe today that it is time to reevaluate our policy in El Salvador. A decade has gone by and billions of dollars have been spent in the effort to establish a democracy in that war-torn country. Once more, we are confronted with funding a government whose military is admittedly involved in the murder of civilians. Once more, we must ask ourselves the tough question of whether it is right to provide U.S. tax dollars to a death-squad supporting military fighting an equally violent leftist guerrilla group. We long for a democracy in El Salvador. So, while our case is noble, the means to that end appear questionable.

We have tried to turn the Salvadoran military into a force capable enough to defeat the FMLN guerrilla movement. I will have to say that effort has not succeeded. While the recent FMLN offensive was a failure, it still demonstrated that the FMLN continues to grow in strength. But worse than our failure to achieve our military goals is the fact that we have created a monster in the process. The military, supplanting the oligarchy, has become the dominant political player. Corruption runs rampant, with nonexistent soldiers receiving pay and officers running extortion rackets.

We have given the military guns and helicopters, but not taught the responsibility those weapons imply. We have given bullets without an accompanying sense of democratic duty and values. The United States-created Salvadoran military is a monster because its ends are only to see itself stronger and more powerful. We hope for a democracy, with armed services who will be that democracies protector. What we get is a military seeking only to protect itself.

While our intentions in El Salvador are good, the means defeat the purpose. Support

for the FMLN will disappear when civilians can look to the military for support, not repression. I hope that in the upcoming session we will listen to our past promises of restricting aid if the military does not reform. Or else, I fear that the killing of nuns and Jesuits, opposition candidates, and labor organizers, of peasants and merchants will continue. Our constituents support democracy, but not the way we are trying to achieve it. The Salvadoran military must know that the American people and their elected government will not stand for the killing of civilians and political opponents.

IN MEMORY OF PATRICK POUZAR

HON. BOB CLEMENT

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 23, 1990

Mr. CLEMENT. Mr. Speaker, I would like to pay tribute to Patrick Pouzar, a gentleman from the 5th District of Tennessee who died tragically earlier this month while in service to our country.

Patrick Pouzar of Nashville was on a mission in the Republic of Chile in his capacity as a senior investigator for the U.S. Food and Drug Administration. Mr. Pouzar was traveling with another FDA official and representatives from the Chilean Government and a fruit export association when the light aircraft that ferried them to the fruit-producing region of northern Chile disappeared.

Mr. Pouzar and his party were in Chile at the request of that government to visit several cities and to observe the various security measures that have been taken to ensure the safety of fresh fruit during processing for export.

Many Americans recall that last spring, the FDA halted the importation of Chilean-grown grapes and other fruit products following the discovery of grapes which contained traces of cyanide. That revelation led the Chilean Government to incorporate new protective and emergency measures to avoid contamination of or tampering with fresh fruit. It was those actions that prompted a format invitation from the Chilean Ambassador last November to the FDA for an inspection tour. Because of Mr. Pouzar's involvement with the fruit-tampering incident last year, he volunteered to undertake this mission.

Patrick Pouzar's career with the FDA spanned more than 26 years. His professionalism and special dedication to his work earned him tremendous respect from his peers and subordinates and a succession of career promotions. At the time of his death, Mr. Pouzar was stationed at FDA's Nashville office, where he served as the director of a field investigative unit. Although last year's fruit crisis had no direct effect on the operations at the Nashville office, he willingly offered his services in the management of this episode. For his contributions, Mr. Pouzar received FDA's award of merit for outstanding dedication and personal sacrifice in conducting foreign inspections to assure the safety of fruit exported to the United States.

Mr. Speaker, we often overlook the men and women in our civil service who, like Patrick Pouzar, confront dangerous working conditions to complete their tasks. Their service is integral to promoting the general welfare. Regretably, it is on occasions when tragedy has befallen one of these individuals that we remember to thank them for their work.

On behalf of all of the citizens of the 5th District of Tennessee, I want to extend our deepest sympathies to Patrick's wife, Judy, and to his daughters, Paige, Lori, and Emily.

TREAT ME LIKE A DOG, PLEASE!

HON. FORTNEY PETE STARK

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 23, 1990

Mr. STARK. Mr. Speaker, the January 12, 1990 issue of the American Medical Association's newspaper contains an article which starts as follows:

When the patient began losing his eyesight, he was taken to an ophthalmologist. He was then referred to a neurologist who did a computed tomographic scan. The scan showed a large pituitary tumor, which was declared inoperable. But the patient started radiation treatments, and after his 18th visit, a new CT scan revealed that the tumor was gone.

The patient, a 13-year-old pointer [dog], could go back to chasing squirrels.

Mr. Speaker, I love cats and dogs. That is why I am worried about the AMA's headline on this story, which reads, "Animal medical care now rivaling treatment level delivered to humans."

I hope not.

In all our congressional districts, mothers give birth without ever seeing a doctor. People who cannot raise a cash deposit are turned away from hospital emergency rooms to die. Nursing home costs devastate families and lead to suicide.

I wouldn't want to treat a dog like that.

In 1990, I would hope we could resolve that all human animals have access to quality health care. Surely a society that can spend over $5 billion on pet health care can find a way also to provide health insurance for everyone.

WILLIAM G. THOMAS, NEW MARITIME PARK SUPERINTENDENT

HON. NANCY PELOSI

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 23, 1990

Ms. PELOSI. Mr. Speaker, on January 26, 1990, many San Franciscans will gather to congratulate Bill Thomas on his work in behalf of our national parks and to welcome him to his new post as superintendent of the San Francisco Maritime National Historical Park. I would like to enter my comments honoring Bill at this event into the CONGRESSIONAL RECORD:

Bill Thomas is an old friend to San Francisco.

Years ago, he worked with Congressman Phillip Burton to create the GGNRA and now he stands before us as the superintendent of a new national park for our city.

There is the popular conspiracy theory—that this was the plan all along. Knowing Phil Burton, it would not surprise me.

When you look over the achievements of Bill's past, it is clear that his life's work was leading him to this point.

From his early journalism days to his work with Phil to create the GGNRA, and then with the National Park Service, Bill was destined to this post.

I can think of no better person to lead the maritime park. With the combination of public relations skills and park knowledge, to say nothing of what he might have picked up from Phil Burton, Bill will be a great success.

It's good to have Bill looking after the historic ships. The fleet is an important resource that deserves our attention, as community supporters as well as national park users.

The maritime park now has an excellent superintendent and the planning process for its future is underway. Let's all work with Bill to make this a good example of what an activist community can do to preserve this national treasure.

PROTECT CHINESE STUDENTS

HON. JOE BARTON

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 23, 1990

Mr. BARTON of Texas. Mr. Speaker, recently I received a letter from Mr. Xun Ge a student at Texas A&M University located in College Station, TX, which is in my congressional district.

For the information of my colleagues, I am inserting into the RECORD the following letter from Mr. Ge. This letter will show that Chinese students are not victims of political repression in China—they are the target of it.

Hon. JOE L. BARTON,
U.S. House of Representatives,
Washington, DC.

DEAR REPRESENTATIVE BARTON: My name is Xun Ge, a graduate student in Physics Department Texas A&M University. I came to Texas A&M University on Aug. 15, 1986 with a F-1 visa. I have been in Texas A&M for three years, current GPA is 3.9. I was born in Beijing, China on July 12, 1959 and grew up in Beijing. My mother, my sister and a little nephew are still in Beijing now. I'd like to tell you some stories I have experienced.

Before I came to Texas A&M University, I worked in the Institute of Atomic Energy. At that time (in 1985) I had a good friend and colleague Mr. Xuetian Tang. We worked together in the same department. In 1984, Mr. Tang visited West Germany for about one year and stayed in Japan for a short period of time. During his visit in West Germany, he experienced the atmosphere of freedom and democracy. He admired this. Then he wrote a letter with some others to Mr. Deng Xiaoping to express his own idea. Not long after, the Communist Security Bureau sent men to my Institute to investigate Mr. Tang (you know this is very serious), and forced him to come back. Unfortunately he came back. After he came back, the Communist Party asked him

to do a lot of things he did not want to do, such as self criticism. He had to report his activities to the police. He could not travel freely. Therefore, he felt that he was under great pressure. For several months he could not sleep well. Finally he committed suicide by hanging himself on one dark night in his small apartment. On his desk the last thing he wrote was an unfinished application to attend an academic conference in Brazil. He knew there was absolutely no chance for him to go. He was a very good theoretical physist, did a lot of beautiful research work. He died and left his two young children behind, left his aging mother in a small mountian village.

Now think about our Chinese students are facing right now. We are facing even worse situation than Mr. Tang was. I have another friend Mr. Juntao Wang. We were in the same study group. He graduated from Beijing University, which has the tradition of Freedom and Democracy. He is 31 years old, young and smart. He was on the top of the Communist Party most wanted list, because he went to the peaceful demonstration in May. He was just arrested several days ago. I really hope he can endure the dirty Chinese jail and harsh torture. From these stories, it is not hard to understand why we, Chinese students, would like to send our highest appreciation to you for your support the legislation to protect Chinese students studying here in the United States. As you know, a lot of Chinese students' visas will be expired soon, and the most important thing is, they are deeply involved in the demonstration demanding the basic human rights in China. We really need the legislation be passed as soon as possible.

Now the Chinese Government is continuing to punish the people who participated in the pro-democracy movement this spring. At this moment, should the United States continue economic aid and loans to China? Should the United States continue high-tech transfer and military aid to China? The answer is NO. It is really hard to understand why more than 30 Chinese engineers resumed their work to modify F-8 fighters in New York State. As a Chinese student, I know Chinese people don't need F-8 fighters. What we need is the American people's support for our freedom and democracy, to stop severe repression and killing by the Communist Party. Economic sanctions against China are very necessary. I hear American people say: "China will not be free until America moves." That is true! The people killed in Tiananmen Square and in Beijing will not die in vain. We'll continue our struggle for basic human rights in China. We, Chinese people say:" "Give me liberty or give me death".

I watched the TV news recently, tears came down from my eyes. I strongly believe that today's East Europe will be tomorrow's China.

Yours sincerely,

XUN GE.

TRIBUTE TO JANET SAINER COMMISSIONER, NEW YORK CITY DEPARTMENT FOR THE AGING

HON. THOMAS J. DOWNEY

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 23, 1990

Mr. DOWNEY. Mr. Speaker, as the chairman of the House Select Committee on Aging's Subcommittee on Human Services, I am very proud to pay tribute to an individual who has become a legend among New York City's senior citizens. Janet Sainer, who has served as commissioner of the New York City Department for the Aging for the past 12 years, will be leaving her position this year. It is my pleasure to share Janet's extremely successful career with my colleagues, who I know join me in wishing her all the best.

First, I must tell you a little about the department that Janet has administered for over two decades. The New York City Department for the Aging, originally established 22 years ago as the Mayor's Office on Aging, became the Nation's largest area agency on aging in 1975. This agency has as its mission improving the quality of life of more than 1.3 million New Yorkers who are 60 years of age and older. To help maintain the independence and dignity of Older New Yorkers, the department, under the Older Americans Act, and through State and city funds, supports a broad range of services. Most services are provided through contracts with community-based agencies. Others are programs directly operated by the department.

During Janet's tenure as commissioner, the New York City Department for the Aging saw many changes come about. New services and programs were made possible not only with Federal funds, but State and city resources as well. State funding was provided for recreation and cultural activities at the local level, as was additional support for elderly crime victims assistance. In 1979, New York State enacted the Community Services for the Elderly [CSE] program, providing additional funds specifically targeted to serve the frail elderly in areas of homecare transportation, and expanded home delivered meals.

While the 1970's saw tremendous development in new programs for the aging, by the early 1980's, cutbacks in Federal funds brought this growth to a standstill. Had the city not stepped in, at Commissioner Sainer's request, to ensure that support for aging services would be sustained, there would have been a critical reduction in services at that time. During the 1980's, State resources for services were expanded through two new programs, the Supplemental Nutrition Assistance Programs [SNAP] for additional services to the nutritionally at-risk elderly and the Expanded In-Home Services for the Elderly Program [EISEP], which provided State funds for the first time, for nonmedical, in-home services for the near-poor elderly who do not meet Medicaid eligibility criteria.

Janet Sainer has been a responsive administrator of the New York City Department for the Aging and has helped to raise public awareness of concerns of the elderly, locally as well as nationally, by leading and participating in, conferences, presenting testimony before Congress and other legislative bodies, and by broad outreach and public relations campaigns. I am proud to say that Commissioner Sainer has appeared before the House Select Committee on Aging at least eight times testifying on subjects from Medicare to the needs of the low-income and minority elderly. In addition, Janet has been recognized internationally in the field of aging, having been appointed as a board member of the Brookdale Institute of Gerontology and Adult Development in Israel. Janet has also helped to increase the department's responsiveness to the needs of the elderly in New York through community-based planning, and she developed additional resources by stimulating public/private/voluntary sector involvement.

During Commissioner Sainer's administration, she was responsible for many new Department initiatives, which include:

1. CITYMEALS ON WHEELS.

This new partnership was formed with public, private, and voluntary sectors whose annual donations—$4.3 million last year—and pro bono activities have brought this supplemental nutrition program for the homebound elderly from 6,000 holiday meals in 1981 to more than 700,000 weekend, holiday, and emergency meals in 1988. Citymeals on Wheels is the mode for the national Meals on Wheels America, a new nutrition program for the homebound elderly now in 30 cities across the Nation.

2. ALZHEIMER'S RESOURCE CENTER

This center is the first municipal counseling and referral program for patients and families of patients.

3. JOB AND TRAINING OPPORTUNITIES

Commissioner Sainer worked with the private sector to expand employment opportunities for older people through such programs as the Ability Is Ageless Fair, Job Search Club, Senior Employment Service, and subsidized programs.

4. HEALTH PROMOTION

The New York City Department for the Aging has community hypertension control, education, and self-help programs to foster better health among the elderly in 87 senior centers.

5. PARTNERSHIP FOR ELDERCARE

I was proud to have been part of the inaugural luncheon for this new program, which was established for the growing number of working people who are also caring for elderly relatives. Partnership for Eldercare was designed to provide counseling services on available community services. It also offers education and training on aging issues to employees groups in the public and private sectors, as well as personnel responsible for employee relations.

6. FOSTER GRANDPARENT PROGRAM

Under Janet's direction, new initiatives were developed which utilize foster grandparents in services to AIDS babies, those in danger of child abuse, boarder babies, and other at-risk children.

7. HISPANIC ENHANCEMENT PROGRAM

This new program was established for Hispanic elderly in order to increase their access

to entitlements, benefits, and services, including the Hispanic Helpline which responded to over 10,000 New Yorkers in the past year, and English as a second language classes, conducted in selected senior centers. This unit also provides technical assistance to community-based minority programs throughout New York, and is responsible for translating all major department publications.

8. INTERGENERATIONAL WORK/STUDY PROGRAM

This dropout prevention program, conducted in cooperation with the New York City Board of Education, helps high school students gain work experience while providing services to the elderly in 82 senior centers and senior programs. It was initiated with private resources and 18 months after its inception it became a program supported by the city.

Janet Sainer's professional career has been one of excellence and commitment to the aged. Her professional affiliations include:

Gerontological Society of America, treasurer;

Health Systems Agency of New York City, member, board of directors;

National Council on Aging, member, board of directors;

Brookdale Institute of Gerontology and Adult Human Development in Israel, board member;

Member of the U.S. Commissioner on Aging's Task Force on Public/Private Services Initiatives;

National Resource Center on Health Promotion and Aging of AARP, board member;

New York City Transportation Disabled Committee, board member;

Chair, Interdepartmental Council on Aging of New York City.

Commissioner Sainer has been recognized many times in her career for her work on behalf of the elderly. Among her awards are the Presidential Citation for RSVP; the Community Service Award from the National Council on Aging; New York State's Association for Human Services Award for Outstanding Community Service; the Distinguished Service Award from the Wurzweiler School of Social Work; the Humanitarian Service Award from the Hebrew Home for the Aged in Riverdale, NY, and she has been elected to the Hunter College Hall of Fame.

Prior to becoming commissioner, Mrs. Sainer directed aging programs for 14 years at the Community Service Society where she developed a demonstration program that led to the establishment of the Retired Senior Volunteer Program [RSVP]. RSVP is currently operating in some 700 communities across the country and has now been established abroad as well. She also developed the Jamaica Service Program for Older Adults [JSPOA] and the Community Agency for Senior Citizens [CASC] on Staten Island.

There is so much that could be said about Janet Sainer. She has been a valued resource for so many. She is an accomplished author, and has presented papers at many conferences across the Nation. Her counsel has guided so many city, State, and Federal officials, aging professionals, geriatric students, and everyday citizens to better understand the aging process. She had been a hands-on commissioner, one who has not been timid at taking a stand in order to help the thousands of seniors in need of services and assistance.

Commissioner Sainer leaves with a record of accomplishment that will endure for years to come. She recognized that hers was an important mission, namely, to improve the quality of life for New York City's large, diverse, and growing elderly population. She did this and more. She provided leadership in the city, and her example allowed her to be a national and international spokesperson on aging issues.

The Older Americans Act established during the early 1970's what is now known as the aging network. It consists not only of State and area agencies on aging, but providers of service as well. Area agencies on aging exist in more than 670 communities around the Nation. Yet, the single largest one was run by Janet Sainer these past 12 years. She set the standard for what an area agency should be. It is a unit of local government which coordinates a service plan to meet the needs of its at-risk population. It works to leverage all forms of financial support for services, the public dollar, the private dollar, the corporate dollar. No one has done it better than Janet Sainer these past 12 years.

It has been my honor to pay tribute to this remarkable, committed, compassionate, and indefatigable public servant. Janet Sainer is an advocate's advocate. She fights. She wins. Yes, sometimes she loses. But, she is always in there fighting for her constituents—the elderly. That is why there is such a reservoir of respect and affection for Janet as she moves on to new endeavors. The city and the State of New York as well as the national aging network have benefited from Janet Sainer's leadership. I salute her and wish her all the best for the future.

A NOAH'S ARK OF SPECIES

HON. GREG LAUGHLIN

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 23, 1990

Mr. LAUGHLIN. Mr. Speaker, today I want to take the opportunity to share with my colleagues an article about the Aransas Wildlife Refuge that appeared in the January/February edition of the National Geographic publication, Traveler. Although, it is well known in the State of Texas that Aransas National Wildlife Refuge in the 14th District is home to some of the most beautiful aviary wildlife in the country, the Traveler, which has an annual readership of more than 700,000, described the vastness and greatness of Aransas with an article entitled, "Avian Eden: Texas' Aransas National Wildlife Refuge." Aransas is a place where radiant white whooping cranes, great blue heron, ducks, alligators, javelina, and numerous other species make their home. Mr. Speaker, it truly is a "Noah's ark of species."

I would like to mention some of the highlights of Aransas featured in the article. The 60,000 acres plus of forest, grassland, and marsh have many gems of our National Wildlife Refuge System. Aransas is the winter home to the only flock of whooping cranes left in the wild, and when the whooping crane count dropped to an all time low of 16 birds in 1941 the concerned and informed wildlife management worked over the course of five decades to bring the count of this rare bird up to the more than 130 in existence today.

In addition, a visit to Aransas will allow the visitor to catch a glimpse of the many uncommon animals in its thousands of acres of marsh. This includes some of its 250 alligator's, gray foxes, cougars, bobcats, snow geese, hill cranes, black-necked stilts, spotted skunks, and innumerable other species.

Mr. Speaker, part of the reason why the Aransas Wildlife Refuge is one of the crown jewels of our Nation's Wildlife Refuge System is the hard work, and dedication of the game wardens and staff of the Aransas Refuge. As a native of this area I am pleased to bring the Aransas Wildlife Refuge to the attention of my colleagues in this Chamber. As the Congressman from the 14th District of Texas I am proud to have the Aransas Refuge in my district.

FATHER AND SON POLICE CHIEFS

HON. MATTHEW J. RINALDO

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 23, 1990

Mr. RINALDO. Mr. Speaker, I wish to call the attention of my colleagues to the contributions of father and son police chiefs in the community of New Providence, NJ.

On December 31, 1989, Chief James J. Venezia, Sr., officially retired from the New Providence Police Department after nearly 40 years of outstanding service in which he protected the lives, liberty, and property of the residents and businesses in this community of 13,000 residents. He helped to build its reputation as one of the safest communities in New Jersey.

What is unique is that Chief Venezia is being succeeded by his son, James, Jr., who for the past 4 years has trained many of the young men in the department. An excellent profile by Steven Coleman appeared in the Courier-News, and I ask that it be included in the RECORD.

NEW PROVIDENCE POLICE CHIEF HAD A GOOD TEACHER

(By Steven Coleman)

NEW PROVIDENCE.—James Venezia Jr. gave up his job in education for a police officer's badge 15 years ago, yet he never lost the desire to teach.

Venezia will take over as police chief here on Jan. 1, and he says skills he developed as a teacher at Union Catholic Regional High School in Scotch Plains in the early '70s have shaped his philosophy in law enforcement.

He will replace his father, James J. Venezia Sr., who spent nearly 40 years with the Police Department, the past 14½ years as chief. The elder Venezia suffered a heart attack in August and has been on sick leave since.

During the past four years, the younger Venezia has been responsible for training veteran officers and rookies in the 24-member department. He also has served as an instructor at the Union County Police Academy for the past nine years.

"I enjoy teaching," the 41-year-old acting police chief said. "Training and education are very important, and they add to the professionalism of the officer and his ability to perform effectively."

He also maintains that officers must be better-trained today to protect both themselves and their departments from lawsuits.

As chief, Venezia said the communication skills he learned teaching Spanish to high schoolers and the management skills he learned while serving two years as the school's athletic director will come in handy.

Venezia said his interest in law enforcement developed over time, adding that his father never pressured him into the field.

"One of the things he was good at was pointing out the pros and the cons of things and letting you make the decision," he said.

However, Venezia said his ability to work under his father has made their relationship much closer.

"When I was growing up, I didn't see much of my father because he was doing shift work," said Venezia, adding that his father would often work odd jobs during his time off to support his wife and four children.

Filling the shoes of his father won't be easy, Venezia said.

"It's a challenge," he said. "He ran a pretty efficient operation. The challenge of improving on that is what I face."

Venezia joined the department in September 1975. He was promoted to sergeant in 1980 and was assigned to supervise the detective bureau. He made lieutenant in 1982, and has been assigned to administrative services and training for the past four years.

The elder Venezia is retiring after seeing his town of 13,000 people become one of six communities in the state and 110 nationwide cited in the book "Safe Places for the '80s."

Since joining the department in May 1950, the elder Venezia has watched the department grow from a staff of just three officers. He was responsible for adding the positions of crime prevention officer and juvenile officer. Before becoming chief, he also served as the department's first detective.

"He was an open, fair individual who cared very much about the community and the department," the younger Venezia said.

IN HONOR OF THOMAS A. McNUNN

HON. VIC FAZIO

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 23, 1990

Mr. FAZIO. Mr. Speaker, I rise today to honor a longtime friend, adviser, and one of Solano County's most outstanding civic leaders, Thomas A. McNunn.

Born and raised in Nebraska, Tom moved to Solano County after serving with the U.S. Air Force in Korea. He started his postmilitary service career with the Vallejo Chamber of Commerce, and he remained there until he relocated to Vacaville in 1966.

As the chief executive officer of the Vacaville Chamber of Commerce from 1966 to 1989, Tom's progressive approach to economic development and community enrichment has greatly benefited Vacaville and Solano County.

With unending stamina, Tom has always worked extremely long hours and gone beyond the call of duty to provide service to his community. His former secretary of 10 years, Betty Ladd, said, "Tom's ability to dedicate endless hours to a good cause sets a very fast pace for the entire working staff."

Vacaville businessman Glen Miller also commended Tom for his "boundless energy, good attitude, and on-call devotion to community and civic endeavors." Mr. Miller praised Tom for applying these attributes to create "one of California's most outstanding chambers of commerce."

Tom has held many prominent community positions including: chairman of the local United Way Telethon, general chairman of the Vacaville Fiesta Days Committee, chairman of the Vacaville Onion Festival, director of the Solano County Private Industry Council, and Vacaville chairman of the Vaca Valley Hospital Fund Drive. Tom has also served as director of the California Association of Chamber of Commerce Executives, vice president of the Vacaville Art League, president of the Vacaville Host Lions Club, and president of the 20–30 Club. As one of Solano County's most generous volunteers, Tom has set a standard for others to follow.

As Tom leaves the Vacaville Chamber of Commerce after 23 years of distinguished leadership, Solano County pauses to say, "Thank you, Tom, for enriching our community and our lives; Solano County appreciates and respects your many contributions." Having worked with Tom for many years, I know firsthand the valuable and unselfish service he has given to Vacaville and the entire Solano County community.

THE BADGER-TWO MEDICINE ACT OF 1990

HON. PAT WILLIAMS

OF MONTANA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 23, 1990

Mr. WILLIAMS. Mr. Speaker, today I rise to introduce the Badger-Two Medicine Act of 1990. This legislation creates a congressional study area in the Badger-Two Medicine roadless area, and avoids costly court actions against the Federal Government.

My purpose is to avoid costly court action and further delay of a final determination of the management of this area. This will not be the first time that the Congress will have considered this legislation; it was included in the Montana Natural Resource Protection and Utilization Act of 1989, which passed both the House and Senate in the 100th Congress. That bill passed both the House of Representatives and the Senate on voice votes. The legislation was then vetoed by President Reagan, however, although the Badger-Two Medicine portion of the bill (section 12 2751) was not cited in the veto message.

I am again introducing this portion of the vetoed bill because the crisis Congress hoped to avoid with that legislation is about to be quickly upon us. Actions on the part of the Forest Service has threatened to circumvent congressional intent for the area and has started another round of conflicts with the Blackfeet Tribe and Montana's conservationists and sportsmen.

The land covered by this legislation is just south of Glacier National Park on the Lewis and Clark National Forest. The Badger-Two Medicine is not a typical portion of the national forest, however, because it is subject to treaty rights between the Federal Government and the Blackfeet Tribe. An agreement between the Federal Government and the tribe was consummated in 1896 and ceded the Badger-Two Medicine lands to the Government. This treaty also stipulated certain rights over the area which would remain with the tribe.

This area has been the subject of controversy regarding those rights for many years, and just recently the tribe contacted the Forest Service and indicated its desire to again assume control of the area. It is the tribe's belief that the agreement was a 50-year lease of the "Rocky Ridges" and not a cessation. The tribe has continued over these years to utilize the area for religious practices and the names of the land's peaks reflect the stories of Blackfeet legend. Morning Star Mountain, Badger Creek, and Two Medicine River are not just place names but pillars of the Blackfeet religion.

The Congress clearly recognized the very real possibility of conflicts with Indian treaty rights when it passed S. 2751 in 1988. Section 12 of that bill established a 3-year study in order to determine how management activities should take into account rights left with the tribe at the time of cessation. This approach was supported by the tribe. The Congress and the Blackfeet Tribe believed then, and I still hold, the best way to establish appropriate management is by involving the tribe in formulation of a joint management plan. Given the opportunity to have their rights considered in the Lewis and Clark National Forest management plan would go a great ways to addressing the tribe's concerns.

Failure to recognize this approach will almost inevitably lead, as the Congress believed, to a lengthy court challenge and needless expense for the Government and U.S. taxpayers. Recent actions by the tribe only validate that to push forward with the leasing approach, outlined by the supervisor of the Lewis and Clark Forest, creates conflict between the tribe and the Forest Service, conflict between the Congress and the Forest Service, and conflict between Montanans and the Forest Service, with no clear hope of resolution except in litigation.

The Forest Service has learned the hard way that redoing Forest Plans, Environmental Impact Statements, Environmental Assessments, Management Alternatives and Roadless Area Reviews is a duplicative, expensive, exasperating process. The legislation I introduce today says clearly that we want to avoid having the courts decide management this time around.

Contrary to the Forest Service's belief, proceeding with development is not the only option that they have. Discussions with the tribe and consultation with Congress prior to movement on any development is an acceptable and frankly much more prudent alternative

for protecting the public's clear right to decide the use of these lands.

It should also be noted that it is not only the tribe that has questioned development of the Badger-Two Medicine. The State of Montana's Division of Fish, Wildlife, and Parks has publicly expressed grave reservations about development in this area and the impact it would have on this Nation's second largest elk herd and largest Big Horn sheep populations, both of which rely heavily on the Badger-Two Medicine for their very survival.

Montana's conservationists and sportsmen have long advocated this area for inclusion in the National Wilderness Preservation system and do not support development.

The Congress appropriately and reasonably moved once to assure that in this case treaty rights are protected. With this legislation I am attempting to again do so.

TRIBUTE TO VINCENT RANIERE

HON. STEPHEN J. SOLARZ

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 23, 1990

Mr. SOLARZ. Mr. Speaker, the district I represent encompasses some of this Nation's most diverse and colorful ethnic neighborhoods. One such area which is especially known for its rich cultural flavor is the Bensonhurst community, located in the central portion of my congressional district.

Contrary to popular belief, great neighborhoods don't just happen; they are most often the product of hard work and dedication on the part of community activists. In Bensonhurst, such leadership and vision has been amply supplied over many years by Vincent Raniere, outgoing two-term chairman of Community Board 11. It gives me great pleasure to rise today to pay tribute to this wonderful man who will be honored on February 1, 1990, as he steps down from this position after 4 years.

Bensonhurst residents for the last 25 years, Vincent and his wife, Phyllis, are the proud parents of three children: Vincent, Jr.; Susan; and Geraldine. The family belongs to St. Frances Cabrini parish and has been active in parish organizations for many years. A member of the parish council, Vincent has also served as chairman of St. Frances' Home School Association and as coach and athletic director of the school's Little League through the years.

In addition to being a devoted family man, Vincent is one of those exceptional human beings who has dedicated much of his life to the benefit of the entire community in which he lives. His talents are well known, and the list of his accomplishments is long and distinguished.

Vincent has been a member of Community Board 11 since 1977. In addition to being chairman for 4 years, he has also served the board as youth chairman, budget chairman, and 1st vice chairman. A gentle, kind man, Vincent's cool head and warm heart have allowed him to lead the board through many tough community issues with sensitivity and intelligence.

In light of Vincent's long record of achievement, I am delighted to salute him for his efforts. I have been privileged to know him for many years and to count on his wise counsel and effective assistance.

Vincent is truly a man of the people and for the people who I am proud to count as a constituent and a friend. I look forward to working with him for many more years to come.

COMMEMORATING THE RETIREMENT OF RALPH J. GIONET

HON. SILVIO O. CONTE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 23, 1990

Mr. CONTE. Mr. Speaker, I rise today to pay tribute to a man who has served his community with notable distinction. The name of this great American is Ralph Gionet, and on January 26 a testimonial will be held for him in recognition of his retirement after more than 35 years of activity within the school department of Pittsfield, MA.

In 1954, Ralph accepted a teaching position at North Junior High School in Pittsfield. Since that time, he has held a number of educational posts, including teacher, guidance counselor, as well as department head for the occupational education division at Pittsfield High School: the position from which he now retires. Throughout the years, Ralph has established himself as a pillar on which his colleagues and students have leaned for support and turned to for guidance, and I am proud to note that he has always searched for ways in which he could do more for his pupils and community.

Some of the words used to describe this fine man include warm, professional, fair, and compassionate. I have been assured by the members of the department which he leaves behind that no one individual will ever be able to take his place, as his constitution consists of such a remarkable combination of caring and dedication, not easily found among most individuals.

As if his efforts on behalf of education were not enough, Ralph has consistently devoted himself to a wide scope of community services throughout the area I am fortunate to represent in Congress. These activities have ranged from coaching with the Boys Club Hockey League to acting as president of the Goodwill Industries Advisory Board, and even chairman of the parish council at St. Teresa's Church. The work he has contributed to these volunteer organizations stands as a shining example of concerned citizenship, and his actions should inspire all those who know him to emulate his splendid example.

Despite his active lifestyle, Ralph and his lovely wife, Elizabeth, have managed to raise five sons: Mark, Bruce, David, Alan, and Gary; each of whom was educated within the same school system of which their father has been a part these past 35 years. Undoubtedly, the experience of having a father as kind and attentive as Ralph has enabled each of the boys to better handle the adversities that life often presents, and has provided them with the tools needed to attain their highest goals.

To say that Ralph Gionet will be sorely missed is an understatement. To fill the shoes of such a committed individual is no easy task, but fortunately there are many who have learned from his example and will do their best to carry on his tradition of excellence. Nevertheless, considering Ralph's undying efforts on behalf of others, I doubt that we have heard the last of him. Besides his love for fishing and Agatha Christie novels, Ralph Gionet also has a love for people. Knowing that, I am sure he will continue to make a difference in our world, and thank God for that!

I salute you Ralph Gionet, and I wish you the most enjoyable of retirements.

INTERNATIONAL VISITOR MONTH

HON. BILL RICHARDSON

OF NEW MEXICO

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 23, 1990

Mr. RICHARDSON. Mr. Speaker, today, I am introducing a resolution designating September 1990 as "International Visitor Month."

This resolution recognizes an outstanding program, administered by the U.S. Information Agency, which brings foreign leaders to the United States to develop a more personal understanding of our people and culture. This program: Helps shape American foreign policy; draws on an array of experts to examine current domestic problems; complements the curriculum or elementary and higher educational programs nationwide; creates opportunities for international business ventures; brings money into American cities and towns; and, introduces American people of all backgrounds to future world leaders visiting the United States.

American Embassies overseas select only the most promising midcareer professionals to participate in the month long exchange program. Last year the program brought more than 5,000 visitors to our country. Once the visitors arrive, the members of the National Council for International Visitors [NCIV] carry out the program in communities in nearly every State.

This is a worthwhile program that deserves the Congress' support. I urge my colleagues to join me in cosponsoring International Visitor Month. The resolution follows:

INTERNATIONAL VISITOR MONTH

Whereas the United States Information Agency conducts educational and cultural exchange programs that bring current and future foreign leaders to the United States, often for their first visit;

Whereas the experiences of these visitors affect attitudes and decisions regarding our country and international relations in general;

Whereas the success of these programs depends on the visitors seeing American democracy in all its openness and diversity;

Whereas such broad and meaningful exposure requires thousands of volunteers, who open their homes, businesses, and communities to more than 5,000 visitors each year;

Whereas such volunteer efforts are coordinated by the 103 not-for profit community organizations throughout the United States, and the 42 national programming agencies which form the National Council for International Visitors;

Whereas these international visits not only enrich the United States and the world in cultural, social, and human terms, but also provide the United States and foreign nations opportunities in international trade, commerce, and economic development; and

Whereas the continuing vitality and growing value of such programs depend upon community awareness and support: Now, therefore, be it

Resolved by the Senate and House of Representatives of the United States of America in Congress assembled, That September 1990 is designated as "International Visitors Month". The President is authorized and requested to issue a proclamation calling upon the people of the United States to observe that month with appropriate ceremonies and activities.

PUTTING THE SECURITY BACK IN SOCIAL SECURITY

HON. RICHARD J. DURBIN

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 23, 1990

Mr. DURBIN. Mr. Speaker, today I am introducing legislation with Representative BYRON DORGAN to repeal the FICA payroll tax increase that took effect on January 1, 1990. I do so because the time has come to put an immediate end to the practice of using Social Security Trust Fund revenues to mask the true Federal budget deficit. If we cannot take stop this practice, then I think we must level with the American people and halt the increases in the Social Security payroll tax.

Simply put, the working men and women of this country are being misled. Each week, contributions to the Social Security Trust Fund are deducted from their paychecks. Most believe that these contributions are left in the trust fund to pay for their future retirement costs.

They are wrong. In fact, the revenues in the trust fund are invested in Government securities, providing a new and expanding source of revenue for the Treasury. Instead of using these trust fund revenues for their intended purpose, to build a reserve and stimulate future economic growth, Treasury has been allowed to use these reserves to mask the growing Federal budget.

What was supposed to be an exercise in good government has become nothing more than a budget device to disguise the true size of the Federal budget deficit. If you exclude the $68 billion in trust fund revenues for fiscal year 1990, we have a real budget deficit approaching $200 billion. If we put off taking these surplus revenues out of the budget process until after 1993, we will waste another $420 billion. In fact, if you discount this transfer of trust fund revenues, we have made little progress on reducing the budget deficit over the past several years.

This practice should not be allowed to continue. It removes discipline from the budget process, since the growing revenues from the Social Security Trust Fund enable us to meet the Gramm-Rudman targets without cutting spending. It uses a regressive payroll tax to fund an increasing share of Federal spending, continuing the trend toward an inequitable Tax Code. And it deceives the working men and women of this country into thinking that their retirement savings in Social Security are being protected.

Representative DORGAN of North Dakota and I have supported legislation to protect the Social Security Trust Fund by immediately blocking the use of trust fund revenues for deficit reduction under Gramm-Rudman. If that plan is adopted, the President and Congress will have to face the real deficit.

If, however, trust fund revenues continue to be used to mask the deficit, hard-earned taxpayer money will be squandered and the Social Security benefits of today's workers cannot be guaranteed. In that case, the only responsible approach will be to reduce the Social Security payroll tax. The legislation I am introducing with Representative DORGAN of North Dakota today would start down that road by rolling back the payroll tax increase for 1990.

It is intended as a signal that it is not good enough to admit the problem but put off the solution. The American people deserve an end to this practice, not in 1997, nor in 1993, but now.

TRIBUTE TO JACKIE SPEIER

HON. TOM LANTOS

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 23, 1990

Mr. LANTOS. Mr. Speaker, California State Assemblywoman Jackie Speier has been selected by the South San Francisco Chamber of Commerce as its "Citizen of the Year." I join my friends at the South San Francisco Chamber in paying tribute to Ms. Speier and invite my colleagues in the Congress to join me in honoring her.

Jackie Speier was elected to the California State Assembly in 1986 representing the 19th Assembly District which includes parts of San Francisco and San Mateo Counties. She has been recognized by her assembly colleagues as a competent and effective legislator, serving as a member of the key ways and means and rules committees and as majority whip.

Prior to her service in the State assembly, Ms. Speier was elected a member of the San Mateo County Board of Supervisors, where she served from 1981 to 1987. As county supervisor she was known for her outstanding work in focusing attention on women's issues. She was instrumental in establishing the San Mateo County Advisory Council on Women, the Household Hazardous Waste Clean-Out Program, Sexual Assault Care Center, and a number of initiatives on child care and parental leave.

Jackie Speier is no stranger to Washington. She was a legislative assistant to our former colleague Leo J. Ryan, who served in Congress until his untimely death in Guyana in 1978.

As a grandfather of 13, I consider one of Ms. Speier's finest accomplishments to be the distinction she achieved as the first member of the California Legislature to have a child while in office. She and her husband, Steve Sierra, are the parents of Jackson Kent Sierra, born July 18, 1988, on the opening day of the last Democratic National Convention.

Mr. Speaker, I invite my colleagues in the Congress to join me in paying well-deserved tribute to my constituent and friend, Jackie Speier, member of the California State Assembly and the South San Francisco Chamber of Commerce "Citizen of the Year."

WILL HILL TANKERSLEY

HON. WILLIAM L. DICKINSON

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 23, 1990

Mr. DICKINSON. Mr. Speaker, effective, October 19, 1985, Secretary of Defense Caspar Weinberger appointed the Honorable Will Hill Tankersley, a native of Montgomery, AL, to a 4-year tour Chairman of the Reserve Forces Policy Board of the Department of Defense. This Board was established in 1952 by Congress as the principal policy advisor to the Secretary of Defense on matters concerning the National Guard and the Reserve of all the armed services.

The Reserve Forces Policy Board, under Chairman Tankersley's direction, has advised the Secretary of Defense on matters that have helped to modernize and integrate the National Guard and Reserve into a genuine and ready total force. The Board was created by Congress as an independent source of advice to the Secretary of Defense and to Congress. Its annual report has become the most comprehensive document available on Guard and Reserve programs and serves as the definitive reference document for reserve component data. Mr. Tankersley's commitment, dedication, and devotion have assured the success of the Board in meeting its congressional mandate.

Will Hill spent 8 years in the regular Army and is a decorated combat infantry veteran of six campaigns of the Korean war, a ranger, and a master parachutist. When he retired from the Army Reserve as a major general, he was awarded the Army's Distinguished Service Medal. He served on all levels from platoon to the Department of Army staff. The Secretary of the Army appointed him to the Army Reserve Forces Policy Committee. His final assignment was commander of the 87th U.S. Army Maneuver Area Command in Birmingham.

From 1969 to 1974 he was civilian aide to the Secretary of the Army for the State of Alabama. President Ford nominated him to be Deputy Assistant Secretary of Defense on September 5, 1974. He was confirmed by the Senate, and sworn in by then Secretary of Defense, James R. Schlesinger. He served in this post until July 1977.

Not only was Will Hill interested in the overall welfare of our defense posture, but he was equally committed to his community. Will Hill is vice chairman of the board of directors of the Montgomery Area Chamber of Commerce. He is a member of the Auburn University Research Advisory Council, he is a past president of the Montgomery Rotary Club, he was director of the Montgomery Area United Way, the Montgomery Academy and the Tukabatchee Area Council of the Boy Scouts of America. And he served as director of the Gover-

nor's Management Improvement Program for State Government. Will Hill is currently the president of Sterne, Agee & Leach, Inc., Alabama's oldest and largest securities firm.

A true southern gentleman, Will Hill Tankersley was a tremendous asset to our Department of Defense, and he remains a devoted champion of Montgomery and the State of Alabama.

COMMEMORATING UKRAINIAN INDEPENDENCE DAY

HON. WM. S. BROOMFIELD

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 23, 1990

Mr. BROOMFIELD. Mr. Speaker, during this past year, we have witnessed momentous changes in Eastern Europe. We have seen an expansion of participatory government and a new commitment to human rights in those countries. There has been important movement toward market-oriented economies that allow individuals greater freedom in determining their economic lives. It has been an exciting and heartwarming experience to see the Berlin Wall come down and to observe the other important events that have characterized these past few months.

To a great degree, President Gorbachev had much to do with allowing these changes to take place without far greater bloodshed and repression. Yet in the Soviet Union itself, the winds of freedom and human rights have yet to blow freely.

The Ukrainian American community has observed January 22 as a day commemorating the time seven decades ago when the Ukraine was an independent, democratic nation, and reaffirmed its support for the dream of self-determination for the people of the Ukraine. At the same time, they reminded all of us that while notable changes have been made in the Soviet Union, we must not ignore the fact that there is much further to go.

After centuries of foreign domination, the Ukrainian National Assembly, meeting in Kiev on January 22, 1918, proclaimed the independence of the Ukraine. This period of independence was short-lived. By the early 1920's, the Soviet Union militarily occupied eastern Ukraine creating the Ukrainian S.S.R.

From the early 1920's to today, harsh and brutal efforts were made to destroy the spirit and the culture of the people of the Ukraine. For the past 4 years, I have served as one of four congressional commissioners to the Commission on the Ukrainian Famine of 1932-33. During those 4 years we took extensive testimony from eyewitnesses to the famine that took millions of Ukrainian lives. We came to the inescapable conclusion that the famine was man-made as a deliberate part of Stalinist policy of genocide to break the back of the Ukraine.

When that failed, the Soviet Government took other harsh steps. From 1934 to 1940, thousands of Ukrainian intellectuals were shot or sent to labor camps, and under the policy of Sovietization, Ukrainian churches were outlawed, Russian was taught in the schools, and expressions of Ukrainian culture were suppressed.

It is time for President Gorbachev to allow perestroika to enter into the political relationship among the various republics of the Soviet Union. Sovietization has failed in the Baltic States and it has failed in the Ukraine. A first step has been taken by allowing the Ukrainian Catholic Church to register as a religion to be observed in the Soviet Union.

However, there is still much further to go. The people should be allowed to freely worship whether they are Ukrainian Catholic, Russian Orthodox, Ukrainian Orthodox, or any other denomination or religion. People must also be allowed to take pride in their full identity. As Americans take pride in their ethnic identity while still being American, the Soviet Government must realize people cannot have an alien identity forced upon them. Finally, a political relationship needs to evolve that recognizes the aspirations of the people of the Ukraine.

Mr. Speaker, during this commemoration of the independence of the Ukraine we must continue to support the aspirations of the people there and encourage President Gorbachev to let necessary changes take place. The Soviet Government must finally accept that the status quo is no longer acceptable and shape its policy toward the Ukraine accordingly.

TRIBUTE TO DARLA RAE PERLOZZI

HON. JAMES A. TRAFICANT, JR.

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 23, 1990

Mr. TRAFICANT. Mr. Speaker, I rise today to pay tribute to Darla Rae Perlozzi who is an aspiring musician from my 17th Congressional District. Darla Rae, who is from Struther, OH, recorded her first single in 1989 which was released in the United States and Europe.

Darla Rae has been playing the drums for more than 15 years and recently released her first single, "Let There Be Drums," which is a rendition of Sandy Nelson's recording from the 1960's. Along with "Let There Be Drums," she recorded "A Brighter Day," which is intended as a song of hope for the less fortunate people of the world. She feels that music is an international language and that it can be used to communicate messages that spoken language cannot.

Ms. Perlozzi graduated from Struthers High School in 1985 and has received a number of musical awards including, six superior ratings in the Ohio Music Education State Competition, Whose Who in Music, the Governor Youth Recognition Award in 1986, and a scholarship from the Music Association of the Music Club. Presently Darla Rae is a member of the musicians' union 86-242 and a member of the band Cloverleaf.

Mr. Speaker, I would like to take this opportunity to congratulate Darla Rae Perlozzi on the release of her first single and commend her on her concern for her fellow man. Darla Rae has a bright future ahead of her and I wish her the best of luck.

TRIBUTE TO DUANE B. BEESON, ESQ.

HON. NANCY PELOSI

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 23, 1990

Ms. PELOSI. Mr. Speaker, I rise today to share with my colleagues the valuable contributions of Duane B. Beeson, Esq., who was honored by All-Charities as a "Great Bay Area Humanitarian" on January 20, 1990. Duane has touched many people in great and small ways over the years.

Duane's stellar legal career began when he graduated from Harvard Law School in 1948, and got off to an auspicious start when he obtained a highly esteemed appointment as a Federal law clerk for the Honorable William E. Orr, judge of the U.S. Court of Appeals, Ninth Circuit. His career with the National Labor Relations Board validated that early promise and many of the cases that Duane shepherded during his tenure at the NLRB remain landmark decisions in labor law.

Duane has not limited his contributions to the practice of labor law alone. In addition, he had served as an instructor at the University of San Francisco Law School, Hastings Law School, George Washington Law School and the University of California Law School. His contributions also extend to constitutional law as Duane's victorious decision in the 1965 case United States versus Seeger before the U.S. Supreme Court on conscientious objections still stands as an important milestone in that area.

Duane joined the firm of Beeson, Tayer, Silbert, Bodine & Livingston in 1961 and has represented many unions, including the Teamsters, California Nurses Association, International Typographical Union, Mailers, and the American Federation of Television and Radio Artists.

Duane B. Beeson has woven a thread of humanitarianism throughout all of his dealings. He has maintained a reputation as a thoughtful, fair, and skillful advocate both in litigations and in negotiations.

A CONGRESSIONAL SALUTE TO BILL TREJO, JR.

HON. GLENN M. ANDERSON

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 23, 1990

Mr. ANDERSON. Mr. Speaker, I rise today to bring to the attention of my colleagues Mr. Bill Trejo, Jr., an individual that has played a major role in the U.S. shipbuilding and repair industry. At a time when this vital domestic industry is experiencing adversity, it is reassuring to know that there are still individuals willing to stand by what they believe in.

Recently the San Pedro News Pilot ran a profile story of Mr. Trejo, and his role in the on-going difficulties faced by Todd Shipyards, San Pedro. For those of you that do not know, this company was forced to close recently leaving 2,000 workers unemployed. It is my

hope that my colleagues will read the following article on Mr. Trejo, both as a tribute to the man, and to demonstrate the need to save our domestic shipbuilding and ship repair industry before it is extinct.

UNIONIST'S LOVE IS LABOR—BILL TREJO, JR., A SELF-TAUGHT NEGOTIATOR AT TODD

(By Bob James)

Bill Trejo Jr. likes to do things the hard way.

Whether negotiating a contract on behalf of his members, earning an education or simply finding time for his family, the executive secretary for Local 9 of the Industrial Union of Marine and Shipbuilding Workers of America rarely takes the easiest route.

"I feel good in doing things the hard way, he said. "I feel good because I have a conscience that tells me I'm doing the right thing."

Raised in East Los Angeles by his mother, Trejo saw gang and prison violence eventually take three family members. But during those years, he also got his first taste of Los Angeles Harbor's salt air when he visited his father, a Todd Shipyards worker, on the weekends.

"I was always awed and amazed by the harbor," he said as he sat in the living room of his San Pedro home. "Being from East L.A., this is another world."

Since then, Trejo has emerged as a major force in the harbor's shipbuilding and repair industry. After beginning his labor career as a shop steward in Todd's dry dock department, trustee and treasurer for the local, he stepped into Local 9's top post almost a year ago—just as the union's main employer, Todd, began its swan song.

The stocky father of two has also earned a reputation as a devoted union man who above all else represents his membership fairly. He often takes a low-key approach to negotiating, but also can be confrontational and hot-tempered.

"His heart is really into it," said Rene Herrera, president of Local 13 of the International Longshoremen's and Warehousemen's Union.

"He really believes in what he's doing," said Herrera, who has known Trejo since their days at Todd in 1978. "All you have to do is stop by and see how hard he works to know that."

"He's good," said Kevin Sullivan, the shipbuilder's union West Coast representative. "He always represented his men well and fairly. "He's had to make some tough decisions and has done well."

In the days when young Billy Trejo attended Todd Christmas parties at the Warner Grand Theater in San Pedro, he never planned to follow in his father's footsteps, but after graduating from high school in 1974, the former athlete found that, thanks to a serious knee injury, he had no way to attend college.

So he picked up odd jobs as a bouncer in a Hollywood nightclub, in a surf shop looking for shoplifters and finally at Todd, where he obtained off-and-on work as a shipfitter's helper.

Working in the same department as his father did for more than 20 years, the younger Trejo learned the craft of piecing together giant sections of sea-going vessels as his father had been taught—from the veterans.

In 1977, when Todd began work on the mammoth 18-ship Navy frigate program, Trejo moved to the dry dock. As the youngest man in the department, he got the dirtiest, hardest jobs and a ton of overtime, he recalled.

In 1978, Trejo married his high school sweetheart Sylvia, in Hawaii. For the next couple years they traveled around the country and to Eastern Europe, returning to the Harbor Area periodically to work again at Todd.

Trejo, 33, returned to Todd full time in 1982, right around the time his first child, Christina, was born. He returned to the dry dock—and the union.

"I wasn't involved in the beginning. I was doing my own thing," Trejo recalls of his relationship with the union.

"But I remember getting disgusted at certain issues, like the distribution of overtime and always hearing that 'personnel said this' and 'personnel said that.' "

"So I started saying, 'Just because personnel said that doesn't make it right. Let's look at where we stand with this contract.' And then I started getting involved in contracts and the next thing you know I'm the shop steward."

Trejo's involvement deepened and he said he "began filing grievances and going into arbitrations" on behalf of his department.

Sullivan said not only was his friend of 10 years a good steward, "he was good at his trade too.

"That's always a good combination because someone who works hard at his trade will usually work hard for the union," Sullivan said, noting that Trejo also earned the respect of management because he was not "over-zealous" in his position.

But the shipbuilder's mettle was put to the test when Todd began installation of the synchro-lift in 1986. The high-tech device essentially replaced the older method of dry-docking vessels by hand by raising and lowering the ship by hydrologic lifts. Trejo said the company also planned to dismantle his department with the old dry-dock.

"A lot of different departments wanted to take it over, but he fought hard to make sure his department got it," Sullivan said. "The winning argument was that he had the expertise in operating dry docks and that this was a similar piece of equipment."

"It was needless. That should have been negotiated square from the beginning," Trejo said of the issue. "But (the negotiators) told me I was secure, but when it came down to it, I wasn't."

The episode marked a change in philosophy for him. From that point on, Trejo said, he wouldn't really trust anyone except himself.

"I've paid a price for it, but I've also paid a price when I did trust people," Trejo said.

From shop steward, Trejo became trustee of the local and then moved on to treasurer and was labeled "The Watchdog" because of his tenacious control over the books. Sullivan said he was one of the most outstanding treasurers the local ever had.

"These guys had their own way of doing things and people let things go as they would," Trejo said, recalling Local 9's fiscal health when he came in.

"But I was doing things, making the company justify what it was doing and so some of that rubbed off with the union hall," Trejo said, admitting his actions cost him some popularity. "But I never challenged anything unless I thought I was right."

Despite his fiscal acuity, Trejo found his real calling in 1986 on the panel negotiating Local 9's new contract with Todd. Even then, company officials said the firm was in trouble and that the union had to take cuts to prevent the yard from closing. Trejo and company stood firm, forcing Todd to issue its "final offer" about 20 times, Trejo said.

Negotiating "is what it's all about. That's where you're able to make a big difference," Trejo said. "That's why the labor movement is there—to make an impact negotiating certain benefits on behalf of the membership."

Having had no formal training in the art of bargaining, Trejo did what he did when the synchro-lift issue arose—hit the books. He read about how to read facial expressions, body language and the art of listening and comprehension. He used tape recorders and takes copious notes and when the issues get really touchy, he said he simply takes a break to mull over in his mind what was said.

"He always conducts himself like a gentleman," said Bill Campbell, vice president of Dockside Marine and Industrial Co. of Wilmington, which was struck by Local 9 for five weeks earlier this year. "I only saw him lose his temper once. He got kind of out of control, but he came back and apologized later."

"Billy does do a good job representing his membership," said John O'Hara, industrial relations manager for Todd. "He mirrors what Local 9 stands for and operates the way they expect him to operate."

When Todd declared bankruptcy in 1987, Local 9 expected even more out of him.

"He spent most of his evenings at the union hall and then when he came home, he had business on his mind," said Mrs. Trejo. "And then people would call all night asking 'How's it going? Is it closing?' It was very stressful."

Mrs. Trejo said there were always rumors the yard was closing, but she didn't believe them.

"(Bill) said there was no way they would close it, that it was just scare tactics. But when they started laying everybody off, it was clear they were closing."

These days, with Todd closed and 2,000 union members out of work, Trejo's responsibility has increased even more. The priority now, he said, is getting a buyer for the yard in there that won't pack up in a couple years. But the road to that goal is filled with obstacles.

"Things are moving so quickly, I try to read a lot now, probably too much because we've stopped communicating," Trejo said, flashing a toothy grin at his wife. "That's how I've educated myself, picking up law books, case histories, books on negotiating tactics, psychology, comprehension, reading facial expressions—anything that would be advantageous for the labor movement.

"One wrong move can cost me and this local our survival," Trejo said.

But dedication has its price. Just as the synchro-lift and treasurer episodes cost him, so has the fight to save Todd. This time, however, his private life paid the bill.

"Since Chapter 11 there hasn't been a whole lot of fun," Trejo said as he opened the door to a garage filled with barbells, scuba diving gear, fishing poles and other toys he hasn't used in a long time.

"You get so deep into a certain issue that sometimes you lose sight of everything else, including your family. That's when you have to take a step back."

While Trejo said his family understands, he admits he felt "a little guilty about not being home for dinner when I should have.

"It took some time for me to learn to say, 'Adios, I'm out of here,' then lock the door of the hall and go home."

Trejo gives his wife a lot of credit for keeping him sane. "She's been great," he said, noting that he is finding more time for his family. Christina, 7, and he are part of the YMCA's Indian Princess program for fathers and daughters and Trejo loves to play with 4-year-old Michael.

"I've been blessed," he said. "I never asked to be in this position and I've felt good when I was able to be successful and felt bad when I lost. But I owe the union for everything that I have."

PAUL CORBIN: THE COMMANDER

HON. BOB CLEMENT

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 23, 1990

Mr. CLEMENT. Mr. Speaker, I want to pay tribute today to a man who was once one of the most colorful political figures of this century, Mr. Paul Corbin.

The Commander, as he described himself, died following a bout with cancer on Tuesday, January 2, 1990, at the age of 75. Today in Nashville a group of Corbin's friends and acquaintances will pay tribute to this man, and I'd like to honor his memory myself as we begin the second session of the 101st Congress. Considering the political legacy Paul Corbin left, I think this is most fitting.

Following his death various political columnists described Paul Corbin as "a national political operative, a most unforgettable character, brash, energetic, controversial, a prankster and a confidante." Paul Corbin was many things, including a very savvy and experienced adviser to some of the leading political figures of the past three decades. Paul Corbin was one of the most respected political minds of our time.

I borrow excerpts from newspaper articles written for the Nashville Banner and Tennessean newspapers in my hometown, Nashville, TN, and from the Janesville, WI, Gazette, to paint a picture of this unique individual.

I would like to submit for the RECORD an article by reporter Jim O'Hara which appeared on Wednesday, January 3, 1990 in the Tennessean.

PAUL CORBIN, POLITICAL FIGURE, DIES

(By Jim O'Hara)

Paul Corbin, confidante of the late Robert F. Kennedy and a national political operative for more than two decades, died yesterday of cancer at his home in Alexandria, Va.

He had both political and business ties to Nashville, dating back to the late 1960s.

Services for Mr. Corbin, 75, will be at 11 a.m. Friday at the De Maine Funeral Home in Alexandria. Burial will be in St. Mary's Cemetery in Alexandria.

Mr. Corbin was born in Winnipeg, Manitoba, in 1914 and moved to Janesville, Wis., in 1935.

He became a U.S. citizen in 1943 and joined the U.S. Marine Corps during World War II. When he was honorably discharged in 1945, Corbin had attained the rank of master sergeant.

Returning to Wisconsin after service in the South Pacific, he became active in the Marine Corps League, eventually becoming the league's national chief of staff. He was also president of the Wisconsin Veterans Council in 1946.

Before and after Corbin's military service, he worked as a labor organizer and that activity eventually resulted in a 1962 appearance before the House Un-American Activities Committee.

He bluntly told the congressmen on the committee that reports of his having ties to the Communist Party were false. Corbin was represented before the committee by Nashville attorney John J. Hooker Jr.

In 1960, Corbin met John F. Kennedy, who was seeking the Democratic presidential nomination, and Corbin worked for him in the Wisconsin and West Virginia primaries.

During the 1960 general election, Corbin worked for John Kennedy in New York state.

From 1961-64, Corbin was a staff member of the Democratic National Committee. He left that position after President Lyndon Johnson pointedly excluded Robert F. Kennedy from consideration as his running mate in 1964

Corbin then worked for Robert Kennedy in his 1964 election to the U.S. Senate from New York. He also worked in the Democrat's 1968 presidential campaign during the California primary.

For Corbin, politics was founded on personal loyalty and friendships.

He was fond of telling friends that while most people lived their lives like funny paper characters in the daily newspapers, he intended to live his like the Sunday comics—in full color.

There was no doubt that Corbin was colorful. He favored long overcoats with fur collars and broad-brimmed black fedoras.

Corbin was also controversial—and sometimes seemed to enjoy that role.

Even Corbin's closest friends were never certain when to separate the fiction from the fact surrounding his activities. Consequently, they were almost never surprised by a Corbin story although they were often left shaking their heads in wonder.

That was the case in 1983 when reports surfaced in the media that Corbin was involved in obtaining briefing papers for a debate from the campaign of President Carter and turning them over to Ronald Reagan's campaign manager, William J. Casey.

And Corbin left it a mystery.

"The Commander." "The Colonel." Those were just two of the sobriquets by which Corbin would conspiratorially identify himself to strangers.

But there was no mistaking the gravelly voice that invited reporters and politicians into Corbin's world where legend and fact were gleefully mixed—and usually to Corbin's advantage.

Corbin's political ties in Tennessee included working for Republican Lamar Alexander in the 1982 governor's race and drumming up support for Democrat Ned McWherter in the 1986 gubernatorial contest.

In May 1989, Corbin was called to testify before a federal grand jury here investigating Sheriff Fate Thomas and was asked by a female reporter to discuss his testimony.

"I don't kiss and tell, do you?" he responded.

That did not stop him from then privately regaling friends with a story of his wanting to smoke while in the grand jury room. When told he couldn't, Corbin said he turned to the grand jury and asked the smokers on the panel if they didn't want to light up.

A recess in the proceedings for the smokers was then called, Corbin said as he proclaimed another personal victory over established authority.

A Corbin story did not have to be believed, only enjoyed.

"The world of politics has lost one of its most colorful characters and I have lost a close, personal friend," said John Seigenthaler, chairman, publisher and chief executive officer of The Tennessean.

Robert and Ethel Kennedy were Corbin's godparents when Corbin and his wife, Gertrude, converted to Catholicism.

After Robert Kennedy's assassination, Corbin moved to Nashville where he was curator of the Country Music Wax Museum.

He then moved to Washington, DC., where he worked as a political consultant.

Corbin was founder of the American Institute for Public Service and served on its board to select recipients of the Jefferson awards. He was also a founder of the Federal City Club in Washington and a member of the Mt. Kenya Safari Club.

Mr. Corbin is survived by his wife, Gertrude; two sisters, Irene Culter of Winnipeg and Freida Shankman of Suissan, Calif.; and a daughter, Darlene Corbin of Marina Del Rey, Calif.

The family asks that donations be made to the Robert F. Kennedy Memorial, 1031 31st Street NW., Washington, DC., 2007.

Following Mr. Corbin's death, the Nashville Banner reported that Mr. Corbin was very proud of the friendships he formed with Kennedy insiders, including John Seigenthaler, now chairman, publisher and chief executive officer of the Tennessean, describing the relationships as "a band of brotherhood that was never broken."

Seigenthaler used to joke that "Corbin is our cross to bear."

Other Kennedy pals claimed that they drew straws after Robert Kennedy's death to see who got Corbin, "and Seigenthaler lost."

Robert Kennedy's biographer, Arthur Schlesinger, described Mr. Corbin as a "natural born con man" who took "cheerful delight in causing trouble and reorganizing the truth."

In 1961, Republican U.S. Representative Melvin Laird accused Mr. Corbin of having Communist ties. John Jay Hooker, who also worked in the Kennedy campaign, served as Mr. Corbin's attorney at hearings before the House Un-American Activities Committee.

The hearings never produced proof that Mr. Corbin had Communist links.

But Mr. Corbin had a lot of laughs in later years recounting how he broke the tension during the hearings by announcing in a very loud voice, "Nothing doing, John Jay. I'm going to tell the truth."

Columnist Mitch Bliss in Corbin's hometown paper, the Janesville Gazette, described Mr. Corbin as "an ex-Marine with a gravelly voice and rapid fire delivery. Corbin was not big physically, but gave you the feeling you would sure want him on your side in a war or any other kind of fight."

Fascinating, engaging, savvy and tough as a bantam rooster, Paul Corbin was the kind of man whose exploits became political legends. Perhaps the highest tribute I can pay Paul Corbin today is to say that I admired and respected him and the advice he gave. When Paul Corbin talked, I wanted to listen.

Like hundreds of his family members and friends, I will miss Paul Corbin. But I also understand that legends grow and live on forever.

BANK ROBBERY ON A GRAND SCALE

HON. FORTNEY PETE STARK

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 23, 1990

Mr. STARK. Mr. Speaker, the Christian Science Monitor contains a recent editorial by Richard Morin and Joseph Ellis, titled "Bank Robbery on a Grand Scale." Morin and Ellis have eloquently described the S&L mess, caused by an era of deregulation coupled by a lack of needed oversight and Federal Government administration. The costs of the resulting waste, fraud, and abuse will be felt by every taxpayer for years to come.

The second session of the 101st Congress will provide an opportunity to resolve potential disasters in the pension guarantee, home mortgage, farm mortgage, and banking industries. I fear, however, that too many special interest groups will bury their heads in the sand and deny that potential problems exist. The time to act is now, and we ought to be willing to make the difficult decisions before the next crisis' financial costs have mushroomed beyond comprehension.

I recommend the following article to my colleagues:

BANK ROBBERY ON A GRAND SCALE

(By Richard Moran and Joseph Ellis)

Until recently, the most memorable comment on bank robbery was made by the legendary stickup man Willy Sutton. When asked why he robbed banks, Sutton explained, "Because that's where the money is." But the recent savings-and-loan scandal has produced a worthy rival in the quotation sweepstakes. Testifying before Congress, the California S&L commissioner observed, "The best way to rob a bank is to own one."

It is time we realized the enormous cost imposed on society by corporate criminals. Until this new breed of bank robbers showed up, there never was a robbery that bankrupted a bank. According to the Justice Department, the average take from a bank job is less than $3,000. Although Willy Sutton, John Dillinger, Bonnie and Clyde, and Jesse James have grabbed all the notoriety, the truth is, they don't amount to a hill of beans when compared to their modern-day counterparts.

Over the next 30 years the cost of bailing out the S&L industry is estimated at between $300 billion and $473 billion. During the next decade, every American taxpayer will be forced to contribute between $2,000 and $3,000 to finance the losses. The savings-and-loan scandal is the most costly crime in recorded history.

The fact is, most of these banks failed not because of deregulation, bad loans, or shifting commercial real estate markets, but because they were either bled dry by a bunch of pin-striped bandits or bankrupted by gamblers who took illegal risks with developers' money.

A recent Government Accounting Office study found that criminal activity played a central role in the 26 most costly thrift failures. Of the 11,319 S & L bankruptcies referred to the Justice Department for possible prosecution, criminal behavior is believed to have played a significant role in 80 percent of them.

The illegal strategies and criminal techniques employed are much too complex to describe in detail here. Essentially they involved siphoning funds, illegal risk taking, and covering up. Siphoning, or bleeding-dry, was the most common and lucrative method employed. Top management paid themselves exorbitant salaries in violation of federal regulations, purchased luxury homes, boats, and cars, and arranged sweetheart deals for friends and relatives. In short, they robbed their own banks.

In defense of federal laws and regulations, saving-and-loan managers made illegal high-risk acquisition, development, and construction loans, often requiring no down payment and relieving the developer of liability if the project went broke. If successful the bank would receive high profits. If unsuccessful, the taxpayers would foot the bill, since all deposits up to $100,000 are insured by the federal government. It's a "heads I win, tails you lose" investment strategy.

And, finally, the executives and managers covered up. They inflated their net worth by financing the purchase of their own stock. They sold land back and forth to each other at inflated prices, thereby creating false increases in total assets. They "cooked" the books, hiding theft, fraud, and insolvency.

If you are having trouble seeing these bank executives as real criminals, consider that the Mafia has been doing the same thing for years. Once gangsters gain a foothold in a legitimate business, they too milk it dry by siphoning off cash, building up large credit lines from suppliers, and then liquidating inventories. When they pull out, all that remains is a shell of a company with creditors holding the bag. They leave behind a snarled network of paper which makes it difficult and costly to prosecute. When the Mafia does this it is called as a "bust-out." When bank managers do it, it is called an insolvency.

While it is true that deregulation of the banking industry created an atmosphere in which corporate crime flourished, this argument serves only to explain how the thievery got so out of hand. It does not excuse the executives' behavior or make it any less criminal. After all, prohibition explains how the mob was able to grow and prosper. And street crime can be traced to the conditions in the ghetto. Drug trafficking, auto theft, prostitution, take your pick, they all can be explained by pointing to the environment in which they are nourished.

Willy Sutton stole from banks the old-fashioned way—he robbed them. The new breed of bank robbers steal sums of money that Sutton never imagined in his most larcenous dreams. Yet very few of them will ever see the inside of a prison, even though they have perpetrated the greatest heist in American history.

FATHER DRINAN ON SOVIET JEWS

HON. BARNEY FRANK

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 23, 1990

Mr. FRANK. Mr. Speaker, my predecessor in the House, Father Robert Drinan, was one of the first Members of Congress to recognize the importance of human rights across the world as an issue which demanded the attention of Americans. Among the areas where he provided moral leadership was that of the question of Jews in the Soviet Union who were facing severe persecution. Although he is no longer in Congress, Father Drinan continues to be an extremely dedicated advocate of human rights and he continues to apply his expertise to these questions. Earlier this month he published an article in the Boston Globe giving an up-to-date review of the situation of Jews in the Soviet Union, and discussing some of the important policy questions that arise out of the changes that have occurred there. Because of his acknowledged status of one of the experts in this area, and because the issues he raises are so timely, I ask that that article be printed here so that our colleagues may get the benefit once again of Father Drinan's analysis.

[From the Boston Globe, Jan. 1, 1990]

TO EMIGRATE—OR STAY?

(By Robert F. Drinan)

For the million Jews in the Soviet Union, it is the best of times and the worst of times.

The numbers able to leave are astonishing. In the first 11 months of 1989, 62,504 Soviet Jews emigrated, easily exceeding the record of 51,333 in all of 1979. In addition, 500,000 Soviet Jews have applied for permission to leave or have documents enabling them to make an application.

The dream of the last exodus is being fulfilled. It was Elie Weisel's 1967 book "The Jews of Silence" which began the worldwide aspiration to liberate the 20 percent of the Jews in the world who, because they lived in the USSR, were denied the right to practice their religion.

The first World Conference on Soviet Jewry, held in Brussels in 1971, began the organized global efforts which have brought about astonishing freedom for Jews in Russia. I participated in the second world conference in 1976 and the third in Jerusalem in 1984. No one at those gatherings could possibly have predicted that up to 70,000 Jews would be able to leave the Soviet Union in 1989.

But amid the rejoicing of Soviet Jews there is widespread anxiety. Should everyone leave—with all of the traumatic experience that entails? Could freedom for Jewish culture become so available in the Soviet Union that it would not be necessary to emigrate? Or, is the ancient memory and tradition of anti-Semitism likely to revive if Jews openly practice their faith and develop their culture?

As angry nationalities come alive in the Soviet Union, grass-roots anti-Semitism and ancient prejudices seem to be growing. The London Economist for Dec. 23, 1989, documents some of the ugly anti-Semitic threats that are emerging in the Soviet Union.

But anti-Semitism is officially banned. The flow of anti-Jewish propaganda copied from Nazi hate books, which the government sponsored for many years, has stopped. There is not yet any legal apparatus to guarantee all Jewish students access to universities, but freedom for Jews has expanded far beyond anything ever dreamed of in the 72 years from 1917 to 1989.

For the first time in 50 years there is a rabbinical school in Moscow. Teaching Yiddish, Hebrew, and Jewish history is no longer forbidden. For the first time since Stalin died in 1953, there is a Jew in the Politburo.

To consolidate these gains, Jewish leaders recently held a congress in Moscow, the first such gathering since the 1917 revolution. Sentiment at that conference was deeply divided. Some urged that most Jews should emigrate lest new waves of anti-Zionist prejudices erupt.

Others felt that the spectacular turn in favor of human rights in the USSR and in Eastern Europe meant that Soviet Jews have many reasons to feel that they will be appreciated in the new country that is emerging.

Anti-Semitism has had a long and dark history in Russia. The poison of that stain is now being revived by a movement called Pamyat. Since its start in the early 1970s, Pamyat has claimed that it is dedicated to the preservation of Russia's cultural history.

But it has revived some of the nation's oldest anti-Semitic prejudices and has added a few more.

Pamyat alleges that Jews are "over-represented" in Soviet public life and consequently urges that Jews should not be admitted to universities and scientific academies. Pamyat has been instrumental in the new wave of anti-Semitism which has led to desecrated Jewish graves, graffiti on synagogue walls, and threatening letters.

The repression that has produced anguish in the Soviet Union for millions since 1917 is hopefully coming to a welcome end. But Jews who remain must daily confront the problem of whether they should prefer certain exodus today or possible extermination tomorrow.

From 1970 to 1989, the US Congress was enormously helpful in making the emigration of 270,000 Soviet Jews possible. The work of the Congress on behalf of all of the Jews in the Soviet Union is entering a new and daunting phase.

NATIONAL EYE DONOR MONTH: MARCH 1990

HON. FRANK J. GUARINI

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 23, 1990

Mr. GUARINI. Mr. Speaker, the efforts of Congress have helped make possible the enormous humanitarian and economic benefits of organ and tissue transplantation: Lives saved, bodies repaired, sight restored, thousands of men, women, and children returned to the workplace, classroom, and community. Our support of eye donation, in particular, has dramatically impacted Americans today.

Thanks to the increased public awareness of the benefits of eye donation, a record number of humanitarian-minded citizens are choosing to pledge their eyes to be used after death for sight restoring surgery and research. Last year alone, more than 80,000 donor eyes were received by eye banks across the United States and Canada. Of this number, the Eye Bank Association of America, [EBAA] reports that more than 36,000 were used for other sight enhancing surgical procedures and in important research projects, to speed the day when thousands of persons with other types of blindness might also have their sight restored.

Since 1961, when the EBAA was founded by the American Academy of Ophthalmology, more than 336,000 corneal transplants have been performed with a 90-percent success rate, making this surgery the most successful and frequent of all transplant procedures. Persons who have received the precious gift of sight through this surgery have come from all walks of life and all parts of the country, including a 9-day-old infant and a 103-year-old great-great-grandfather.

The EBAA coordinates various activities across the United States and Canada through its 96 member eye banks in order to increase eye donations, expedite research and ensure the maintenance of high standards for the screening and distributing of corneas for transplantation. The EBAA is supported by its allied organizations, the Association of Nurses Endorsing Transplantation [ANET] and the National Ambassadors for Corneal Transplant [NACT], whose members are former blind persons whose sight has been restored through corneal transplantation.

Despite this remarkable effort, thousands of blind men, women and children still wait in darkness because of a shortage of eye donations. Eye banking experts are convinced that one of the most effective means for increasing donations is to increase public awareness of the donation process. They indicate that many people do not realize all eyes are acceptable for donation, regardless of the donor's age or quality of vision.

Therefore, it is fitting that we in Congress inform the public of the need for eye donations and encourage more Americans to become organ and tissue donors, as we have done each year since 1983. We do so by designating March 1990 as "National Eye Donor Month" and call on all citizens to support this humanitarian cause.

HER SON'S FLAG

HON. WILLIAM J. HUGHES

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 23, 1990

Mr. HUGHES. Mr. Speaker, I rise today to recognize one of my constituents, Mrs. Dee Scerni of Galloway Township, who has written a beautifully touching poem about our flag. The woman who is the focus of Mrs. Scerni's poem, suffers a tragic loss at the death of her son. Although the woman's loss was great, she took comfort in the courage of her son, symbolized by the American flag. I sincerely believe that Dee Scerni's poem captures the spirit, symbolism, and deep meaning that our flag has engendered for Americans since the founding of the Republic.

Accordingly, it is with great pleasure that I present the full text of Mrs. Scerni's poem which follows:

HER SON'S FLAG

She clutched the folded flag to her breast,
somehow she felt closer to him;
She closed her eyes as tears fell, her memories would not grow dim.
They took her back to a hot Fourth of July,
when he was only three,
As he stood and waved his flag, for everyone to see.
Her arms caressed the folded flag, lovingly,
once more;
The same arms that held this child, that she once bore.
Tears fell upon the folded cloth, she gently wiped them away;
But with it in her arms, she felt closer to him that day.
She remembers when he was twelve, it was a Boy Scout jamboree:
He led the parade carrying our flag, he was as proud as he could be.
She placed the flag upon her lap, the very spot he'd lay his head,
When he was but a child, and she'd carry him to bed.
How proud he was of our country, the freedom that we know;
And when the day came to defend it, off to war he'd go.
She placed the flag near his picture, it was all she had left you see;
But for a heart full of sorrow and a proud memory.
She remembers yet another day, he carried his flag home;
It was draped upon his casket, she stood there all alone.
Through tears she was glad he knew not, of the burnings they want allowed;
Of the flag of his country, while living, he held so proud.

HONORING BEN REIFEL

HON. TIM JOHNSON

OF SOUTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 23, 1990

Mr. JOHNSON of South Dakota. Mr. Speaker, our Nation recently lost one of its leaders, former Congressman Ben Reifel of my State of South Dakota, who served in this body from 1960 to 1970. Ben was an enrolled member of the Rosebud Sioux Tribe, and distinguished himself in the House by being quietly effective. I would like to insert into the RECORD the editorial printed in the January 6, 1990, Sioux Falls Argus-Leader, which eloquently pays tribute to Ben and his career:

STRAIGHT SHOOTER REIFEL'S MARK IN HISTORY WILL GROW

As time goes on, Ben Reifel's stature in South Dakota history likely will grow.

As the first American Indian to serve in the U.S. House of Representatives, he helped bridge cultural gaps, nationally and in South Dakota. He was a believer in education who worked his way to success.

But to thousands of South Dakotans, he was simply a popular congressman who served the state throughout the 1960s.

Reifel, who died Tuesday of cancer, will be remembered for more than his political service to South Dakota. He campaigned as

a straight shooter, and he earned a reputation as one.

He also will be remembered for his concern for agriculture, the arts and Indians. He was known as *Wiyaka Wanjila*, Lone Feather, among his Indian family.

Funeral services for the 83-year-old Lake Poinsett resident will begin at 10 a.m. today in Calvary Episcopal Cathedral in Sioux Falls. Burial will be at 2:30 p.m. in Erwin Cemetery.

Reifel was born in 1906 near Parmalee on the Rosebud Reservation. He was the son of a German rancher and a Sioux mother. He learned to speak both English and Lakota, and hungered for more education.

He earned a bachelor's degree from what is now South Dakota State University and a master's and doctorate from Harvard University.

Before serving in Congress, he taught agriculture at the Pine Ridge Reservation, served in the Army for four years during World War II, was superintendent of the Fort Berthold Reservation in North Dakota and the Pine Ridge Reservation, and was Aberdeen area director for the Bureau of Indian Affairs.

South Dakotans elected him to Congress in 1960, and he was re-elected four times. At the time, the state had two seats in the U.S. House, not just one. Reifel represented the eastern portion of the state.

He often has been credited with helping to bring the Earth Resources Observation System data center to rural Sioux Falls and for helping to keep open Ellsworth Air Force Base near Rapid City.

After retiring from Congress, Reifel served briefly under President Ford as interim commissioner of Indian affairs and on various boards.

He was not loud or flashy, but former colleagues say he was effective. He made few enemies.

Even in the last years of his life, he kept trying to bring Indians and non-Indians closer together.

"We (Indian people) can't relive the past. We find ourselves where we are," he said last year in an interview published in *South Dakota Magazine*. "We have our feet in two worlds. We want to preserve our old values and that is good. But we cannot continue the same value systems as we had with the buffalo economy."

Reifel asked that whites recognize the cultural struggle that American Indians are up against in assimilating into American culture. "Be patient," he said. "Be careful not to stereotype. Be understanding."

That is good advice from a man whose words will deserve more than passing mention in state history.

SAMP LAW OFFICES,
January 8, 1990.

Hon. TIM JOHNSON,
U.S. Representative, Sioux Falls, SD.

DEAR TIM: We are handling the estate and final matters relating to Ben Reifel's estate.

In that regard, I would appreciate your assistance in checking on the following:

1. We need the form to transfer payment on the Congressional retirement benefit from Ben to Mrs. Reifel's guardianship (copy enclosed);

2. We need to know of any other Congressional benefits paid to deceased members. For instance, we believe there is a life insurance or death benefit available, but we do not have any paperwork on the same;

3. Could you check to see whether Mrs. Reifel has the health benefit coverage referred to herein?

We appreciate your assistance on this.

In addition, we will be sending all Honorary Pallbearers and other close associates of Ben a compilation of news articles, editorials, etc. on his passing. If there are any remarks included in the Congressional Record or if you note any stories in the Washington papers, we would certainly like to include them.

Thank you for your help.

Sincerely yours,

ROLLYN H. SAMP.

SALUTING GEORGE KNOX ROTH

HON. NORMAN Y. MINETA

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 23, 1990

Mr. MINETA. Mr. Speaker, this past decade has seen a desire to review and reconsider some momentous events which occurred 48 years ago. Given this Nation's common thirst for the future and disinterest in the past, such a reconsideration is as unique as it is fruitful.

These events of a previous generation were powerful enough to pull the attention of today's historians, lawmakers, civil libertarians, and artists. As a result, we are now taking steps to redress some wrongs committed long ago and thus to reaffirm our great Constitution and the freedoms guaranteed therein.

Our reflections on the past must include acknowledgement of those few who had the vision and strength, when these wrongs were executed, to stand up in protest. George Knox Roth was one of this small group. He, and a few others, spoke out and followed their hearts and their principles, rather than the winds of popularity. They suffered for their stand.

On February 19, 1942, President Roosevelt signed Executive Order 9066, which was to lead to the wholesale abrogation of civil rights of thousands of loyal Americans of Japanese ancestry. These acts and the tragedies which thus resulted were the result of wartime hysteria, racial prejudice, and a failure of political leadership.

At the time of the evacuation and internment of this group of loyal Americans, few voices were raised in protest. Often, those who spoke in favor of the freedom and rights of Americans of Japanese ancestry and of their belief in the loyalty of these hard-working citizens were themselves ostracized as were those of Japanese ancestry. George Knox Roth spoke out, and saw his personal life destroyed.

Such a stigma can cling for years, many years. To this day I receive mail from people who have not yet realized the difference between Americans of Japanese ancestry and a long-gone government of Japan. These letters still attempt to place a stigma on the shoulders of Americans of Japanese ancestry.

The costs of such senseless prejudice are high—to the people ostracized as well as to those others who spoke out for justice. Our Nation, however, pays the highest price of all through the loss of human resources, ideas and contributions. We pay the price in the erosion of progress toward the ideals which we seek and in the undermining of the institutions and principles on which our Nation is built.

Mr. Speaker, we should be especially grateful to those voices who struggled for what was right. We must recognize their cries for justice, cries unclouded by fear, or anger, or ambition.

It has taken many years for this Nation to face up to a shameful wrong. But only by admitting this wrong can we begin to hope that such a tragedy never again occurs.

On March 9, George Knox Roth will be 83 years old. I ask my colleagues to join me in a salute to George and to his leadership. His stand caused him to suffer many sacrifices over the years. We cannot rectify those losses, but we can thank him for his unwavering vision. Without the efforts of men like him, the tragedy of the evacuation and internment would never have been redressed.

Thank you.

NEW YEAR ADDRESS OF CZECHOSLOVAK PRESIDENT VACLAV HAVEL

HON. TOM LANTOS

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 23, 1990

Mr. LANTOS. Mr. Speaker, the highlight of my recent visit to Europe with members of the U.S. congressional delegation to the European Parliament was our meeting with the new President of Czechoslovakia, Vaclav Havel.

As my colleagues know Vaclav Havel has been a beacon for human rights in Czechoslovakia since the Charter 77 human rights organization was first organized in January 1977. This year, Havel was one of the key individuals who led Czechoslovakia from totalitarian dictatorship toward democracy. Thanks to his inspiring leadership of the Civic Forum, Czechoslovakia's "Velvet Revolution" transformed the country.

Mr. Speaker, the people of Czechoslovakia are fortunate indeed to have a man of such stature, integrity, and commitment to democracy and human rights, leading them at this critical time in their history.

As the new year began, just a few days after Vaclav Havel took office, he delivered the traditional new year's address. Mr. Speaker, I ask that President Havel's address be placed in the CONGRESSIONAL RECORD. His realism, commitment to democracy and pluralism, and his dedication to the people of Czechoslovakia is something that all of us should share.

OUR FREEDOM

Dear fellow citizens: For the past 40 years on this day you have heard my predecessors utter different variations on the same theme, about how our country is prospering, how many more billion tons of steel we have produced, how happy we all are, how much we trust our government and what beautiful prospects lie ahead of us. I do not think you put me into this office so that I, of all people, should also lie to you.

Our country is not prospering. The great creative and spiritual potential of our nation is not being used to its full potential. Whole sectors of industry are producing things in which no one is interested, while the things we need are in short supply.

The state, which calls itself a state of the working people, is humiliating and exploiting the workers. Our outdated economy is squandering energy, of which we are in short supply. A country which could once be proud of the standard of education of its people spends so little on education that today it occupies 72nd place in the world. We have laid waste to our soil and the rivers and the forests that our forefathers bequeathed to us, and we have the worst environment in the whole of Euorpe today. Adults in our country die earlier than in most other European countries.

Allow me to tell you about a little personal experience of mine. Flying to Bratislava recently, I found time to look out of the window. What I saw was the Slovnaft [oil refinery] complex and the Petrzalka suburb immediately beyond it. That view was enough for me to understand that our statesmen and politicans had not even looked, or did not even want to look, out of the windows of their planes. None of the statistics available to me would have enabled me to understand more quickly or more easily the situation we have gotten ourselves into.

But not even all of that is the most important thing. The worst thing is that we are living in a decayed moral environment. We have become morally ill, because we have become accustomed to saying one thing and thinking another. We have learned not to believe in anything, not to have consideration for one another and only to look after ourselves. Notions such as love, friendship, compassion, humility and forgiveness have lost their depth and dimension, and for many of us they represent merely some kind of psychological idiosyncrasy, or appear to be some kind of stray relic from times past, something rather comical in the era of computers and space rockets. Few of us managed to cry out that the powerful should not be all-powerful, and that the special farms which produce ecologically sound and high quality foodstuffs for them should send their produce to the schools, children's hotels and hospitals, since our agriculture is not yet able to offer this to everyone.

The previous regime, armed with its arrogant and intolerant ideology, denigrated man into a production force and nature into a production tool. In this way it attacked their very essence and the relationship between them. It made talented people who were capable of managing their own affairs and making an enterprising living in their own country into cogs in some kind of monstrous, ramshackle, smelly machine whose purpose no one can understand. It can do nothing more than slowly but surely wear itself down, along with all the cogs in it.

When I talk about a decayed moral environment, I do not mean merely those gentlemen who eat ecologically pure vegetables and do not look out of their airplane windows. I mean all of us, because all of us have become accustomed to the totalitarian system, accepted it as an inalterable fact and thereby kept it running. In other words, all of us are responsible, each to a different degree, for keeping the totalitarian machine running. None of us is merely a victim of it, because all of us helped to create it together.

Why do I mention this? It would be very unwise to see the sad legacy of the past 40 years as something alien to us, handed down to us by some distant relatives. On the contrary, we must accept this legacy as something which we have brought upon ourselves. If we can accept this, then we will understand that it is up to all of us to do something about it. We cannot lay all the blame on those who ruled us before, not only because this would not be true but also because it could detract from the responsibility each of us now faces—the responsibility to act on our own initiative, freely, sensibly and quickly. . . .

Throughout the world, people are surprised that the acquiescent, humiliated, skeptical Czechoslovak people who apparently no longer believed in anything suddenly managed to find the enormous strength in the space of a few weeks to shake off the totalitarian system in a completely decent and peaceful way. We ourselves are also surprised at this, and we ask where the young people, in particular, who have never known any other system, find the source of their aspirations for truth, freedom of thought, political imagination, civil courage and civic foresight. How is it that their parents, the generation which was considered lost, also joined in with them? How is it even possible that so many people immediately grasped what had to be done, without needing anyone else's advice or instructions?

I think that this hopeful aspect of our situation today has to main reasons. Above all, man is never merely a product of the world around him, he is always capable of striving for something higher, no matter how systematically this ability is ground down by the world around him. Second, the humanistic and democratic traditions—which are often spoken about in such a hollow way—nonetheless lay dormant somewhere in the subconscious of our nations [ethnic groupings] and national minorities, and were passed on quietly from one generation to the next in order for each of us to discover them within us when the time was right, and to put them into practice.

Of course, for our freedom today we also had to pay a price. Many of our people died in prison in the '50s, many were executed, thousands of human lives were destroyed, hundreds of thousands of talented people were driven abroad. Those who defended the honor of our nations in the war were persecuted, as were those who resisted totalitarian government, and those who simply managed to remain true to their own principles and think freely. None of those who paid the price in one way or another for our freedom today should be forgotten. Independent courts should justly assess the appropriate guilt of those responsible, so that the whole truth about our recent past comes out into the open.

Neither should we forget that other nations paid an even higher price for their freedom today, and thus they also paid indirectly for us too. The rivers of blood which flowed in Hungary, Poland, Germany and recently also in such a horrific way in Romania, as well as the sea of blood shed by the nations of the Soviet Union, should not be forgotten primarily because all human suffering affects every human being. But more than that, they must not be forgotten because it was these great sacrifices which weaved the tragic backdrop for today's freedom or gradual liberation of the nations of the Soviet bloc, and the backdrop of our newly charged freedom too.

Without the changes in the Soviet Union, Poland, Hungary and the GDR, the developments in our country could hardly have happened, and if they had happened, they surely would not have had such a wonderful peaceful character. The fact that we had favorable international conditions, of course, does not mean that anyone was helping us directly in these weeks. For centuries, in fact, both our nations have risen up by themselves, without relying on any help from more powerful states or big powers.

This, it seems to me, is the great moral stake of the present moment. It contains the hope that in the future we will no longer have to suffer the complex of those who are permanently indebted to someone else. Now it is up to us alone whether this hope comes to fruition, and whether our civic, national and political self-confidence reawakens in a historically new way.

REGARDING "NATIONAL ARAB-AMERICAN DAY"

HON. JAMES A. TRAFICANT, JR.

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 23, 1990

Mr. TRAFICANT. Mr. Speaker, today, I have reintroduced legislation that would honor Arab-Americans for their contributions to American society by designating October 25, 1990 as "National Arab-American Day." Arab-Americans across the Nation are grateful for the honor we bestowed upon them by granting them a national day last year.

Unfortunately, House Joint Resolution 241, the resolution that became law last year, was not signed by the President until 5 days after the commemoration date. Arab-Americans were unable to partake in any festivities. My hope is that this year the resolution become law prior to October 25, 1990, so that Arab-Americans across the Nation have a chance to celebrate their day of commemoration.

Arab-Americans contribute extensively to the social, cultural, economic, and political make-up of American society. It is estimated that 2.5 million Americans of Arab origin reside in the United States. They deserve a chance to celebrate a national day dedicated exclusively to them. Therefore, I encourage all my colleagues to become cosponsors of this important resolution. Your continued support of this effort to recognize Arab-Americans as an important ethnic group in the United States is much-appreciated by Arab-Americans across the Nation.

BRING PERESTROIKA TO U.S. FARM POLICY

HON. DANA ROHRABACHER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 23, 1990

Mr. ROHRABACHER. Mr. Speaker, my good friend and colleague, DICK ARMEY of Texas, has written an excellent article on the problem of continued subsidization and price control of the farm industry. This is a problem that we need to address and I hope that my colleagues take time to read Congressman ARMEY's article and take his suggestions to heart.

MOSCOW ON THE MISSISSIPPI: AMERICA'S SOVIET-STYLE FARM POLICY

(By Representative Dick Armey)

Even as perestroika comes to the Communist world, our own federal farm programs remain as American monuments to the folly of central planning. Through subsidies, price supports, import barriers, and countless regulations, the Department of Agriculture continues to try to manage half of U.S. farming, with the predicable result of staggering waste and inefficiency of almost Soviet proportions. If we have reached the end of history with the vindication of the free economy, the USDA has not yet heard the word.

Fifty years ago, when the Roosevelt administration announced certain "temporary emergency measures," farm programs were highly controversial. Something about paying farmers not to farm, as many of the programs did, struck the public as ludicrous. Even Henry Wallace, the Agriculture Secretary who conceived the idea remarked, "I hope we shall never have to resort to it again. To destroy a standing crop goes against the soundest instincts of human nature." The USDA has been resorting to it ever since.

Under the current farm law, passed in 1985, the Department of Agriculture has paid dairy farmers to kill 1.6 million cows and take five-year vacations from farming. It has enforced regulations that have led to the squandering of 3 billion oranges, 2 billion lemons, and hundreds of millions of pounds of nuts and raisins. It has rewarded crop farmers for leaving idle 61 million acres of farmland—an area equal to all the territory of Ohio and Indiana, and half of Illinois. For these dubious contributions to American competitiveness, the USDA has charged the taxpayers about $20 billion a year and forced consumers to pay $10 billion a year in higher food costs.

As James Bovard has recently written in The Farm Fiasco:

"Farm subsidies are the equivalent of giving every full-time subsidized farmer two new Mercedes Benz automobiles each year. Annual subsidies for each dairy cow in the United States exceed the per capital income for half the population of the world. With the $260 billion that the government and consumers have spent on farm subsidies since 1980, Uncle Sam could have bought every farm, barn, and tractor in 33 states. The average American head of household worked almost one week a year in 1986 and 1987 simply to pay for welfare for fewer than a million farmers."

Farm programs are unrivaled for their sheer economic absurdity, and they are fertile ground for serious spending reductions. Sadly, however, they are being neglected by key policymakers—even as the new farm bill comes under consideration on Capitol Hill.

FIVE-YEAR PLANS

Our farm economy is governed by a series of five-year plans. (Surely Stalin would appreciate the irony.) The last five-year farm bill, which has cost over $100 billion to date, was signed by President Reagan in 1985. The next, which will guide farm spending through 1995, is now being considered by Congress.

Although the Reagan administration failed to terminate or privatize many deserving government programs, it at least restructured the major entitlements, saving billions of dollars in the long run. Cost controls were imposed on Medicare, the huge military and civil service pension programs were completely reorganized, and even Social Security benefits were trimmed in the reform of 1983. Virtually the only major program to escape is agriculture, which remains a stubborn pocket of resistance to the Reagan Revolution.

In fact, the cost of farm programs has exploded under the Republicans. As recently as 1980, farm price supports cost the taxpayers only about $3 billion. By 1986, they had skyrocketed to an unprecedented $26 billion, making farm programs the fastest growing part of the federal budget during the Reagan years, dwarfing the percentage increases of defense and health care. The farm sector was practically a free market economy when Jimmy Carter was president.

Today, farm programs are so generous and distort markets so severely that even the most self-reliant farmer has little choice but to sign up. In 1982, when farm programs were mushrooming, only one in five Indiana corn farmers signed up for federal benefits. David Rapp of Congressional Quarterly explains, "In Indiana, taking money from the federal government was a sign of poor farm management or, worse, socialistic political tendencies." By 1987, however, half the corn farmers in the state had joined the programs. Nationally, the amount of corn-growing land covered by federal programs jumped from 30 to 90 percent between 1982 and 1987. "It's almost to a point where it's mandatory for a farmer to be in the program," an Indiana banker says.

The Reagan administration's repeated unwillingness to make even minor agriculture reforms were to David Stockman "the smoking gun which proved that the White House couldn't tackle the fabulous excesses of the farm pork barrel, and that was the very bottom of the whole spending barrel."

PENNIES FROM WILLIE NELSON

Unfortunately, the Bush administration may be preparing to surrender the field as well. The administration has apparently only begun to think about its farm policy. The opportunity to propose and achieve major farm reform is rapidly slipping away. In fact, despite the billions of dollars at stake, this year's farm debate may be the quietest in a decade. In 1985, farm programs had become a "cause" on a level with the Nuclear Freeze. Cissy Spacek and Jessica Lange testified before Congress to share the insight on agricultural policy they had gained while starring in Hollywood movies about farming. Country singer Willie Nelson held a Farm Aid concert, which collected a few million dollars for farmers above the $26 billion that Congress would soon be sending them. In the general hysteria of a "crisis on the farm," conservatives and liberals alike scruntinized the farm bill. But, as of this writing, the media has not yet discovered a new farm crisis to draw attention to the coming debate this year.

More important, the farm lobby is now using, with some effect, the breathtaking argument that farm programs are actually contributing to deficit reduction. They point out that this year's price support spending of $12 billion represents a decline from the $26 billion we spent in the record-shattering year of 1986 (which, of course, says more about spending in 1986 than it does about spending today).

When the 1981 farm bill came before Congress, the USDA said it would cost $12 billion over four years. It actually cost $60 billion. When the 1985 farm bill came to the floor, the USDA said it would cost $52 billion over five years. It has already cost more than $100 billion. Any recent reduction in farm spending is thus only a partial reduction of a spectacular cost overrun—a cost overrun larger than the gross national product of several countries. To fail to reform the USDA after such monumental prodigality would be comparable to making Deborah Gore Dean the new Secretary of HUD.

HOMEGROWN INDUSTRIAL POLICY

The farm lobby's most important advantage is that few people understand its programs. As one farmer told Insight magazine, "Sitting here on the farm and knowing the money being spent on farm programs, I think if people understood it more and knew they were paying that kind of price, there'd be an uprising." Even the eyes of otherwise well-informed policymakers glaze over at terms like "nonrecourse loans," base acreage," and "deficiency payments." They tend to leave farm policy to the farm lobby and legislators from farm states. While the Armed Services Committee has its Pat Schroeder and Ron Dellums, there are no fundamental critics of farm subsidies on the Agricultural Committees.

This is unfortunate. For all their apparent complexity, the general idea behind the biggest of the farm programs is simple. Basically, they work like this:

First, the government spends hundreds of millions of dollars to raise farm incomes by raising the prices of certain farm commodities. This has the effect of encouraging farmers to produce those commodities in large amounts, while encouraging customers (like those in our overseas export markets) to buy them in small amounts. Soon a massive surplus occurs. Then the government spends hundreds of millions of dollars to encourage farmers to stop producing them.

By analogy, suppose Congress decided that American cars should be sold for at least $15,000 apiece. Even though a Ford Escort might sell for half that on the open market, Congress might argue that making cars is expensive and the Great American Autoworker deserves to be adequately rewarded for his labors. So it passes a bill, and the government announces that, henceforth, no car will sell for a nickel less than that target price—even if the government has to buy them itself.

There is gaiety in Detroit. Suddenly, everyone wants to be in the car business. New factories open, old ones are expanded, some that were going to produce other things continue producing autos instead. Cars begin rolling off the assembly line by the thousands, then the tens of thousands.

But then something completely unexpected happens. A huge surplus of American cars mysteriously appears. Foreign sales vanish, domestic sales drop. There aren't enough people willing to pay $15,000 for Ford Escorts. Baffled, government bureaucrats find themselves having to buy more and more. Soon government parking garages are overflowing. For a time, the crisis is eased when the government gives some of the extra cars to Zimbabwe under the "Drive for Peace" program. Others are given to poor people and students through the welfare system. But these measures are inadequate.

Eventually, the government hits upon a solution. Stop guaranteeing a $15,000 sticker price for cars? Not at all. Instead, the government decides to pay Detroit to shut down its factories (at which point there is gaiety in Tokyo).

THE OPEC SCHOOL OF FARMING

The largest farm programs apply to wheat, corn, rice, cotton, and a few other

crops. The prices on these commodities are artificially supported by various government policies. For example, the government may make a loan to farmers, based on a loan rate set by Congress. If the farmer can sell his crop for more than the loan amount, he does so, and returns the government's money. But if he cannot, he can keep the loan money and give the government his crop instead. In effect, the farmer is guaranteed that he can sell his crop at the government's price. The problem is that Congress sets that price above market level.

This leads to massive surpluses. At that point, the government buys the surplus and tries to distribute it through the welfare system, foreign aid, or other programs, and begins paying farmers not to farm in a frantic effort to reduce production. The government manages farms like a man trying to drive a car by putting his feet on the accelerator and the brake at the same time.

Other farm programs hike prices and cut production in other ways. Under the dairy program, local dairy cooperatives are allowed to form government-protected monopolies. Because there is no competition, people have no choice but to buy milk at high prices—which is a good arrangement for the big cooperatives, but a bad arrangement for parents who buy milk for their children. The resulting dairy surpluses have been reduced by the government's paying dairy farmers to slaughter or export their cows and leave dairy farming for five years. (Can anyone imagine the government paying automakers to destroy or export their machines? And then not to work for five years?)

Similar rules, called marketing orders, allow a few large California orange growers to decide how many California oranges may be released to the market. By forcing all the state's orange growers to withhold as much as two-thirds of their crops (and watch them rot), the large producers can set the price for the rest of their fruits at a high level. If a small producer defies the large growers and tries to sell his oranges at a lower price, he is prosecuted by the federal government. This is great for Sunkist, bad for everyone else. One grower merely tried to give away his oranges to a church helping the needy, and the USDA threatened to sue him for it. In effect, the government is the enforcer of a cartel—a miniature OPEC for oranges.

DEPORTING OUR FARMLAND

"Supply control" policies—paying farmers not to farm—epitomize the attitude, prevalent throughout the USDA and the Agriculture Committees in Congress, that farm productivity is a problem rather than a national asset. In the 1985 Farm Bill and in other legislation, Congress has given the USDA a number of weapons to use against farmers who are too productive. The Acreage Reduction Program is typical. A farmer is told that if he wants to receive federal farm benefits, he must first agree to take a percentage of his land out of production. It is not uncommon for a wheat farmer, for instance, to be told to leave a quarter of his land idle.

There is also a "paid land diversion" program, in which a farmer simply receives a check from the government of idling acres; a conservation program, in which he is paid to take erosion-prone land out of production (as if he cannot himself see the wisdom in preserving his land); and a new "0/92" program in which he can get up to 92 percent of his federal benefits if he agrees not to plant anything at all.

Like any central plannning effort, whether in the Soviet Union or the American Corn Belt, all supply-control policies are riddled with irrationalities and unintended consequences. Even though the USDA has one bureaucrat for every six full-time farmers, fine-tuning the farm economy is a difficult task.

While the set-asides are supposed to be good for farmers, they inadvertently devastate the rural businesses that depend on farming, and end up hurting almost as many people as they are intended to help. Just as a government policy that would pay automakers not to make cars would hurt the glass, steel, and rubber industries, paying farmers not to farm hurts everyone from the fertilizer companies to the tractor dealers. According to the USDA's own figures, payments to farmers to idle acreage cost the economy 300,000 potential jobs and $4 billion in lost sales for the "farm input" industry in 1987.

Then there is unfair competition. Under the Dairy Termination Program, the government's final solution to the "problem" of milk productivity, dairy farmers were paid to slaughter their cows and take five-year vacations. It apparently never occurred to the USDA or Congress that this might have an effect on the ranchers who raise beef cattle. It did. When the government announced that it was going to have a million dairy cows killed, everyone realized that the market would soon be inundated with tons of additional meat. The market instantly collapsed, and cattlemen lost $25 million in the first week alone.

The government typically behaves as if its many different policies were conceived by different groups of people who never talk to each other. At the same time one part of the government is spending billions of dollars to encourage farmers to take their land out of production, another is spending billions more (and wasting precious water resources) to irrigate new farmland in the Southwest. While the government is paying some dairy farmers to take a vacation from farming for five years, it is giving cheap loans to other farmers to expand their operations. Our farm programs are at war with themselves.

For all their contradictions and unintended consequences, however, supply controls ultimately represent a calculated government effort to lower the productivity of one of our largest industries. Telling farmers to idle their land is like telling factory managers to operate their plants far below full capacity. It is tremendously inefficient, and the consequences are predictable. While U.S. farmers are being directed by the government to take their land out of production, farmers in Canada, Australia, Argentina, and Europe have been eagerly planting. As the USDA has paid U.S. farmers to idle 61 million acres, foreigners have planted 70 million new acres since 1980. In effect, the USDA deported our farmland.

The problem at the root of farm programs is this: While a sound economy should produce an abundance of goods that can then be sold at a low price, our farm programs are designed to create a scarcity of goods that can then be sold at a high price. Having a "surplus" of corn does not mean that farmers produce too much corn, only that they produce more corn than can be sold at the government-inflated price. Farm productivity is good, so long as the market is permitted to function. If the government did not artificially inflate the price of corn and wheat, efficient U.S. farmers could plant fencerow to fencerow and dominate global markets. If high production then forced the price of corn and wheat very low—which wouldn't be the worst thing that could happen in a hungry world—then some farmers would switch to growing crops that people need more. And some farmers might even leave farming.

LATTER-DAY LUDDITES

This last possibility—that even a single farmer might quit farming—haunts some farm legislators. The guiding spirit of much of our farm policy seems to be a desire to freeze the farm economy in time—to stop all change, prevent all innovations, scorn all efficiencies—out of a fear that somebody in the farming business might have to switch jobs. In 1985, the House Agriculture Committee even voted to outlaw an automatic egg-breaking machine, "The Egg King," because it would hurt egg producers who package powdered eggs for the armed services and cafeterias. More recently, a milk producers' lobby opposed the use of a hormone that would vastly increase the production of milk. As we move into the competitive 1990s, one of America's largest industries is being run by latter-day Luddites.

Many believe that farming is a uniquely uncertain business because of the weather. Without some government cushions in the form of price supports and other programs, no farmer according to this argument could survive the vagaries of the farm marketplace.

But how would the farmer fare without farm programs? Contrary to popular misconception, almost half of U.S. farmers grow crops that receive no federal price supports. Anything from meat to vegetables to specialty crops are produced by farmers operating in a free or nearly free economy. The bankruptcy rate of those farmers has actually been lower than the bankruptcy rate of farmers "benefiting" from federal programs. If potatoes can be grown without federal help, corn can as well.

The fluctuations in the market caused by the USDA's inept attempts at central planning have caused the modern farmer more grief than Mother Nature ever has. Any cattleman who was nearly bankrupted when the USDA and Congress had a whim to pay for the slaughter of a million cows can tell us much about the vagaries of the marketplace.

In a number of ways, federal programs hurt the farmers they are intended to benefit. For example, federal crop subsidies raise the value of farmland, which is good for the landowners, but almost half of American farmers rent their land. When the government raises the value of the land, their rents rise.

The Farm Credit System provides cheap, subsidized loans to farmers who are uncreditworthy and cannot receive loans elsewhere. This means that farmers who saved their money and managed their farms wisely have to compete against those who have been bailed out by the government. It also means that inept farmers are encouraged by the government to stay in farming longer than many of them should. Rather than move to town after a few bad years, the cheap federal money encourages them to stay on the farm until they have lost everything. Then the government forecloses on them.

The family farm might flourish in the absence of farm programs. The current subsidy system compels farmers to concentrate on maximizing their yields rather than on

minimizing their costs. This gives an advantage to large, heavily mechanized farms over smaller, family operations. Wealthy farmers can afford the huge combines that allow them to outproduce small farmers and even buy them out. Without price supports, however, the advantage would shift to small operations with low production costs and free labor—the family farm. As Dennis Avery, an analyst with the Hudson Institute, has written: "Federal farm programs have led to an overcapitalization of agriculture with less actual employment than what it would otherwise have." Contrary to the fears of the Agriculture Committees, without farm programs, we might have more farmers than we do today.

WORLD CHAMPION LOG ROLLERS

The farm lobby cannot prevail through its numbers alone. According to Bernal Green and Thomas Carlin, two economists with the USDA, while no one expects farming to be a dominant industry in large metropolitan areas, "it's surprising to find that farming isn't all that important to most of the nation's rural counties either." They estimate that only 46 of the 435 congressional districts are farm oriented.

Like the labor unions, however, farm groups have used political organizing skill to amplify their power far beyond their numbers. First, differences between the various groups are minimized. Although the dairy farmers have different interests than do the sugar producers, for example, they tend to support each other's claims before Congress. They are champion logrollers. David Nagle, a Democrat from Iowa, took the floor last fall and referred quite explicitly to a deal farm state legislators had cut with the maritime unions. In return for congressmen from farm states supporting "cargo preference requirements" (sort of a "ship-American" rule), the maritime interests agreed to support the farm programs. As Magle explained it:

Had we been forced to rely on our own farm state votes, none of those [agriculture] programs would have been enacted. Our numbers are small and getting smaller. So—back in 1985—we farm state members sat down with other groups facing the same problem and reached an agreement on the proper scope of the cargo preference requirements.

Nevertheless, the strength of the farm bloc may be overrated. As recently as 1980 the farm economy was relatively free of instrusive farm programs. The dairy program could have been terminated in 1985 had it not been for the general "farm crisis" hysteria that year. The House voted to abolish both the sugar and honey programs in 1981 (although they still survived).

AN AGENDA FOR PERESTROIKA

As we continue the farm debate this spring, there are several initiatives that should be considered in Congress. While major reforms are unlikely without the active involvement of the administration, public discussion of many points could cause the farm lobby some healthy discomfiture and cast farm programs in their proper light. The policies we consider should:

Shift from price supports to welfare for farmers. If the goal of our farm programs is to help needy farmers, we should do so directly with welfare payments rather than with the complex and costly system of price supports. Agricultural economist Clifton B. Luttrell estimates that such a welfare policy would cost $4 billion a year at most, far less than the $12 billion the USDA is now spending.

Repeal all marketing orders. The semi-feudal regulations that prohibit free Americans from selling oranges in California without the approval of Sunkist are perhaps the most offensive element of our farm programs in principle. Current law prohibits the Office of Management and Budget from even studying them. Marketing orders should be repealed.

Terminate the dairy program. This is the program in which farmers were paid to kill their cows and take five-year vacations from farming so that parents can pay higher prices for milk at the grocery store. It should not exist.

Stop paying farmers not to farm. The average man on the street does not want the USDA to pay farmers not to farm. It is an affront to common sense, an insult to farmers, and an attack on American competitiveness. An amendment should be attached to this year's farm bill repealing the USDA's authority to reward farmers for idling their land.

When I was an economics professor, I like to tell my students about Armey's Axiom No. 1: "The market is rational; the government is dumb." Farm programs are replete with examples that validate that principle. In the stench of billions of rotting oranges, the spectacle of a million slaughtered cows, and the stillness of 61 million acres of idled farmland, one can discern the fundamental truth: The free market works and central planning does not.

LANE KIRKLAND: AN AUTHENTIC HERO

HON. JOHN J. LaFALCE

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 23, 1990

Mr. LAFALCE. Mr. Speaker, I would like today to pay tribute to an unsung hero who helped advance the cause of democracy and freedom in Eastern Europe. He is, however, not an Eastern European. He is very much American. And his name is Lane Kirkland.

Today, in the wake of democracy's emerging triumphant in Eastern Europe, it is all too easy to forget the long struggle which preceded it. We should recall that the change which is now sweeping Eastern Europe first got its start in Poland. For it was there that Lech Walesa and the Solidarity movement, after a near decade of struggle, succeeded in forming the first non-Communist government in Eastern Europe.

During that near-decade of struggle, Lane Kirkland, as the president of the AFL-CIO, played a crucial role in sustaining Poland's Solidarity movement. When the prospects for Solidarity's survival seemed much in doubt, the AFL-CIO, under Kirkland's leadership, came through with sorely needed money and equipment. And by its advocacy, the AFL-CIO also focused much needed international attention on the struggles of the Polish labor movement. In a very real way, Lane Kirkland and the AFL-CIO helped to change the course of history.

M.S. Forbes, Jr., the deputy editor-in-chief of Forbes magazine, recently wrote a salute to Kirkland, calling him "an authentic hero" for his role in sustaining Solidarity. At this time, I would like to share that salute with my colleagues.

AN AUTHENTIC HERO

One man who deserves special recognition for the extraordinary wave of freedom sweeping through Eastern Europe is AFL-CIO President Lane Kirkland.

In the dark days of the early 1980s, when Solidarity was being actively persecuted by Poland's martial-law government, Kirkland and his American labor colleagues provided the sustenance that helped keep Walesa's organization alive. The AFL-CIO poured in badly needed money and provided the Polish underground with smuggled printing presses and electronic equipment. It made sure the beleaguered movement received valuable worldwide publicity when observers thought Solidarity was on the ropes.

The movement thus stayed alive and gradually gained the strength to topple Warsaw's communist government. It did so, of course, not through an armed uprising, but through depriving the Red regime of its last vestiges of authority and legitimacy. With Poland's economy collapsing, with its population sullen and uncooperative, the Kremlin decided this summer not to use force to keep out a non-communist-dominated cabinet. Solidarity's assumption of power started the landslide that is sweeping away Europe's repressive Red governments.

This writer came to know Lane Kirkland through our membership on the Board of International Broadcasting, which oversees Radio Free Europe and Radio Liberty, two of the most powerful, underappreciated (in the West) incubators of democracy in the former Eastern bloc. While engaging and witty, Kirkland is an unswerving champion of democracy and human rights. Unlike other Western labor organizations, the AFL-CIO never dealt with unions associated with communist regimes.

By acting upon their principles, Kirkland and American labor played a vital part in the most dramatic expansion of human freedom this century has seen.

MINERAL EXPLORATION AND DEVELOPMENT ACT OF 1990

HON. NICK JOE RAHALL II

OF WEST VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 23, 1990

Mr. RAHALL. Mr. Speaker, today I am introducing legislation to revise the Mining Law of 1872. This bill is aimed at providing a focal point for debate in the House of Representatives, after a hiatus spanning more than a decade, on some very pressing issues facing the future of mineral exploration and development on public domain lands in this country.

Joining me in introducing this bill is my colleague on the Committee on Interior and Insular Affairs, BRUCE VENTO, the chairman of the Subcommittee on National Parks and Public Lands.

In fashioning this legislation, I have been extremely mindful of the divergent views held by those with an interest in this matter. I anticipate that the mere introduction of legislation to reform the Mining Law of 1872, regardless of the contents of the bill, will be roundly criticized by certain parties. I also realize that there will be those who will say this bill does

not go far enough, or goes too far, in its proposals to revise the mining law regime.

This is, of course, something to be expected when dealing with a law that has accumulated so much history, and which has generated so much controversy since its inception. Signed into law by President Ulysses S. Grant on May 10, 1872, serious efforts to revise the mining law commenced within a decade thereafter. However, over the years the Mining Law of 1872 has remained relatively intact and survives as the last vestige of such 19th century western settlement measures as the Homestead Act. Today, this law continues to govern the disposition of minerals from western public domain lands in much the same manner as it did when it was enacted, with the major exceptions of the energy and fertilizer minerals, placed under a leasing system in 1920, and common varieties of mineral materials such as sand, stone, gravel, and clay which were made subject to sale in 1947.

Under the Mining Law of 1872, mining claims are located on public domain lands for minerals such as gold, silver, lead, copper, and zinc. No payments of any kind for the use of Federal lands are required and a claimholder need spend only $100 per year in order to maintain a claim. If valuable minerals are found, the claimholder can purchase the land for $2.50 an acre.

Nonetheless, much has changed in the area of public land policy and mineral exploration and development techniques since 1872. While the mining law remained static, the world around it has evolved. Despite administrative and judicial attempts to twist and mold the Mining Law of 1872 into some semblance of compatibility with the mineral requirements, modern business practices, and public land use philosophies of today's America, some of the more archaic provisions of the law that thwart efficient mineral exploration and development remain. Nothing short of legislation can fix this situation.

I do think that if the father of the Mining Law of 1872, Senator William Stewart of Nevada, were to sit down today and draft mining law legislation, he would do it differently. Would even an unabashed mining industry attorney like Senator Stewart in this day and age devise a system which allows public lands to be disposed of for $2.50 an acre? Would he stipulate that the diligent development of a claim only required the expenditure of $100 per year? In light of the type of mineralization of interest today would he stipulate that there must be a discovery of a valuable mineral in order to locate and hold a mining claim? For my part, I cannot conceive of any of this being the case.

In effect, while the mining law of 1872 over the years has done great service to the development of this Nation, I believe that we have already passed the point in time when this 19th century law can be depended upon to serve the country's 21st century mineral needs.

Entitled the "Mineral Exploration and Development Act of 1990," this legislation revises the mining law to eliminate some of its 118-year-old abuses and deficiencies. At the same time, it will ensure the availability of a continued supply of minerals so desperately needed for the health of our economy and the maintenance of our very standard of living.

This is a mining claim bill, based on the principles of access to public domain lands and the right of self-initiation. One of the major thrusts of this legislation is to provide locators of mining claims with the type of security of tenure they currently do not have.

The mining law of 1872 provides that claims cannot be located until there is a discovery of a valuable mineral. At some point in the past, while the mining law dictum of discovery and the judicially promulgated concept of pedis possessio may have made sense, they simply do not comport well with today's modern mineral exploration techniques, or for that matter, the types of mineralization involved. Making a discovery of a valuable mineral was a lot easier to do during the 19th century when there could still be found surface manifestations of minerals. Today, for the most part, in this age of mining "no see-um" gold this simply is not the case.

In my view, discovery is an illusory concept that is grounded in a quagmire of judicial and administrative pitfalls and fraught with time consuming and expensive legal proceedings. I do not deny that the most fervent proponents of discovery are lawyers. Perhaps the least support for the discovery concept comes from the folks who do not sit around in office buildings all day but who are actually out on the ground exploring for minerals.

This legislation says, quite simply, that once you locate and record a mining claim, your possessory rights are protected against any other party so long as there is compliance with the rental, diligent development, and filing requirements of the bill. The proposed rental rate is not set so as to burden small prospectors, yet at the same time, it would provide some return to the public for the use of their lands.

In the same sense, the proposed diligent development requirements of the legislation are set low enough during the first few years after the location and recordation of a mining claim so as to facilitate, and not hinder, mineral prospecting and exploration activities.

I believe the national interest is best served if mining claimants spend their money toward the development of minerals. As such, this bill is not aimed at extracting revenue from holders of mining claims. This should not be the purpose of mining legislation. While I have incorporated a rental, which shows good faith among those who lay claim to public domain lands, I am not proposing that a production royalty be imposed on minerals produced from mining claims.

Over the years I have had a great deal of experience with our Federal onshore oil, gas, geothermal, and coal royalty system. While royalty payments are appropriate for these minerals, I believe that the Federal Government would spend more money that it would net in attempting to devise valuation guidelines, collect and audit royalty payments from the almost countless types of minerals, from the widespread to the extremely rare, subject to the mining law of 1872.

To wit, even with the royalties the Government collects from Federal onshore energy minerals it nets less than 10 cents on the dollar after disbursing 50 percent of collections to the States, 40 percent to the reclamation fund, and deducting all administrative costs for royalty collections from the remaining 10 percent. Further, as a witness to the years-old struggle to devise Federal valuation standards for royalty purposes for that would appear to be a relatively simple commodity such as coal, I tremble to think of the dilemma in which Interior Department bureaucrats would find themselves in attempting to set forth valuation regulations, audit, and collect royalties for minerals such as yttrium, let alone tungsten or zinc.

Unless something drastically changes to improve the Federal Government's royalty management capabilities, I cannot in good conscience support the imposition of royalties on hardrock mineral production.

By eliminating the concept of discovery and a number of other arcane aspects of the mining law of 1872, such as the distinction between lode and placer claims, and causing claims to be held on the basis of sound market-based business decisions I believe this legislation offers the mining industry a much more superior legislative framework under which to operate.

At the same time, this legislation does recognize some other basic values held by our society. It requires that mineral development be subjected to surface management regulations and the land-use planning process. It also dispenses with the mining law's authority to dispose of public domain lands. Finally, it seeks to provide for better administrative efficiencies by vesting jurisdiction over mining law activities with the surface management agency involved.

This legislation has been a year in the making, and we have taken great pains to solicit input from anyone who cared to work with us. However, I do not purport to have devised a perfect piece of legislation. Be that as it may, this proposal is representative of some very basic tenets that I believe should be discussed as part of any consideration of legislation in this area.

I would also note that in 1987 I challenged industry and environmentalists to drop their long-standing mistrust of each other on mining law issues and work together toward a mutually acceptable legislative package. As a result, a dialog group was formed and continues to meet on a sporadic basis. This is the sort of forum that I hope to look toward for consensus recommendations on some of the issues raised by this legislation, especially in the areas of surface management and land use planning.

Mr. Speaker, as I stated earlier, the purpose of this legislation is to begin once again consideration of the need to improve upon the type of regime set forth by the mining law of 1972. I am extremely open to comments from all interested parties and look foward to our future deliberations.

THE UNDERGROUND RAILROAD HISTORIC TRAIL

HON. PETER H. KOSTMAYER

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 23, 1990

Mr. KOSTMAYER. Mr. Speaker, today I am introducing legislation to establish the Underground Railroad Historic Trail. The Underground Railroad was a secret avenue from slavery to freedom in the Northern States and Canada for somewhere between 30,000 and 100,000 slaves from approximately 1815 through the 1860's. Slaves were hidden in stables, attics, and secret passages in homes across the country. Many of these sites are still standing today. This legislation would help preserve these way stations for our descendants. Preceding the establishment of the trail would be a study and evaluation of the locations, their historic significance, architectural integrity, and physical condition.

I would also like to take the opportunity to insert portions of an article by Lacy McCrary entitled "Liberty Train, Lingering Tracks" that appeared in the Philadelphia Inquirer on January 16.

LIBERTY TRAIN, LINGERING TRACKS

The underground Railroad [was] a train that had no tracks, no stations, no timetables. Instead, it was a network of paths through the woods and fields, river crossings, boats and ships and wagons. Its stations were churches, homes, farmhouses, barns and cellars of white and black people who opposed slavery and risked their lives in many cases to help the slaves escape their Southern masters . . . .

U.S. Rep. Peter H. Kostmayer (D., Pa.) wants the federal government to formally identify those perilous paths to freedom. Kostmayer says he will introduce a bill to established the "Underground Railroad Historic Trail as a fitting and appropriate national commemoration to those who fled to freedom on the railroad and to those who aided slaves seeking their freedom.

"It is a part of our history which reflects well on the country, but which has an unhappier side," Kostmayer said in a recent interview. "We need to remember we were a country in which slavery existed. And at the same time remember there were people who thought it was wrong and were willing to risk their lives to change it," Kostmayer said.

He said some of the stations had been individually designated, "but I don't think any comprehensive effort has been made to recognize as many stations as possible."

Kostmayer's bill would direct the Secretary of the Interior to designate a route as the Underground Railroad Historic Trail, install suitable signs and markers and provide maps, brochures and other informational devices to assist the public.

Mount Gilead A.M.E. Church, a neat, two-story fieldstone building, stands in a grove of trees atop Buckingham Mountain in Buckingham Township, Bucks County. The church, originally built of logs in 1835, was the last main stop on the Underground Railroad in Pennsylvania. From the church, fugitive slaves were transported across the Delaware River into New Jersey. It is marked as a "historic place" by the Bucks County Conservancy, but there is nothing to indicate it was a part of the road to freedom * * *.

No one knows how many slaves traveled the Underground Railroad to freedom. Charles L. Blockson, a prominent historian at Temple University, says it could have been as few as 30,000 or as many as 100,000 who fled roughly between 1830 and 1860, in what he called "an epic of American heroism."

Later Blockson learned about people such as Harriet Tubman, called Moses to other blacks, who was born a slave in Maryland and fled north to freedom in 1849, to the Philadelphia area, where she joined and inspired the Underground Railroad. At least 19 times, Tubman returned south to conduct more than 300 fugitives, including her own family, northward. He learned about William Still, of whom it was said that 19 of every 20 fugitives passing through Philadelphia stopped at his home on Lombard Street in Society Hill.

Blockson said he was elated at the idea of a historic trail.

"I think it would help foster better interracial understanding and give the present generation a sense of the past and the tribulations of people of all races and creeds who came together for a just cause," said Blockson, now curator of the Afro-American Collection named after him at Temple.

"In my 19 years of research on the subject I have discovered we are losing quite a few of these historic sites because of urban renewal," Blockson said.

"This church is like many throughout the United States which harbored fugitive slaves escaping from the South through Pennsylvania to Canada and freedom," Kostmayer said.

Blockson in an earlier interview said Pennsylvania was the key state in the Underground Railroad and that there was overwhelming evidence that free blacks of the state and its black churches were the primary cause of the success of its clandestine operations.

He said Quakers won an early and richly deserved reputation as friends to fugitive slaves. However, in a 1984 National Geographic magazine article, he wrote that "the fellowship of the Underground Railroad was truly ecumenical, including Roman Catholics, Jews and Protestants as well as freethinkers * * *."

Blockson said runaway slaves entering Philadelphia—as many as 9,000 before 1860—were forwarded to points along the Reading and Pennsylvania Railroads and put on trains to New York state and New England.

Philadelphia's Mother Bethel A.M.E. Church hid hundreds of fugitive slaves, according to Blockson, and stands on the oldest piece of ground continuously owned by blacks in the nation.

Clarence Still, 61, a great-great-grandnephew of William Still, says his family still talks about their famous ancestor and his exploits in forwarding hundreds of slaves to freedom.

He said that Lawnside, N.J. was an all-black community of about 1,000 homes in 1840 and that it was easy to hide runaways there.

Mariline Wilkins, whose great-great aunt was Harriet Tubman, said she believed Tubman rescued more slaves than history books give her credit for.

"The history books say she freed about 300, but she told my mother it was more than that. She told my mother she traveled at night and on weekends. She was supposed to be an ignorant little black woman, but she had God-given sense," said Wilkins, who lives in North Philadelphia.

"I think the bill is worthwhile," she said. "Many people think the Underground Railroad was just a myth. It was not a myth."

STOP EFFORTS TO PRIVATIZE SOCIAL SECURITY

HON. MARY ROSE OAKAR

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 23, 1990

Ms. OAKAR. Mr. Speaker, today I have introduced a sense-of-the-House resolution urging the House to resist and defeat recent efforts to privatize the Social Security Program. My resolution is designed to galvanize congressional support to resolve the true concerns of the American people regarding the Social Security trust fund reserves.

I think the Congress should recognize the proposal to privatize the Social Security System for what it is: an effort to take advantage of the current debate regarding the misuse of Social Security trust fund reserves in order to ultimately serve the most important social contract ever devised. The Social Security System has been the most important, popular, and intelligent Government program for the last 50 years. Its social contract with the American people continues to form the bedrock of American social policy. To privatize the system would alter a successful and popular program and would be tantamount to congressional abdication of the most important Government-citizen agreement of all time.

One of the reasons for Social Security's extreme popularity is its central role in meeting the needs of Americans of all ages. Not only does Social Security provide supplemental or total retirement income for senior citizens, it also provides critical income for many of the most vulnerable citizens in our Nation. Social Security provides income for the disabled, the blind, and for motherless and/or fatherless children. Indeed, the positive effects of Social Security are felt across all generations.

To convert this extremely well-run program to a system of private accounts would, in effect, tell our constituents that the Congress is no longer interested in helping Americans prepare for their retirement years. It would also say that by decoupling the retirement accounts from the other accounts within the Social Security System we really don't care about the disabled, the blind, and motherless and/or fatherless children. Furthermore, it undermines the fairness and progressivity of the present system with a plan designed to give our citizens only what they pay into the system. In many ways, this is an extension of the basic Reagan administration theme of shifting the burdens of Government to the poor and middle class. I strongly resist this concept and call for all Members of the House to join me.

The 1983 bipartisan commission that devised the present funding schedule for the Social Security System was correct when it set up the current trust fund reserve system. The commission properly foresaw the need

for increased national savings to fund the retirement needs of the baby boom generation. All accounts of the commission's work indicate that the financing plan is working perfectly and should not be tampered. Privatizing the Social Security System would unwisely change our success. Short, if it ain't broke, don't fix it!

The true solution to our present dilemma is to change the Federal budget deficit calculations to remove the Social Security trust funds from the deficit calculations. Only by changing the deficit calculations can we secure the trust fund reserves for future retirees. If, instead, we vote to retain the current deficit calculation, we are allowing the robbery of dedicated Social Security revenues to continue. This is the only responsible, reasonable, and honest public policy for America.

Mr. Speaker, again I urge all of my colleagues to cosponsor my resolution to resist the attempt to convert the Social Security Program to a private system which would undermine the most important, successful, and popular social contract of the last 50 years.

WOMEN HAVE A RIGHT TO CHOOSE

HON. JOSEPH E. BRENNAN

OF MAINE

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 23, 1990

Mr. BRENNAN. Mr. Speaker, yesterday marked the seventeenth anniversary of Roe versus Wade, the landmark Supreme Court decision protecting a woman's right to choose.

Men and women in virtually every major city across this Nation rallied Monday to recognize the importance of this decision. I joined them in affirming the wisdom of the court 17 years ago by sending the following letter to be read to those who gathered in Bangor, MA, to show their support for choice.

JANUARY 22, 1990.

DEAR FRIENDS: Seventeen years ago, in the *Roe* v. *Wade* decision, the United States Supreme Court guaranteed a woman's right of choice on the difficult issue of abortion.

As a Member of Congress, I have consistently supported *Roe* v. *Wade*, and a woman's right to make her own decision on this very personal issue. But within the last year, women's rights have been threatened by the Court's Webster decision, and its consideration of other abortion cases.

Congress now has the opportunity to affirm its support for *Roe* v. *Wade*. I am pleased to announce today that I am a cosponsor of the Freedom of Choice Act, which simply codifies into law the rights guaranteed in that landmark decision.

Abortion is not an easy issue. I have struggled with it myself, as many people have. But I thought deeply about the issue, and the conclusion I reached, while I was still Governor, is that government should not be involved in making this most personal of all decision for a woman. The ultimate decision should be left where it belongs: not with a Congressman, not with a policeman, but with the woman herself.

As Supreme Court Justice Harry Blackmun said: "Few decisions are more personal and intimate, more properly private, or more basic to individual dignity and autonomy."

I will continue to oppose any efforts, at the state or federal level, to retreat from the rights guaranteed women in *Roe* v. *Wade*, I will work for passage of the Freedom of Choice Act in Congress.

Thank you and best wishes.

Sincerely,

JOSEPH E. BRENNAN,
Member of Congress.

LOW-INCOME HOME ENERGY ASSISTANCE PROGRAM EMERGENCY APPROPRIATION

HON. OLYMPIA J. SNOWE

OF MAINE

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 23, 1989

Ms. SNOWE. Mr. Speaker, today I am introducing legislation that will appropriate an additional $200 million for the Low-Income Energy Assistance Program. We are all aware of the dramatic rise of oil prices that impacted much of the Nation in the past 2 months. This is a critical issue for the people of the United States and one which must be fully investigated by the Congress and the executive branch. I have written to the Energy and Justice Departments urging a full investigation by both Departments. I know that many of my colleagues and many Governors have made similar requests.

However, the reason for the oil price increase is only one issue that must be addressed. There is another, more immediate, crisis that has resulted from the high fuel oil prices. Lower temperatures, which increased demand, and higher oil prices, which reduced the benefit of energy assistance to consumers, combined to severely deplete the Low-Income Home Energy Assistance Program funds for many States.

The State of Maine was particularly affected by this problem. Not only was the State faced with the coldest December on record, but they were also faced with oil prices that increased an average of 80 percent in the space of a month. These two factors combined to severely impact Maine's Home Energy Assistance Program and the Community Action Agencies that are responsible for distributing energy assistance funds. Overall, 1,900 more applications for energy assistance had been received at the end of December than at the same time a year ago. This, combined with the abnormally high oil prices, caused recipients to receive less oil for the assistance they received.

These demands have depleted Maine's Federal low-income energy assistance grants and have caused the State to seek emergency funding to keep the program funded through the remainder of the winter. While Governor McKernan and the State legislature move to release $1.7 million in oil overcharge money, even this may not be enough to serve the qualified applicants in the State. I have asked that the Office of Management and Budget release remaining funds for LIHEAP, but it is also clear that more funds will be needed if this program is to continue serving those in need. That is why I am introducing this legislation for a supplemental appropriation to this program.

Mr. Speaker, I believe that the Congress must act quickly to address the unprecedented oil price increases that devastated much of the United States. I hope that our efforts will lead to an understanding of why the increase occurred and to solutions for preventing a recurrence. It is critical that we take the necessary steps to ease the impact on those who suffered as a result of the unparalleled price increases for home heating oil. I ask my colleagues to join with me in seeking additional assistance for the States that have been so severely impacted by the weather and the high oil prices.

TEACHING DEMOCRACY IN NEW MEXICO

HON. JOE SKEEN

OF NEW MEXICO

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 23, 1990

Mr. SKEEN. Mr. Speaker, we have just witnessed the closing of a decade in which millions of people who had long suffered from repressive regimes have toppled those regimes in their quest for freedom and democracy. We, who have benefited from the longest lasting constitutional democracy in history, should rejoice in the overthrow of those tyrannical governments and in the recognition by their citizens of the importance of the principles and values of free government we have cherished for so long.

We must wish the people of these nations well in the difficult tasks that lie ahead. And, we must do everything we can to ensure the success of their endeavors to establish governments based upon the principles of constitutional democracy.

At the same time, we must not neglect to pass on to our own youth the understanding of the fundamental principles and values of our democratic institutions that leads to a reasoned commitment to their preservation and improvement. In this regard, I am most pleased to commend the efforts of Nancy Blaugrund, an educational leader in New Mexico's Second Congressional District, whose dedication to the improvements of the civic education of our students has been exemplary. Nancy coordinates the "We the People * * *" bicentennial programs on the Constitution and Bill of Rights, which include the National Bicentennial Competition, its noncompetitive companion program, Congress and the Constitution, and the National Historical Pictorial Map Contest in the Second Congressional District.

Through the dedicated and voluntary efforts of Nancy Blaugrund, thousands of upper elementary, middle, and high school students have studied the program's curriculum. This curriculum, incorporated in the "We the People * * *" text, introduces students to the philosophical ideas of our founders, the historical background of the Philadelphia Convention, and the issues and debates that shaped the writing of our Constitution. Students learn how our Government is organized and how it protects the rights and liberties of all citizens.

Finally, and most important, students learn of the responsibilities which accompany the rights of citizenship in a democracy.

It is ironic that while those who have experienced repressive regimes throughout the world are clamoring for the right to vote in free elections, in the United States, only one out of five eligible voters under the age of 30 takes advantage of that very right. With so few young people understanding the purpose and importance of our Constitution, it is clear that we must do all we can to turn the tide of political apathy into a wave of active and informed participating. I am pleased to express my admiration and appreciation to Nancy Blaugrund for her impressive contributions to the development of competent and responsible citizenship.

TRIBUTE TO ROSE KUSHNER

HON. CONSTANCE A. MORELLA

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 23, 1990

Mrs. MORELLA. Mr. Speaker, Montgomery County, the State of Maryland, and the entire country suffered a tragic loss with the death of Rose Kushner, a psychologist, journalist, and advocate for breast cancer patients.

Rose Kushner was internationally known for her advocacy of the rights of breast cancer patients, writing a number of books and articles on the subject, and lobbying State and Federal officials on these issues for many years. First diagnosed with breast cancer 16 years ago, Rose worked to ensure the rights of women to participate in the decisions surrounding the diagnosis and treatment of their breast cancer. The current procedure, known as the two-step procedure, in which the woman is first told of the results of her biopsy before any decisions are made about the treatment, is now the norm throughout the world. Rose has received much of the credit for the use of this procedure.

She worked tirelessly for progress in the treatment of breast cancer, a disease which she believed was ignored. Rose played an integral role in the organization of the National Institutes of Health Consensus Conference on Breast Cancer and promoted the use of hormonal therapy, rather then chemotherapy. Sacrificing her own privacy, she used her own personal case in order to advance her cause. She offered counsel, support, and advice to countless breast cancer patients, even opening a hotline from her own home.

Rose wrote many books and articles on breast cancer, and founded the National Breast Cancer Advisory Center and, most recently, organized Breastpac, a political advocacy and lobbying organization. In 1980, she was appointed by President Carter to the National Cancer Advisory Committee, on which she served for 6 years. Rose was a member of the Montgomery County Commission on Health and was appointed last year to the American Cancer Society Breast Cancer Task Force. She received many awards for her work, including the layman's award from the Society of Surgical Oncology for "outstanding contributions to the fight against cancer" which she was to have accepted in May.

Rose Kushner was one of my constituents, a Kensington, MD resident who had lived in Montgomery County since 1955. She attended Johns Hopkins University, Baltimore Junior College, and Montgomery College. She graduated with honors from the University of Maryland in 1972.

I had the privilege of working with her for the passage of several bills to improve the rights and benefits of Medicare and Medicaid breast cancer patients, and to increase funding for breast cancer research at the National Institutes of Health. Rose was a compassionate, tireless, and extremely effective advocate for her cause, and she will be missed.

I know many of my colleagues join me in conveying my sympathies to her husband Harvey and the other members of her family. Certainly, there is some comfort in knowing that Rose's memory will live on to inspire future strides in breast cancer research and the rights of the women who suffer from this disease.

THE GOLDEN BUFFALOES—WHAT A SEASON

HON. JOEL HEFLEY

OF COLORADO

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 23, 1990

Mr. HEFLEY. Mr. Speaker, I am honored today to recognize the University of Colorado Buffalo football team as they are the consensus No. 1 team in the Nation for the first time in their history.

From my home State of Colorado, the Golden Buffaloes will go head-to-head against Notre Dame in the 1990 Orange Bowl. This will be CU's fourth journey to Miami, the first time since 1977.

Celebrating its 100th season of intercollegiate football, Colorado is enjoying their fourth longest winning streak in the school's history.

Head Coach Bill McCartney is in his eighth season at the helm of the Buffaloes, compiling a 46–44–1 record. McCartney's careful guidance and inspiration have led Colorado to the most successful season of their history.

Although preseason publications had not projected the Buffaloes as conference champs, they have proven themselves worthy of challenging the Fighting Irish for the national championship. Their successes have brought them much well-deserved acclaim.

Quarterback Darian Hagan was selected the Sporting News' "Player-of-the-Year" in college football for 1989. Plus the Colorado Heisman Trophy candidate was the first CU quarterback since 1975 to complete over 50 percent of his passes.

I see a bright future for the Golden Buffs. I wish them the very best of luck in Miami and hope that this is the first step in a long line of national championships that will come their way.

HAROLD RUPP: WE NEED MORE MEN LIKE HIM

HON. BOB TRAXLER

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 23, 1990

Mr. TRAXLER. Mr. Speaker, I rise today to pay tribute to a gentleman who is a great humanitarian, and whom I am proud to call my close and dear friend.

Harold Rupp of Bay City, MI, is an individual who has selflessly dedicated his time throughout his life so that others in his community may have a chance for a happier and better life. He is being honored on February 21 by the Boys and Girls Clubs of Bay County at a "Night to Remember" in appreciation for his 25 years of invaluable service to the clubs. I am very pleased to be joining in this special celebration.

The program for the celebration of Harold's generosity quotes his philosophy which is such an important hallmark for the question of how we can help the youth of today: "Give a kid a place to go, something to do, some guidance, lots of love, the kid will beat the streets." If only more of us could adopt his philosophy as our own, the news would be filled with many more stories of accomplishment, and fewer of frustration.

Over Harold's many years of civic involvement, he has served as a president of the Bay County Baseball Federation. He has been the president and a board member of the Bay County Recreation Commission. He has been a member of the Lions Club, the Elks Club, the American Legion, and the Disabled American Veterans. He has supported the business community, of which he is a vital part, through the Bay Area Chamber of Commerce.

He has held many other positions of public responsibility, including an appointment by President Jimmy Carter to the President's Council on Small Business, an appointment by Michigan's Gov. Jim Blanchard to the Governor's Council on Small Business, and a number of additional years of service to the Michigan Department of Social Services, Bay County, and the Bay County Medical Care Facility.

Harold's crowning glory has been his service to the Boys and Girls Clubs of Bay County. As a charter member of the clubs foundation, he has been responsible for several very successful fund raising efforts. His work on both the first and second capital campaigns has helped to raise nearly $1 million, while additional efforts have enabled him to raise over $5,000 each year for the past 10 years for the operations of the clubs.

Mr. Speaker, some people say "why doesn't somebody do something to help create more opportunities for our youth". Harold Rupp is one of those "somebodies" who does do something. His enthusiasm and his devotion have encouraged many others to share their time and resources for the boys and girls of Bay County so that his grandchildren Jennifer and Patrick can be very proud to say that Harold Rupp is their grandfather. His wife Norine, while sacrificing time with Harold, can be very proud to be associated with a

man who cares so much about others around him.

Mr. Speaker, Harold Rupp is an outstanding individual who has made the time to give back to his community to help make it a better place. We truly do need more men like him.

MIMI EBERHARDT, STOCKTONIAN OF THE YEAR

HON. NORMAN D. SHUMWAY

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 23, 1990

Mr. SHUMWAY. Mr. Speaker, at this time I ask that my colleagues join with me in paying tribute to an outstanding woman who is not only my constituent, but also a very close friend of mine: Mrs. Mimi Eberhardt, of Stockton, CA. Mimi has just been selected "Stocktonian of the Year."

With Mimi Eberhardt's selection as the 36th Stocktonian of the Year, Stockton can boast the first-ever husband and wife team to be so honored: her husband received the award in 1975. Appropriately enough, Mimi was surprised with the news of her selection by being presented with a UOP-promoting teddy bear. Mimi's leadership as a founding director of "Hug-Me-Bears" to help abused children, as well as her founding membership in "Orange-Aid," which promotes UOP's community relations, are both well known in our community.

In praising Mimi Eberhardt for her full-time job of being a volunteer, the Stockton Board of Realtors could not have chosen a more apt description! In fact, I find it difficult to pinpoint an area of community involvement which has not benefited from Mimi's leadership, commitment and compassion. That she has done so while raising four daughters and being a devoted and supportive wife is even more indicative of Mimi's caring and competence.

Mimi's dedication to our youth is embodied in so many of her undertakings. Not only has she worked on behalf of abused children and welcomed college students—she has also served as a founding member of the Stockton Police Youth Activities, raising funds for athletic activities for young Stocktonians, many of whom are underprivileged. She is also a charter member of former Police Chief Julio Cecchetti's Blue Ribbon Task Force Committee which raised funds for underprivileged youth. Special Olympics has benefited from Mimi's efforts since the group was founded; she continues to serve as food cochairman. Women's athletic programs at UOP also receive Mimi's help through her active support and fundraising efforts.

Mimi contributed 13 years to the board of directors of the Bacon Bash, and she has served as cochair of the pregame fundraising luncheon.

She is a founding member of the Friends of the Blind Center, as well as a 10-year member of the board of directors of the Community Blind Center. Mimi also has worked on behalf of San Joaquin County Parents of Deaf Children.

Goodwill Industries has benefited from Mimi's service as a past director, and as an executive committee member.

Ducks, Unlimited, has enjoyed Mimi's dauntless commitment through her service as a cofounder of Ruffled Feathers, the ladies' auxiliary which has raised $90,000 in just 4 years to help maintain and develop breeding habitat for waterfowl.

The Haggin Museum Junior Women's Group, a valuable and effective fundraising arm for the musem, has benefited from Mimi's founding membership. She is also a former director of the Alan Short Gallery.

The Easter Seal Society, the Rape Crisis Center, the Gemini Sickle Cell Anemia Program, the Hanot Foundation, the Asparagus Festival, the Neighborhood Watch Program—these are but a few more of the many worthy causes to which Mimi Eberhardt has donated time, attention, and expertise. She is committed to Stockton and all of its residents, and has greatly improved the quality of life for so many Stocktonians.

Mimi Eberhardt embodies all the qualities and traditional values that we treasure as Americans. She symbolizes neighbor helping neighbor, the generous, caring, voluntary spirit which is so capable of accomplishing so much. Stockton is fortunate to have Mimi, and all of us owe her not only our admiration, but also our gratitude.

Speaking personally, I have always been very pleased to count Mimi among my personal friends. To Mimi, as well as her husband and daughters, I am pleased to say thank you from the bottom of my heart for duty above and beyond the call, and every best wish for continued success and fulfillment.

BERKS COUNTY FEDERATION OF WOMEN'S CLUBS CELEBRATES 65TH ANNIVERSARY

HON. GUS YATRON

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 23, 1990

Mr. YATRON. Mr. Speaker, this year, the Berks County Federation of Women's Clubs will celebrate its 65th anniversary and, therefore, I would like to take a moment to recognize this truly outstanding organization which has contributed so much to the communities of the Sixth District of Pennsylvania.

Made up of 36 women's clubs with a membership of over 2,400 women, the Berks County Federation of Women's Clubs has had an extraordinary and profound impact on the lives of many people. Through the hard work and dedication of its membership, the federation has helped improve community services in our area and has made these services more accessible to those in need.

Established on March 6, 1925, the Berks County Federation of Women's Clubs will celebrate 65 years of outstanding service on April 24, 1990. In addition, February 24, 1990 will mark the 25th annual Federation Day, a day set aside specifically to recognize the organizations such as the Berks County Federation of Women's Clubs.

Committed to making a difference through service, the members of the Berks County Federation of Women's Clubs have devoted their time, talents and energy to helping others. Indeed, Mr. Speaker, these outstanding citizens have made a difference and they are to be commended for making the lives of others better and brighter. Thus, it is with great pleasure that I take this opportunity to congratulate all the members of the Berks County Federation of Women's Clubs on their 65th anniversary and to thank them for their continuing commitment to improving our community.

CONGRATULATIONS TO KATHLEEN BRAUN FOR HER EFFORTS TO INCREASE CIVIC AWARENESS

HON. JIM MOODY

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 23, 1990

Mr. MOODY. Mr. Speaker, I rise today to salute Kathleen Braun for her dedication to education and civic awareness in the Milwaukee community. Ms. Braun coordinates the "We the People" bicentennial programs on the Constitution and Bill of Rights for Wisconsin's Fifth Congressional District which I am proud to represent.

In the United States, one of the world's oldest democracies, voter participation has reached a new low. For younger voters the statistics are even more troubling: only one in five eligible voters under the age of 30 goes to the polls. Surveys of geographical knowledge among high school students reveal a distressing lack of education; some students are unable to pick out the United States itself on an unmarked world map.

The "We the People" programs seek to address these disturbing trends by educating young people about the Constitution, the three branches of Government, and the Nation's geography. Ms. Braun has volunteered her time and efforts to bring these valuable programs to thousands of upper-elementary, middle and high school students in Milwaukee. Through promotion and administration of the "We the People" national bicentennial competition, Congress and the Constitution program and the National Historical Pictorial Map Contest, Ms. Braun has helped to teach students about how the Government is structured, how it protects the rights and liberties of all its citizens and about the civic responsibilities which accompany the rights of citizenship in a democracy.

Mr. Speaker, I am proud today to salute Kathleen Braun for her leadership and dedication in educating students in Milwaukee about government and responsible citizenship.

LIGHTHOUSE CELEBRATION

HON. CHARLES E. BENNETT

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 23, 1990

Mr. BENNETT. Mr. Speaker, on November 12, Jacksonville celebrated "Lighthouse Celebration Day," and I include Mayor Hazouri's proclamation to that effect. I also include re-

marks made by Adm. James Libscomb at the celebration which included a tour of the modern lighthouse facilities at Jacksonville and of the 1859 predecessor, now on the National Historic Register.

Admiral Libscomb admits to me that his story of the lighthouse is apocryphal, but I think it is worth repeating.

The proclamation and remarks follow:

PROCLAMATION

Whereas: The first lighthouse at the mouth of the St. Johns River was erected in 1830, followed by a replacement lighthouse in 1834; but both were abandoned because of heavy seas and drifting sand; and

Whereas: A brick lighthouse, first lit in 1859, had its light shot out by the keeper to prevent Union forces from entering the St. Johns River; and

Whereas: The Lightship St. Johns, manned by the Coast Guard, guided ships past the shifting sand bars beginning in 1929, replacing the 1859 brick tower which is on the National Historic Register; and

Whereas: Today a modern automated lighthouse, first lit in 1954, stands on a dune at the eastern edge of Mayport Naval Station; and

Whereas: A "Bicentennial Lighthouse Celebration," commemorating 200 years of lighthouses in the United States, will be held on November 12, with tours of the St. Johns Lighthouse, but tours of the old lighthouse as well as live entertainment; and

Whereas: This celebration is being sponsored by the American Lighthouse Historical Society, the Jacksonville Historical Society, the Beaches Historical Society, the Mayport Preservation Society and the Maritime Museum.

Now, therefore, I, Thomas L. Hazouri, by virtue of the authority vested in me as Mayor of Jacksonville, Florida, do hereby proclaim Sunday, November 12, 1989, as Lighthouse Celebration Day and urge all citizens to visit these monuments to shipping safety on this special occasion, and to learn about their historic significance.

REMARKS OF ADMIRAL LIBSCOMB USCG

Welcome to latitude 30°23.1" N, longitude 81°23.9" W., the exact position of the St. Johns Lighthouse. I am Jimmy Libscomb, your master of ceremonies. I am a native born and lifelong resident of Jacksonville and the beaches. I am proud to be a member of the Jacksonville and the Beaches Area Historical Societies, two of the groups sponsoring the opening of the lighthhouse. I am a fanatic about lighthouses.

Major Charles B. Meyer, late of Her Britannic Majesty's Army, the instigator of the project to open this lighthouse to the public during the bicentennial year of the United States Lighthouse Service, will lead us in the pledge and pronounce the invocation.

Let me introduce distinguished members of this community as well as individuals who have played an important role in bringing about the opening to the public of the St. Johns Lighthouse:

The mayor of Neptune Beach, John Kowkabany.

The former mayor of Neptune Beach Ish Brant.

The mayor pro-tempore of Jacksonville Beach, Bob Marsden.

Bill and Freida Trotter, co-founders of the American Lighthouse Historical Society and curators of the exhibits on display in the lighthouse. Bill and Freida have done more than any other people in this community, perhaps even in the Nation, to promote public interest in and love for our lighthouses and the celebration of the Lighthouse Bicentennial. They are remarkably talented individuals, who have successfully led us in a great cause. We are fortunate in this community to have them with us.

Sarah Van Cleve, president of the Jacksonville Historical Society and chairman of the Jacksonville Lighthouse Bicentennial Committee, a most delightful lady to know and with whom to work.

Joe Caldwell, president of the Beaches Area Historical Society.

Sandra Tuttle, secretary of the Mayport Preservation Society.

Commander Tim Taylor, USN, who heads up the Public Affairs Office of Naval Station Mayport and has worked tirelessly to promote this event and keep the members of the local committee on a true course without deviation or variation.

Julian Barrs of Naval Station Mayport, who has coordinated all the physical preparations for today's event.

Although Congressman Bennett will be our principal speaker, we are also pleased to have several other distinguished individuals on the stage, whom I shall call upon to make a few brief remarks.

Captain Peter A.C. Long, Commanding Officer, U.S. Naval Station Mayport.

LCDR Douglas P. Rudolph, Commander, Coast Guard Group Mayport.

Becky Jarboe, aide to Jacksonville Mayor Tommy Hazouri, who will present the mayor's proclamation.

Jim Jarboe, member of the Jacksonville City Council, representing the Jacksonville Beaches.

Last, but certainly not least, I want to introduce Master Chief Paul Leone, USCG (Ret.), the last resident lighthouse keeper of this lighthouse before it was automated. The master chief has the distinction of having made naval and maritime history when he successfully challenged the USS *Forrestal* during his tour of duty here as lighthouse keeper. The aircraft carrier was inbound from the east when a power surge knocked out all her electronic navigation equipment. The forward lookout reported to the bridge that there was an object dead ahead with a flashing light and on a constant bearing. The captain of the *Forrestal* signalled the object to change course 20° to starboard. Seconds later the captain received a signal from the object telling him to change course 20° to starboard. Irritated, the captain signalled "I am a captain in the United States Navy, and I order you to change course 20° to starboard." Seconds later the captain received a signal that said, "I am Paul Leone, a first class petty officer in the Coast Guard. Change course 20° to starboard." With this, the captain was really irritated and signalled back, "I am the attack aircraft carrier, USS *Forrestal,* and I command that you immediately change course 20° to starboard." Seconds later *Forrestal* received this signal: "I am the St. Johns Lighthouse. Change course 20° to starboard or you'll be sorry." *Forrestal* complied.

TRIBUTE TO MAJ. GEN. RAYMOND A. MATERA

HON. LES ASPIN

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 23, 1990

Mr. ASPIN. Mr. Speaker, when the people of Wisconsin speak of the Wisconsin National Guard, they do so with great pride. And they have good reason to. The Wisconsin National Guard has become the recognized leader in readiness and professionalism. More than anyone else, we owe this great distinction to one man—Maj. Gen. Raymond A. Matera.

While serving as the adjutant general of the Wisconsin National Guard, General Matera's dedication and leadership resulted in an unprecedented growth in responsibilities and accomplishments. He increased the strength of the Army National Guard by over 20 percent, he increased combat capabilities by restructuring and upgrading obsolete battalions, and he created a highly successful armory rebuilding program. Most importantly, his guidance was responsible for the tremendous expansion of training programs for both officer and enlisted personnel. This foresight and leadership have resulted in the superb combat readiness and mobility of Wisconsin's National Guard.

Because of General Matera's efforts, the Wisconsin National Guard has made an increasingly important contribution to the national defense. The 32nd Infantry Brigade was selected to participate in the 1986 REFORGER exercise. The 128th Tactical Fighter Wing fulfilled regular USAF combat readiness standards and was assigned responsibilities in Europe and Panama. The 128th Air Refueling Group has become a necessary asset for the Strategic Air Command. These three examples are but a small list of the contributions made by Wisconsin Guard members during General Matera's tenure.

Undoubtedly, General Matera's accomplishments are the result of his unfailing dedication and countless hours of hard work. But I think his most noteworthy quality was seen at the personal level. General Matera exemplified the phrase "leadership by example". Wisconsin Guard members were accustomed to seeing their Commander-In-Chief appear along side them at almost any time. Whether it was a formal setting such as a National Guard Association or an enlisted association function, or in the day-to-day situations—out in the field, on the flight line, or in the shops—General Matera was never too busy to get involved, to lend a hand.

In recognition of his superior achievements, General Matera has received numerous decorations, including the Legion of Merit, the Distinguished Flying Cross, the Air Medal with cluster, a Distinguished Unit Citation, and many others. Additionally, for his singularly distinctive contribution to the State of Wisconsin, he was awarded the first Wisconsin Distinguished Service Medal.

General Matera's presence will be sorely missed when he retires this year. He has been the catalyst in rebuilding the Wisconsin National Guard into a strong, enthusiastic, and

capable force. He has made a lasting contribution to the State of Wisconsin, and to the United States of America. For this he will be remembered by the people of Wisconsin, and the people of this Nation, for many years to come.

A TRIBUTE TO REAR ADM. RODNEY K. SQUIBB, SC, USN

HON. MARVIN LEATH

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 23, 1990

Mr. LEATH of Texas. Mr. Speaker, I rise today to honor an outstanding and exemplary member of the U.S. Navy, Rear Adm. Rodney K. Squibb, who is retiring February 1, 1990, after 44 years of naval service.

Our Nation is indeed fortunate to have benefited from the dedication of this great American. His years of unselfish devotion to duty have left their mark on the Nation and on the millions of sailors and families who benefited from his service.

Admiral Squibb is truly a unique individual, rising through the ranks through every enlisted grade. As such, he could well empathize with the needs of all naval personnel. His most recent assignment as commander of the Naval Resale and Service Support Office culminated his admirable career as he charted a course to improve quality-of-life services that touch each sailor every day of the year. He raised the Navy's exchange and commissary system to new heights and instituted quantum improvements to the many services offered by this agency. His leadership inspired all who had the privilege to work with him to go the extra mile in the achievement of excellence.

Admiral Squibb spent his formative years in Morton, MN, graduating from Morton High School in 1945 as senior class president. On October 29, 1945, he enlisted in the U.S. Navy and served on various ships from patrol craft and destroyers to destroyer tenders and shore stations. He advanced through every enlisted grade and then, in 1957, while at the Massachusetts Institute of Technology, he was commissioned an ensign in the supply corps.

His first Navy resale tour was as the Navy exchange officer of the Naval Air Station, Oppama, Japan, with a follow-on tour as the Navy exchange officer, Naval Air Station, Minneapolis, MN. Upon completion of this tour he returned to sea as the senior assistant supply officer, U.S.S. *Yellowstone* (AD 27). His next assignment was with Commander Service Squadron Eight as the senior staff supply officer with logistics responsibilities for 37 ships ranging in type from cable layers to Polaris missile stores ships.

Returning to sea duty in October 1969, he reported as the assistant supply officer, U.S.S. *Kitty Hawk* (CV 63), making a combat deployment to Southeast Asia in 1970–71. He then served at the Naval Sea Systems Command and Naval Supply Systems Command in Washington, DC. In 1975, he was selected as the first commissioning supply officer of the new nuclear aircraft carrier U.S.S. *Dwight D. Eisenhower* (CVN 69) and served in this capacity for 3 years. During his total career—enlisted and officer—Admiral Squibb has served on 11 ships, commissioning three ships, U.S.S. *PCE 902,* U.S.S. *Fechteler* (DDR 870), and U.S.S. *Dwight D. Eisenhower* (CVN 69). In addition, he decommissioned one ship, U.S.S. *PC 778.*

Subsequently, Admiral Squibb reported to the aviation supply office, where his duties included inventory control officer, planning and data systems officer, and executive officer. In 1981 he reported as the Assistant Chief of Staff (Supply), Commander Naval Air Force, U.S. Atlantic Fleet, with logistics readiness responsibilities for 8 aircraft carriers, 5 Marine air groups, and 17 shore stations, totaling in excess of 1,600 aircraft.

In June 1984, Admiral Squibb returned to the aviation supply office in Philadelphia, PA, this time as the commanding officer and base commander, with responsibilities for the worldwide material readiness for all U.S. Navy and Marine aviation forces. In September 1986, he returned to the Naval Supply Systems Command in Washington, DC, as the deputy commander, Fleet Support, Corporate Plans and Logistics. On July 10, 1987, he assumed the duties of commander, Navy Resale Services Support Office, Staten Island, NY.

Admiral Squibb was educated at the University of Minnesota, Old Dominion College, and he is a graduate of the Naval Postgraduate School, Monterey, CA. His graduate education also includes studies at George Washington University and the University of Pittsburgh.

His success has been greatly enhanced by the support of his family. He is married to the former Lavada Carpenter. They have a son Mark and a daughter Sandra.

Admiral Squibb's decorations for superior performance ashore and afloat include the Navy Distinguished Service Medal, Legion of Merit—two gold stars in lieu of second and third awards—Meritorious Service Medal, Navy Commendation Medal, and Navy Achievement Medal.

Admiral Squibb, your lifetime of service is hereby recognized with appreciation by the American people and for your contributions to the peace and security of this great Nation. I urge my colleagues to join me in honoring a great American, Rear Adm. Rodney K. Squibb, Supply Corps, U.S. Navy.

PASTOR'S SERVICE MARKED IN GERMANTOWN, TN

HON. DON SUNDQUIST

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 23, 1990

Mr. SUNDQUIST. Mr. Speaker, a few weeks ago I had the privilege of joining the congregation of Germantown Baptist Church in Germantown, TN, in saluting their pastor, Ken Story, on 25 years of faithful service.

Because Pastor Story has been so active in community affairs and played so vital a role in shaping the character of one of Tennessee's fastest growing cities, I want to share with my colleagues something about him and his contribution.

Germantown Baptist Church, Germantown, TN, celebrated the 25th anniversary of Dr. Kenneth P. Story's pastoral ministry on Sunday evening, December 3, 1989, with a dinner at the Omni Hotel. About 725 members and guests attended. Honored guest included Dr. Landrum Leavell, president of New Orleans Baptist Seminary, and Dr. Hyran Barefoot, president of Union University. There were many other distinguished pastors and local political figures in attendance.

Dr. Story came to Germantown Baptist Church as pastor on December 6, 1964. He, his wife Elizabeth, and a small son, Steve, moved into the pastor's residence across the street from the white clapboard chapel which was rebuilt in 1870 following the Civil War. The church was organized in 1838 and the original building was burned during the Civil War.

While Liz was setting up housekeeping in their home, Ken began his ministry. Along with his pastoral duties he assumed the duties of janitor, typist, mimeograph operator, and maintenance man. When Ken arrived at Germantown the church had a Sunday school enrollment of 167 with an average attendance of 87. The average weekly gifts were $191 and the annual contributions to the Southern Baptist Convention were $830.

Things happened pretty fast once Ken got to work. In late 1971, the congregation moved from the small chapel to an interim sanctuary, the first phase of a six-phase building program. The small chapel still stands and has been designated as a historical site. During this busy time, Ken managed to earn his doctorate degree from New Orleans Seminary in 1976. The last phase of the six-phase building program was completed in 1986 when a 50,000-square-foot educational building and office complex became operational. The total building program included a Christian Family Center—gym, crafts, et cetera—a new 1,400-seat sanctuary and conversion of the interim sanctuary and building into a children's building. The church has grown mightily under Dr. Story's leadership. Presently, there is a Sunday school enrollment of 4,150 with an average weekly attendance of 1,819. The weekly offerings average $52,539 and $241,000 was contributed to the cooperative program last year. Dr. Story conducts three services on Sundays at 8:30 a.m., 9:45 a.m., and 11:00 a.m. There are also Sunday schools at 9:45, and 11:00 a.m. The church just recently purchased 64 acres in Germantown and has laid plans for moving the entire church as soon as the Lord provides.

Dr. Story has reached out far beyond the borders of Germantown. The church has established a mission in the small community of Rossville where each Wednesday about 100 or so local residents come for lunch and preaching services. The church also provides a clothes closet for the visitors to the mission. Dr. Story has led church members on mission trips to Michigan, Alaska, and the Philippines in the past several years. A group of laymen make several yearly mission trips to churches where they are invited.

Dr. Story served as president of the Tennessee Baptist Convention in 1988 and was just recently elected to this body's executive board.

The most fitting tribute, however, comes from members of his church, who wrote, "Dr. Story is a shining example of a pastor who reflects God's love for each of us. He is our friend, our counselor, our mentor, our pastor, and we love him."

EARTH DAY 1990

HON. BENJAMIN A. GILMAN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 23, 1990

Mr. GILMAN. Mr. Speaker, I am pleased to rise in support of the congressional countdown to Earth Day.

Almost 20 years ago, on April 22, 1970, the United States saw the beginning of the environmental movement, as well as the largest organized demonstration in history. Now, Earth Day, 1990, is a short 90 days away, and we have the opportunity once again to enact landmark environmental legislation to address new environmental problems which we are only beginning to understand.

Because the problems we face today are problems which did not exist or were not imagined in 1970, we must face these new challenges with flexibility and understanding.

Amending the Clean Air Act to reduce the problems of acid rain, air toxics, and urban air quality, should be a major accomplishment of the second session of the 101st Congress.

Additionally, the recent indication of support from the Bush administration for a Cabinet level Environmental Protection Agency is encouraging and would be a fitting tribute to the first Earth Day which lead to the creation of the EPA.

However, the difficulties facing us today are so vast that they threaten not only our Nation, but the world as well. Legislation to deal with the impending threat of global warming is essential to forestall any potential devastation. Furthermore, global water scarcity and food production are issues that cannot be ignored.

With the complex issues facing our environment, it is time again for an Earth Day; a day for everyone to celebrate our planet and become actively involved in solving the many problems facing our environment.

Mr. Speaker, I urge my colleagues to join today in support of Earth Day 1990.

YOSEMITE'S 100TH BIRTHDAY

HON. GEORGE MILLER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 23, 1990

Mr. MILLER of California. Mr. Speaker, October 1, 1990, is Yosemite National Park's 100th Birthday. This is a time for all of us throughout this country to celebrate.

We should celebrate that a place of such spectacular beauty—the soaring granite domes, the massive, ancient sequoia trees, the pristine alpine wild areas, the forests and waterfalls—exists.

We should celebrate that our predecessors, 100 years ago, had the wisdom and foresight to preserve this area for our enjoyment and the enjoyment of our children. Like millions of other Americans over the last century, my family and I have spent many happy days hiking, camping, and exploring Yosemite. These are treasured memories for me.

As we celebrate Yosemite's birthday, we should also pay tribute to John Muir, a resident of Martinez, CA.

John Muir traveled for years throughout the Sierra Mountains of California. In his book, "The Mountains of California," Muir captured the essence and magic of those mountains when he wrote:

> Along its [the Central Valley] eastern margin rises the mighty Sierra, miles of height, reposing like a smooth, cumulous cloud in the sunny sky and so gloriously colored, and so luminous, it seems to be not clothed with light, but wholly composed of it, like the wall of some celestial city. Along the top, and extending a good way down, you see a pale, pearly-gray belt of snow; and below it a belt of blue and dark purple, marking the extension of the forests; and along the base of the range a broad belt of rose-purple and yellow, where lie the miner's gold fields and the foot-hill gardens. All these colored belts blending smoothly make a wall of light effably fine, and as beautiful as a rainbow, yet firm and adamant.

These eloquent words—in my mind—capture Yosemite.

But, Muir did far more than explore, study, and write about California's mountains. He began to fight—as early as 1881—to protect Yosemite, when he drafted a bill. He worked hard to convince Presidents Harrison, Theodore Roosevelt, and Taft to set aside Yosemite, and other lands as national parks. He was finally successful in convincing Congress to create Yosemite and Sequoia National Parks.

On this centennial of Yosemite's creation, let us remember what our great national parks teach us. It is our responsibility to protect these and the other special wild areas in this Nation. We have a duty to ourselves and future generations to preserve this country's natural areas—much as the duty our predecessors had to us. Yosemite's 100th birthday is the opportunity to renew our own commitment to conservation.

EXPOSING THE TRUTH WITH THE SOCIAL SECURITY TRUST FUND

HON. BYRON L. DORGAN

OF NORTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 23, 1990

Mr. DORGAN of North Dakota. Mr. Speaker, on January 1, 1990, the FICA payroll tax which finances the Social Security system increased from 6.06 percent—7.51 percent with Medicare—on the first $48,000 of income of 6.2 percent—7.65 percent with Medicare—on the first $51,000 of income. This represents an increase of $320 for an employee paying the maximum FICA tax as well as an increase of $320 in the contribution of the employer.

This scheduled increase is part of the 1983 Social Security Reform Act, which was designed to create substantial Social Security reserves to meet anticipated needs when the baby boomers retire after the turn of the century. Unfortunately, these sizable yearly Social Security reserves are now being used in the Gramm-Rudman calculations as an offset against operating budget deficits. The fact is, yearly Social Security reserves—totaling $68 billion this year—are being used as a substitute for other reserves that would be needed to meet the same deficit targets.

This is dishonest budgeting. It's a hoax. It is using one of the most regressive forms of taxation as a major source of new revenue to reduce the Federal deficit. It is one of the great hoaxes of modern financial history to see a President and Congress misuse upwards of $70 billion in new money each year—from the most regressive type of taxes—to make the Federal budget deficit appear to be getting smaller when it's not.

This must be stopped, and it has to be stopped now. Today, I am introducing legislation with my colleague, Mr. DURBIN, and six other original cosponsors that will take the mask off of this charade. My legislation would return the Social Security tax rate to its 1989 level, 6.06 percent. This would roll back the January 1 payroll tax increase. It seems to me that if the Congress and the administration are going to continue to raid the Social Security reserves, it is grossly unfair and dishonest to continue to raise the payroll tax that funds these Social Security reserves. My intention in introducing this bill is to force the administration and the Congress to take the Social Security reserves out of the budget deficit calculation and truly save these funds for the purpose for which they were collected.

I urge my colleagues to support this legislation to roll back this increase until Congress enacts legislation to stop this giant budget hoax.

IN SIGHT OF LOUISVILLE: A PERSPECTIVE OF LOUISVILLE ARTISTS

HON. ROMANO L. MAZZOLI

OF KENTUCKY

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 23, 1990

Mr. MAZZOLI. Mr. Speaker, I was very excited that, beginning the week of November 13, 1989, and running through December 15, 1989, artists from Louisville and Jefferson County—which I am privileged to serve in the U.S. Congress—participated in an exhibit at the Washington, DC Design Center which provided a unique insight into the art and culture of Louisville.

Everyone in Louisville and Jefferson County was excited about this opportunity to showcase the artistic talent in our community. This exhibit, "In Sight of Louisville: A Perspective of Louisville Artists," included the works of veteran artists as well as newer artists in our artistic community. And, it illustrated the very wide variety of talent—and enthusiasm and energy—of our local artists.

The artists whose works were included in the exhibit were: Tom Butsch, Ying Kit Chan, Madison Cawein, Gaela Erwin, Joyce Garner, Susan Gorsen, James Grubola, Kay Polson Grubola, Ed Hamilton, Billy Hertiz, Suzanne

Mitchell, Pam Pfister, Chris Radtke, Andrew Speer, Chuck Swanson, and Cathy Tuggle.

I hope that my colleagues had a chance to view this exhibit while it was in Washington.

TRIBUTE TO ARNOLD L. HUDGENS

HON. CARROLL HUBBARD, JR.

OF KENTUCKY

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 23, 1990

Mr. HUBBARD. Mr. Speaker, it is my privilege to pay tribute to a long-time friend, Arnold L. Hudgens, who died January 5 at age 76 at Community Hospital in Mayfield, KY.

Mr. Hudgens, a beloved and highly respected Bardwell, KY, resident, was a former sheriff of Carlisle County, the father-in-law of the Carlisle County superintendent of schools, Robert Edward Watson of Bardwell, a veteran of World War II and a member of Bardwell United Methodist Church.

Mr. Hudgens, who was affectionately referred to as "Shug" by friends, was always very helpful to those of us who called on him for assistance. Shug Hudgens and his family were very helpful to me as early as 1967 when I was a 29-year-old candidate for State senator. He was preceded in death by his lovely and talented wife, Martha Turner Hudgens.

Surviving are three daughters, Brenda Watson and Ann Carter, both of Bardwell, and Phyllis Hughes of Virginia; a son, Joe Hudgens of Bardwell; a sister, Mona Coil of Paducah, and several grandchildren.

My wife Carol and I extend to the family of Arnold L. Hudgens our sympathy.

TRIBUTE TO CPL. IVAN D. PEREZ

HON. CLAUDINE SCHNEIDER

OF RHODE ISLAND

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 23, 1990

Ms. SCHNEIDER. Mr. Speaker, Cpl. Ivan Perez of Pawtucket, RI, died a hero's death in combat. He paid the highest price and made the ultimate sacrifice for the United States. We owe him an eternal debt of gratitude.

In the early morning hours of December 20, 1989, Corporal Perez rode into battle. He was in the first Bravo Company platoon to attack General Noriega's headquarters—the Comandancia. During the ensuing firefight, Perez, who manned the .50 caliber machinegun atop an armored personnel carrier, was killed in combat. His bravery helped our Armed Forces to quickly knock out Noriega's headquarters and neutralize any organized opposition.

Our gratitude to Corporal Perez is strong and unquestioned. However, Ivan Perez won the gratitude of another set of people: The Panamanians. During my recent trip to Panama, I saw firsthand the ravages of General Noriega and felt the palpable relief of the Panamanian people. Ivan Perez was a liberator—he died so that millions could live without tyranny.

Today, I am introducing a bill to make Corporal Perez an American citizen. I understand that Corporal Perez planned to apply for citizenship upon leaving the Armed Forces. I feel that it is the least we can do to make him a citizen posthumously.

Today, I salute Cpl. Ivan D. Perez as a great American and a fellow Rhode Islander. May his memory live forever.

CITIZENS FEDERAL SAVINGS: THE GOOD NEWS ABOUT S&L'S

HON. WILLIAM LEHMAN

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 23, 1990

Mr. LEHMAN of Florida. Mr. Speaker, if all savings and loans were operated like the Miami-based Citizens Federal Savings, there wouldn't be a need for bailout bills and criminal prosecutions.

Founded by my old friend, the late David Stuzin and brilliantly guided through the past turbulent decade by his son Charles, Citizens Federal has enjoyed several years of profitability; successful expansion into markets in states outside Florida; and a capital reserve that exceeds Federal standards by one third at a time when a quarter of all U.S. thrifts are unable to meet the minimum.

The Miami Herald recently profiled this Miami institution and its remarkable CEO, and I would like to commend this article to the attention of my colleagues.

During these days of savings and loan scandals, closings and failures, Citizens Federal should be a model for every savings and loan.

[From the Miami Herald, Jan. 15, 1990]

THE GOOD CITIZENS

(By Gregg Fields)

Was there ever a better citizen than Jimmy Stewart in *It's a Wonderful Life?*

He was a tireless community worker. He was a selfless civic booster. He was—gasp!—a savings and loan executive.

As an S&L executive himself, Charles Stuzin hasn't found the public to have such warm regard for thrift executives lately, however.

"So after I tell them I'm a thrift executive, I tell them I'm also a lawyer," chuckles Stuzin, chairman of Miami's Citizens Federal Savings.

In reality, if there are worthy successors to Stewart's mythical legacy, they are Stuzin and Citizens Federal, say competitors, analysts and former co-workers.

Citizens is boasting seven years of improving operating profits in an era when even healthy savings associations are losing money. It surpasses new federal capital standards by a third at a time when 760 thrifts—a fourth of the U.S. total—can't meet the minimum. It is looking expansively toward the future at a time when many S&Ls are trying frantically to lop off the excesses of the past.

The key to success: In the 1980s, Citizens went against the grain and stayed conservative. Instead of entering bidding wars for consumer deposits, it quietly sought investors seeking unexciting but safe returns. When thrifts from around the country spent enormous sums of money to enter Florida, Citizens expanded in the unglamorous Midwest.

Perhaps most significantly, as S&Ls were buying junk bonds and building country clubs, Citizens stuck stubbornly to the basically dull business of home loans.

"In an industry that's collapsing, Charlie Stuzin is a real beacon," says Bill Allen, chairman of Citizens competitor Atico Savings. "He's gone out and made money the old-fashioned way. And his integrity is beyond reproach."

Along the way, Stuzin became a national figure within his industry. It is an industry whose foundations are being badly shaken, he concedes. "I think half the thrift industry will disappear," he says. "I'm talking about the healthy ones."

When asked whether Citizens will be a survivor, or an acquisition, he shrugs. "Independence isn't important."

A FATHER'S ADVICE

Independence was important to Stuzin's late father, David. An accountant by trade, he moved from New York City to South Florida and became a bank auditor.

"He realized there weren't that many S&Ls, and there were none in Hialeah," says his widow, Ruth. Stuzin got his federal charter in 1952, setting up shop in Hialeah. "At that time, building was beginning to boom," recalls Ruth Stuzin. "He always said, 'Don't forget the purpose of the business: home loans.'"

The family still owns 44 percent of the company.

The younger Stuzin was interested in the business. Dad decided he should learn it from the ground floor. "I started when I was 15 as a teller," says Charles Stuzin. "I worked in every department. That's how I learned the basics."

An accounting degree from the University of Florida polished his numbers knowledge. A law degree, with a specialty in real estate, gave him insight into home lending.

DEREGULATION STRATEGIES

But nothing could have prepared him for the thrift industry crisis of the mid-1980s, Stuzin says. In the early 1980s, market conditions forced S&Ls to pay high interest rates on deposits while they earned low yields on fixed-rate mortgages. Losses ensued.

Citizens survived, but a fourth of Florida's S&Ls didn't.

In the mid-1980s, empowered by deregulation, many S&Ls voluntarily bid up rates on deposits because they could now pump the deposit money into high-interest commercial loans rather than mortgages.

The problem: High-interest loans are made to less creditworthy customers.

Citizens saw disaster looming. "The industry was paying too much for deposits," Stuzin said. "That means you've got to get higher rates on your loans to earn a profit. And that means you have to make riskier loans."

The dilemma: Citizens couldn't afford to bid for deposits, but it couldn't afford not to. No thrift can survive without new deposits.

A SHIFT TO INVESTORS

With regulators' blessings, Stuzin found a solution. Rather than take money in from consumers, he turned to investors. He sold notes and short-term commercial paper backed by letters of credit from the Federal Home Loan Bank of Atlanta. Safety-seeking investors snapped up $400 million worth.

"We were the first in the Southeast to do these things," says Stuzin. "It kept our cost of funds normal."

If Citizens bent tradition on the deposit side, it stuck to tradition on loans. All across South Florida, S&Ls were entering wild arrays of new businesses—and many posted more glamorous earnings than Citizens, at least initially.

Citizens quietly swam against the tide, pumping 90 percent of its assets into the home mortgage business. Tradition won out. Citizens earned $63 million in the last five years. Many high-fliers failed or dipped dangerously into red ink.

"WHAT WE KNEW BEST"

In retrospect, Stuzin says remaining a mortgage lender wasn't an easy decision. The pinch of the early 1980s proved that no business—even home loans—is immune to economic pressures.

Yet, embarking on risky new ventures made little sense. Citizens could seek solutions in home lending—a business it knew—or face the dangers of unknown ventures.

"We decided to stick to what we knew best—home lending and consumer lending," he said. "The ones that took the risks—look what happened. We consciously stayed more conservative."

Citizens did some retooling, though. Today, more than half its mortgages are adjustable, meaning they go up and down with market rates. Also, rather than strictly hold mortgages, Citizens also invested heavily in mortgage-backed securities.

J. Dan Brock, a prominent Florida businessman who retired from Citizens' board in 1988, says time proved Citizens right. Citizens "consistently made money, and Charlie deserves most of the credit," Brock says. "The name of the game isn't to see how big you can get and how much money you can lose."

EXPANDING WEST

Has Stuzin, perhaps, taken too few risks? He pauses. "We have taken risks. We've expanded."

With expansion, Citizens once again went against popular fads. Thrifts in Florida were expanding aggressively on their booming home turf. S&Ls from around the country paid premiums to establish Florida beachheads.

Citizens skipped the competitive fray and took the road less traveled—to central Ohio, southern Illinois and Richmond, VA. It also went to California. But it snubbed the metropolitan areas for tiny Guerneville.

The deals were federally assisted. That means Citizens got cash from the government for taking over a sick institution. The government also sometimes kept the bad assets.

"Based on the strategy we had, Ohio and Illinois were the two greatest things we could have done," Stuzin says. The Midwest economy revived. Today, it is one of the nation's strongest housing markets.

In addition, Midwesterners are loyal customers, less likely to bankhop in search of higher rates on deposits.

THE POST-BAILOUT WORLD

Getting into the new states positions Citizens for the post-bailout world, says Erwin Katz, president of Tampa's Williams Securities.

"They are going to be a survivor," Katz predicts. "In effect, they have national market presence."

Regulators know they can deal with Citizens, Katz says, which will be an important plus when hundreds of insolvent S&Ls are sold. Also, banks scouting for acquisitions will look favorably on an institution with a five-state franchise, Katz says.

To be sure, there have been some disappointments. Like Virginia. Many troubled S&Ls there have bid up rates on deposits to raise cash.

More significantly, Citizens assumed $35 million in undeclared losses, also known as goodwill, from the acquired institutions. In the past, that didn't hurt. Regulators allowed goodwill to be counted as capital, and the goodwill could be written off over 20 years.

In effect, taking over sick thrifts strengthened your balance sheet.

That changed last summer. The Financial Institutions Reform Recovery and Enforcement Act, also known as the bailout bill, sharply restricted goodwill's use as capital. It will be eliminated entirely by 1994.

STUZIN'S COMPLAINT

Stuzin is clearly rankled even though Citizens meets capital standards without goodwill. To him, changing the rules on goodwill is a broken government promise.

"I found it very perverse," he says. "Where was it ever demonstrated that the industry's problems were caused by healthy thrifts taking over unhealthy ones?"

If there is a broad dilemma facing Citizens, it is this: What saved it in the past may kill it in the future. Citizens soared as a traditional S&L, but many forecast extinction even for healthy home-lending specialists. Banks and mortgage loan companies already have half the market. Deregulation and the high bailout costs have ignited debate on the need for a separate S&L industry.

"They have no purpose," says Hugh McColl, chairman on banking giant NCNB.

Perhaps. But William O'Connell, former powerful head of the U.S. League of Savings Institutions, disagrees. S&Ls have a meaningful purpose for the future, he says. It is the purpose that so helped Citizens in the past—providing home loans.

"THE UNIFIER"

In an assessment that perhaps explains Citizens' success, O'Connell says Stuzin's mix of new approaches with time-proven traditions made his input highly valued by league members.

So far as O'Connell could tell, Stuzin made no enemies despite some occasionally rancorous debate on various committees. "Charlie was basically a unifier—he tried to balance things between the various factions," O'Connell says. "I always counted on him for that."

GOVERNMENT PRINTING OFFICE IMPROVEMENT ACT OF 1990

HON. JIM BATES

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 23, 1990

Mr. BATES. Mr. Speaker, today I am introducing legislation designed to amend and update title 44, the U.S. Printing Code. The Government Printing Office Improvement Act of 1990 would provide for the utilization of electronic information technologies in the fulfillment of the Government's information functions and reduce expenditures by promoting greater efficiency in Government printing.

Last year, a report issued by the Office of Technology Assessment warned that "congressional action is urgently needed to resolve Federal electronic information issues." The printing laws defined in title 44 predate electronic information. Therefore, it is currently impossible to ensure that electronic information is finding its way into the hands of the public, where it properly belongs. The legislation I am proposing will ensure that electronic information is made available to the American public through the Federal Depository Library Program.

Hearings held by the Subcommittee on Procurement and Printing last year revealed that a great deal of Government information produced by Federal agencies is printed in a highly decentralized environment at a very inflated cost. This legislation proposes to strengthen the centralization of in-house printing and printing procurement by the Government Printing Office.

Therefore, the Government Printing Office Improvement Act of 1990 will reform the public information functions of the Government Printing Office and will provide for higher efficiency and cost effectiveness to the Federal Government.

EDUCATION: AMERICA'S NATIONAL CHALLENGE

HON. ILEANA ROS-LEHTINEN

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 23, 1990

Ms. ROS-LEHTINEN. Mr. Speaker, the Cuban American National Council [CNC] will hold its 5th National Conference titled "Education: America's National Challenge" at the Hyatt Regency Hotel, downtown Miami, FL, from January 24 through January 26, 1990.

The conference workshops will highlight four major topics frequently addressed in debates on education. The first workshop attempts to frame the educational goals and expectations of key decision makers for the 21st century.

The second workshop focuses on the status of millions of students who systematically fail to keep up with their peers, due to special, economic, and cultural factors.

The conference's third workshop will address corporate America's growing concern with education and basic skills of its future labor force.

The last workshop addresses the educator's ongoing search for curricula that meets our students' basic needs, and whether the best possible courses can be effective, if students are not driven by commonly accepted social values.

Mr. Speaker, I would like to thank the Cuban-American National Council and its president, Mr. Guarione Diaz, for the timeliness of this conference, as a national consensus is growing to place education among our country's top priorities. Together, we can meet this challenge and ensure a good education for our children.

TRIBUTE TO URBAN MISSION OF STEUBENVILLE

HON. DOUGLAS APPLEGATE

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 23, 1990

Mr. APPLEGATE. Mr. Speaker, I rise today to pay tribute to the Urban Mission of Steubenville, for 30 years of dedicated service to the needy of Jefferson County, OH. The anniversary is being recognized at the Urban Mission's annual dinner on January 27, 1990.

The Urban Mission can trace its beginnings to the Millmen's Hostel and its only Director, Rev. Robert Henthorn (Rev. "Bob"). This organization served as an outreach to workers of the Steubenville plant of the Wheeling-Pittsburgh Steel Co. From 1959 to 1973 the Millmen's Hostel offered a four-fold ministry consisting of religious services, pastoral counseling to workers and their families, recreation, and refreshments. Reverend Henthorn traveled throughout the Ohio area lecturing on subjects concerning industrial relations in the context of the Christian gospel.

The Millmen's Hostel had to be closed when Wheeling-Pitt decided to expand their parking facilities and to raze the Hostel building. In order to continue such a ministry in the area of labor-management relations, Reverend Henthorn was appointed to the staff of Boardman United Methodist Church.

The Urban Mission Ministry, created from the philosophy of the hostel, was the result of a study conducted by an Urban Strategy Committee appointed by Rev. Avery Bulter. Rev. Fred Gaston was made Urban Minister in 1973 with the mandate to explore places and situations where a Christian presence and ministry seemed viable. In 1973, the board of directors approved the following areas of ministry: The Street Ministry, Lincoln Ave., Youth Center, Jail Ministry, Emergency Aid to Families, and a Christian Nursery School. The first nursery school class was held on December 3, 1973, and has operated there ever since. The Youth Center was dedicated in June 1974, and shortly thereafter, the day and resident camping program began. A Market Place Ministry was started at the Fort Steuben Mall in December. In 1979, a Tri-County Criminal Seminar became the starting point for a wider volunteer criminal justice ministry.

Rev. Robert Hutton succeeded Rev. Gaston upon his retirement in 1981. Rev. Hutton served until his death in 1987. Under his directorship, The Aid to Families and the Homeless was expanded and a Vietnam Veterans Outreach started.

On December 7, 1986, Bishop James Thomas hosted the dedication ceremony of the newly acquired headquarters of the Urban Mission Ministry. The expanded facility allowed the staff to more completely fulfill its motto. "To listen with compassion and serve with love." The present director, Rev. Roger Skelly-Watts was appointed in April 1988. He and his staff have enlarged the Ministry to the Homeless through a new project called the Hutton House, which provides temporary shelter for families until a permanent residence can be located. The contemporary Urban Mission Ministry is a fitting memorial to Reverend "Bob."

Mr. Speaker, it is my distinct privilege and honor to ask my colleagues to join with me in acclamation of both the Millmen's Hostel and the Urban Mission Ministry for the services they have provided over the last 30 years to the community of Steubenville.

HONORING LOUIS C. HOYT

HON. MEL LEVINE

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 23, 1990

Mr. LEVINE of California. Mr. Speaker, I would like to recognize Mr. Louis C. Hoyt who will be honored by the law firm of Katz, Hoyt, Seigel & Kapor upon his retirement from the practice of law. At age 84, Mr. Hoyt's retirement comes after a long and exemplary legal career which began in New York, 1931.

Louis is a senior member of the firm and has been a partner in its predecessor firms. He received his LL.B degree, cum laude, from St. John's University in 1930 and was admitted to the Bar of the State of New York in 1931. Of the six thousand applicants to the New York Bar in 1930, Louis scored among the top 8 candidates on the bar examination.

In 1939, Louis joined the claims department of the Prudential Insurance Co. at its original home office in Newark, NJ and when it opened its western head office in Los Angeles, CA, he transferred to that location.

Louis was admitted to the California Bar in 1959 and returned to private practice at that time. In his many years of practice, he has received substantial recognition and numerous accolades as a California trial and appellate attorney.

Louis is admitted to the U.S. district courts within the States of California and New York, the Court of Appeals for the Ninth Circuit, and the U.S. Supreme Court. He is a member of the Los Angeles County Bar Association as well the bars of the States of New York and California. Although presently semiretired, Louis continues to devote the majority of his working days to complex civil litigation and appellate matters. His background and experience include expertise in matters related to all areas of insurance and commercial arbitration proceedings. He is an associate of the Life Office Management Associates, having received the third highest mark in the United States and Canada in that association's examination regarding insurance mathematics.

Mr. Speaker, I ask my colleagues to join me in paying tribute to Louis Hoyt for his outstanding contributions to the legal profession.

TRIBUTE TO JOHN J. PARTINGTON

HON. RONALD K. MACHTLEY

OF RHODE ISLAND

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 23, 1990

Mr. MACHTLEY. Mr. Speaker, I rise today to pay tribute to John J. Partington for his 8 years of service as chief of police in the town of Cumberland. He will be honored for his service on January 26, 1990.

Mr. Partington began his career in law enforcement more than three decades ago in his hometown of Cumberland as a patrolman. In 1962, Mr. Partington became a deputy U.S. marshal and served in the Justice Department for 20 years. During his service in the Justice Department, Mr. Partington was commended over 75 times for his outstanding service. In 1975, Mr. Partington received the "Federal Employee of the Year Award."

In 1982, Mr. Partington returned to Cumberland to serve as chief of police. During his service in Cumberland, Mr. Partington strived to open communications between the community and the police force. Mr. Partington has created many programs for the youth, the elderly, and the entire community of Cumberland which have helped make Cumberland a safer place to live. Mr. Partington has also been recognized for his outstanding public safety record by being named public safety commissioner in Providence.

I would like to thank Mr. Partington for his years of service to the town of Cumberland. His dedication and excellence are a tribute to his concern for others. I hope that others will follow Mr. Partington's example and always ask what they can do to help protect others.

TEENAGERS, CARS, AND DRUG ABUSE

HON. RICHARD K. ARMEY

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 23, 1990

Mr. ARMEY. Mr. Speaker, every day there are new statistics graphically showing the toll that drugs are taking on this society. In terms of human life, lost productivity, growing violence, and the sheer numbers of people involved, no one can deny that we have a national crisis on our hands. This crisis will only be solved if the demand for drugs can be reduced.

Interdiction, education, and treatment are all effective tools in stemming the flow of drugs, but we also have to focus on prevention and deterrence. America's jails are overflowing and the court system is struggling to keep up with the constant influx of new cases. Jail is not always the answer, particularly in the case of young and first-time offenders. We need new and innovative solutions—we need to make a strong impact on the youth of this Nation.

That is why I am offering this resolution today urging the States to adopt laws which would take away the drivers license of any minor convicted of a drug-related offense. We all know how anxious our teenagers are to get their hands on the car keys—taking away that privilege may provide that extra incentive to stay away from drugs. This is one solution that can be tailored to fit the needs of each State, and it is one idea that may make a difference. It is the individual steps and small victories that will ultimately tip the balance against drugs. This resolution may make a difference in one teenager's life, and I would consider that a victory.

COUNTDOWN TO EARTH DAY

HON. MORRIS K. UDALL

OF ARIZONA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 23, 1990

Mr. UDALL. Mr. Speaker, the story is told of the Brooklyn Dodgers baseball team in a particularly bad slump. Each year, at the end of another losing season, the fellow who kept the scoreboard in the outfield would put up a large banner that read, "Wait till next year!" After a few bad years, the Dodgers won the pennant and the fellow in the outfield put up a banner that read, "This is next year." Well, I'm here to tell you that for the environmental movement, this is next year.

Well, it's been 20 years since Earth Day and we are starting the 2d session of the 101st Congress. We have a healthy agenda, and there aren't going to be a whole lot of surprises on the environmental front and we'll probably have to make some compromises.

Mr. Speaker, Earth Day 1990 is being organized to celebrate past environmental victories and to show renewed commitment to finding solutions to the environmental problems we face today.

We have a great need to educate our citizens about growing environmental problems. Depletion of the stratospheric ozone layer; erosion of rain forests, wetlands, and other wildlife habitats; air and water pollution and the storage of radioactive and other hazardous wastes are problems which require solutions.

Mr. Speaker, the most effective environmental policies come from an educated public. Earth Day is an important part of any educational effort. We must become environmentally responsible consumers who conserve energy, increase recycling efforts, and promote environmental responsibility in our communities.

JOHN M. HOBEN NAMED SUPERINTENDENT OF THE YEAR

HON. CARL D. PURSELL

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 23, 1990

Mr. PURSELL. Mr. Speaker, it is indeed a pleasure that I bring to your attention today an honor bestowed upon my friend and constituent, Dr. John Michael Hoben, superintendent of schools in Plymouth, MI. Dr. Hoben has been named the 1990 Superintendent of the Year by the Michigan Association of School Administrators.

For the past 34 years, Dr. Hoben has exhibited how he truly believes in public education, and has actively worked to meet educational challenges and to maximize educational opportunities.

Born in Adrian, MI, Mike began his career as a teacher in Cheboygan, MI, in 1949. In 1955, he moved to our community of Plymouth and has progressively worked his way through the ranks from teacher to counselor to principal to assistant superintendent to superintendent of schools. He has held that post for 19 years.

Prior to beginning his career in education, Mike served two tours of duty in the U.S. Marines, first in the South Pacific, and then in Korea. A widower, he is the proud father of a son, John, and a daughter, Michelle.

His professional and community service accomplishments are numerous. Such service has included the United Fund, Rotary Club, YMCA, and many professional associations and boards.

I salute Dr. John M. Hoben on his memorable career, and congratulate him on becoming Michigan's Superintendent of the Year for 1990.

THE 50TH WEDDING ANNIVERSARY OF MR. AND MRS. JOSEPH MATULA

HON. WILLIAM O. LIPINSKI

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 23, 1990

Mr. LIPINSKI. Mr. Speaker, it gives me great pleasure to bring to the attention of my colleagues an exemplary couple from the Fifth Congressional District of Illinois, Joseph and Theresa Matula, on the occasion of their 50th wedding anniversary back in August 1989. They were married at St. Richard's Church by Father Quinn on August 27, 1939, and are a role model of the family strength and solidity which has made America great.

They are both active members of the A.A.R.P. and have lived on the southwest side of Chicago their whole lives. In addition to their 6 children, they are proud of their 12 wonderful grandchildren.

Their commitment to each other and their family is impressive and deserving of special recognition and honor. I am sure that my colleagues join me in congratulating Mr. Joseph Matula and his bride of 50 years, Theresa, on their many years of love and commitment. May their life together continue to be an adventure and offer them many more pleasant memories.

TRIBUTE TO EARL SIEGMAN

HON. JIM SAXTON

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 23, 1990

Mr. SAXTON. Mr. Speaker, my colleagues and I often take this time to pay tribute to some of the great citizens of this country who have served their communities in extraordinary ways. Today, I rise once again to ask my colleagues to join me in paying tribute to Mr. Earl Siegman, a constituent of mine who is being honored for over 30 years of service to the great State of New Jersey.

Earl Siegman has held many important positions in the State and local fire service. During the past 15 years, Earl has served in almost every line officer capacity, including fire chief. He has been an active force as a member of the Evesham Board of Fire Commissioners in Evesham, NJ. This board is the guiding force for all of the fire and emergency medical services within Evesham Township.

Among Earl's many positions in the township, his tenure as treasurer of the district stands as one of the best examples of his abilities and dedication. Through his leadership, the district has developed a highly efficient electronic accounting system, a continuing 5-year capital planning program and assisted in setting up the funding program for the recently incorporated emergency medical services division.

Earl Siegman's civic responsibilities extend beyond his time spent with the emergency services. He also serves full time on a local school board and is active with the South Jersey Development Council.

Mr. Speaker, I know my colleagues join with me and the rest of the citizens of the great State of New Jersey in recognizing Earl Siegman and thanking him for his many years of service.

TRIBUTE TO VELMA M. SLACK

HON. DAN SCHAEFER

OF COLORADO

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 23, 1990

Mr. SCHAEFER. Mr. Speaker, today I rise to pay tribute to a dedicated public servant who is retiring after 35 years with the Federal Government; 33 of them with the Social Security Administration.

Velma, who began her career as a claims development clerk in San Antonio, TX, continued her advancement as a claims representative; then becoming an operations supervisor.

Velma's dedication to the Social Security Administration led to the formation of the first data review unit and training the first data review technicians in the San Francisco region. As a senior staff officer in the Denver Regional Office, she succeeded in getting the offices upgraded. In 1981 Velma was promoted to executive analyst and in 1984 she became the District Manager. In 1986 Velma received the Regional Director's Citation for her excellent work with the Social Security Administration and in 1989, Velma received the Innovative Manager of the Year Award for advancement in automation, productivity, and service to the public.

I would like to commend Velma M. Slack for the years of dedication and hard work in her quest for innovations and improvements in the Social Security Administration. She exemplifies what a dedicated public servant can be and I applaud her and thank her for the 35 years she has given to our Federal Government.

KIWANIS INTERNATIONAL ANNIVERSARY

HON. C. THOMAS McMILLEN

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 23, 1990

Mr. McMILLEN of Maryland. Mr. Speaker, I rise today to commend Kiwanis International on its 75th anniversary and to congratulate the local clubs of Anne Arundel and Prince

Georges Counties on years of outstanding community service.

Seventy-five years ago this month Kiwanis was established in Detroit, MI, and a rich tradition of compassion and generosity began. Over the years the organization has grown to 320,000 members in more than 8,500 clubs in 74 nations. Its name has been associated with everything from promoting democracy worldwide to fighting the drug problem here in America's schools. And I'm proud to say I'm a member of the Kiwanis Club of Crofton, MD.

In recent years, the organization has emphasized the serious problem of drug and alcohol abuse among our young people. Yesterday, Kiwanis International launched Operation KNOW in a dozen cities nationwide to educate the children of America to the dangers of substance abuse. Operation KNOW includes sing-alongs, informational games, skits, and special events to get children involved.

Locally, Maryland Kiwanis clubs have used their own funds and a grant from the State of Maryland to sponsor a number of innovative programs aimed at the drug problem. Among them have been several "Just Say No" days and "Positive Peer Scene Theatre," a group of high school youngsters who present powerful improvisational theater performances about adolescent problems to school assemblies, civic and community service organizations, and others.

Mr. Speaker, people have said the spirit of voluntarism is dying in America, but I know a place in every community where it is alive and well: it is in the local chapter of the Kiwanis International, and I'm proud to come before you today to salute this fine organization and its members.

SENATE—*Wednesday, January 24, 1990*

(Legislative day of Tuesday, January 23, 1990)

The Senate met at 9:30 a.m., on the expiration of the recess, and was called to order by the President pro tempore [Mr. BYRD].

The PRESIDENT pro tempore. The Senate will come to order. Today's prayer will be offered by our guest chaplain, the Reverend Dr. Paul M. Youngdahl, pastor of the Mount Olivet Lutheran Church, which is the largest Lutheran Church in the United States, in Minneapolis, MN.

Dr. Youngdahl.

PRAYER

The Reverend Dr. Paul M. Youngdahl, pastor, Mount Olivet Lutheran Church, Minneapolis, MN, offered the following prayer:

Let us pray:

Gracious God, we know that You are present in Your world and that our lives should be grounded in You. We live in a time of rapid and exciting change, so we need Your guidance each day.

Often we have lived only for ourselves, denying life to others by our self-centeredness. For sins of commission and omission we seek Your forgiveness, dear God. Give us gentle hearts that we might not add to the world's sorrow. Give us loving hearts that we might share our wealth and abundance with the world.

Grant health and favor to all who bear office in our land, especially the President, the Senate, the House of Representatives, the courts, and all in authority. As they govern, give them the freedom to be Your servants and servants of Your children.

Faithful Lord, we pray today a special blessing on Your servant, Chaplain Halverson. We are grateful for his meaningful, loving and dignified ministry here in our Capitol. Bless him with continued good health, wisdom, and courage.

We pray for peace, for peace within ourselves and for Your world. Teach us to walk in the ways of peace and to learn the lessons of love.

God, hear us as we pray together the prayer that I learned and loved in my childhood: "Dear Lord, of Thee three things I pray: To see Thee more clearly, to love Thee more dearly, and to follow Thee more nearly, day by day. In Your name we pray. Amen."

RECOGNITION OF THE MAJORITY LEADER

The PRESIDENT pro tempore. The Senate will be in order.

The majority leader is recognized.

THE JOURNAL

Mr. MITCHELL. Mr. President, I ask unanimous consent that the Journal of the proceedings be approved to date.

The PRESIDENT pro tempore. Without objection, it is so ordered.

SCHEDULE

Mr. MITCHELL. Mr. President, this morning following the time reserved for the two leaders there will be a period for morning business until 10 a.m., with Senators permitted to speak therein for up to 5 minutes each. At 10 a.m. the Senate will resume consideration of the clean air bill, S. 1630.

I know that there are a number of Members who have expressed an interest in addressing the clean air bill. I encourage them to come to the floor today. Today has been reserved for debate, questions, and comments on the clean air bill.

Regarding the veto message on the Chinese students status bill, that is H.R. 2712, the House is slated to vote to override it today. When that message is received in the Senate it will be considered under the provisions of the unanimous-consent agreement reached yesterday. The agreement provides for a time limitation of 4 hours of debate to be equally divided and controlled between Senators KENNEDY and SIMPSON, or their designees, with a vote occurring on the expiration or yielding back of time.

Mr. President, as both Senator DOLE and I indicated last night, we now anticipate that the debate on the Chinese students bill will occur tomorrow morning and early tomorrow afternoon with the vote coming sometime during the afternoon. I will, I hope shortly, after consultation with the distinguished Republican leader, announce the precise time on the vote.

We wanted to make the announcement last evening to give Senators the opportunity to return to Washington to be present for the vote in the cases where Senators are not currently here. We understand that there are several Senators who are not present, who are traveling in their States engaged in political and other campaigns, and while, of course, all of those are important, the primary business of any Senator is here in the Senate Chamber and particularly when an important vote is to occur such as this very important veto override vote.

So Senators—and I hope those who are not present—will be notified by their offices immediately and should be aware that an important vote will occur tomorrow, and that it is imperative that those Senators not present today return for that. The very reason for announcing this in advance is to give every Senator the opportunity to return to fulfill his or her obligations as Senators on this important measure. We look forward, of course, to the presence of all Senators for this very important vote.

RESERVATION OF LEADER TIME

Mr. MITCHELL. Mr. President, I reserve the remainder of my leader time, and I reserve all of the leader time of the distinguished Republican leader.

The PRESIDENT pro tempore. Without objection, the time of both leaders is reserved.

MORNING BUSINESS

The PRESIDENT pro tempore. Under the order, the Senate will now proceed to a period for morning business until 10 o'clock a.m., with Senators being permitted therein to speak for up to 5 minutes each.

THE 1989 YEAR END REPORT

The mailing and filing of the 1989 Year End Report required by the Federal Election Campaign Act, as amended, is Wednesday, January 31, 1990. Principal campaign committees supporting Senate candidates file their reports with the Senate Office of Public Records, 232 Hart Building, Washington, DC 20510-7116.

The Public Records Office will be open from 8 a.m. to 9 p.m. on the filing date to accept these filings. In general, reports will be available to the public 24 hours after receipt. For further information, please contact the Public Records Office on (202) 224-0322.

NOTICE CONCERNING ANNUAL REGISTRATIONS OF MASS MAILINGS

In view of the approaching February 1 filing date, Senators should be reminded of the requirements concerning registrations of mass mailings under Senate rule 40.

Members are required to register annually such mailings. The 1989 calendar year filings will be due on February 1, 1990. Mass mailing registrations are also accepted on an "as mailed" basis if Members so desire.

For your information, following are excerpts from rule 40:

* * * 3. (a) When a Senator disseminates information under the frank, by a mass mailing (as defined in Section 3210(a)(6)(E) of Title 39, United States Code), the Senator shall register annually with the Secretary of the Senate such mass mailings. Such registration shall be made by filing with the Secretary a copy of the matter mailed and providing on a form supplied by the Secretary, a description of the group or groups of persons to whom the mass mailing was mailed.

(b) the Secretary of the Senate shall promptly make available for public inspection and copying a copy of the matter mailed and a description of the group or groups of persons to whom the mass mailing was mailed * * *.

The Senate Office of Public Records will be open from 8 a.m. to 6 p.m. on the filing date for the purpose of accepting these filings.

For further information, please do not hesitate to contact the Public Records Office on (202) 224-0322.

Mr. MITCHELL. Mr. President, I suggest the absence of a quorum.

The PRESIDENT pro tempore. The absence of a quorum has been suggested. The clerk will call the roll.

The bill clerk proceeded to call the roll.

Mr. REID. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDENT pro tempore. Without objection, it is so ordered.

The Senator from Nevada [Mr. REID], is recognized for not to exceed 5 minutes.

CAMPAIGN REFORM

Mr. REID. Three years ago exactly I appeared in this Chamber and spoke at that time about the race that I had just been involved in. It was a hotly-contested contest and one not conducted in the way that the American public thinks campaigns should be conducted. As a result of that race, a number of complaints were filed with the Federal Election Commission on my behalf, seven in number. Some of those complaints were filed almost 4 years ago. To this day they have not been resolved.

The first thing that you would think we would do is complain and rail against the Federal Election Commission. But I did not do that 3 years ago and I am not going to do it today. Why? Because we, here in Congress, have not given the Federal Election Commission the power to be anything more than a toothless tiger.

I said 3 years ago that I thought there were certain reforms that should be made. Never in my wildest dreams did I think I would be more than halfway through my term and not a single reform executed. We have another set of elections coming up in less than a year, and those elections will be conducted in the very same way that my race was conducted 3 years ago. Why? Because there are no constraints. Everyone knows the limit of things that have been done, and the majority leader of the Senate, during the 100th Congress, led a fight to change the campaign spending laws. Senator BYRD of West Virginia, in fact, led that fight to the extent that it holds the record for the most times attempting to invoke cloture on a bill. It was never done. Numerous times this body attempted to invoke cloture so we would get to the merits of the bill. There was a filibuster that prevented us from doing so.

We now hear people standing and saying there must be campaign reform, but we are in the same morass we were in 2 years ago, because one side is saying we must have spending limits. The other side is saying we must have PAC reform.

What I am saying is that there are certain things that can be done. For example, take the Federal Election Commission that has not responded to six complaints filed on my behalf in an election over 3 years ago. Senator MCCONNELL and this Senator introduced a bill last year that would set some minimal standards and streamline FEC procedures. We would not get into spending limits. We would not get into limitations regarding PACs, but we agreed on certain measures in a bipartisan fashion.

For example, the Federal Election Commission should have injunctive relief. Under certain conditions, the Federal Election Commission should be able to issue an injunction. Candidates and parties have the right to sue, and they should not be forced to sue in the District of Columbia. They should be able to sue, for example, in their own congressional district or in their own State. They should not have to come to the District of Columbia to attempt to assert their legal claims.

We should also have increased penalties. The penalties now are so minimal that many people violate them with impunity. That is wrong.

We should do something about the millionaire loophole. If someone is going to spend more than $25,000 of their own money, certain measures in our bill would kick in and would eliminate millionaires from being able to have an unfair advantage in a Senate race.

We also agreed in that legislation that bundling practices should be changed. I have talked about a few things that should be done. It is my earnest wish that this Congress, this year, will do something about campaign spending, so that the 1990 elections, and certainly the 1992 elections, will be guided by rules, rules that the American people think are fair and the candidates can approach, giving the American public what they really deserve. That is, a fair, concise election.

The PRESIDENT pro tempore. The time of the Senator from Nevada has expired.

Mr. BENTSEN addressed the Chair.

The PRESIDENT pro tempore. The senior Senator from Texas [Mr. BENTSEN] is recognized for not to exceed 5 minutes.

TOP MEDIA EVENTS OF 1989

Mr. BENTSEN. Mr. President, of all the images provided for us by journalists last year, two stand out for me: First, the peaceful protestors demonstrating for democracy in Czechoslovakia and East Germany, holding candles as they marched in the autumn night; the other, that solitary man in China, standing bravely in front of a tank in Tiananmen Square.

It is a stunning surprise that candlepower could jolt entrenched leaders from power with virtually no bloodshed.

Ultimately, though, the man in China moved aside. China responded to the pleas for democracy by its people by launching a brutal, bloody repression.

Thus far, the United States has responded favorably and generously to the earth-shaking changes in Eastern Europe. I believe that we can and should do more to help democracy take root and flourish in that region.

In China, however, the administration is disregarding the strongly held views of the Congress and the American people for a tougher response to Chinese leaders and for better treatment of Chinese students in this country.

Administration policy since June 4 has been deeply flawed. Our official Government reaction was strong in words but quite limited in deeds.

The administration totally undermined its announced suspension of high-level contacts with the two Scowcroft missions to Beijing. It misled the American people by concealing the first Scowcroft trip until it became undeniable.

I do not know whether there is a Chinese proverb to cover this situation. But our own belief in judging deeds not words means that we, too rapidly, were willing to overlook China's crackdown. Our Government was more interested in Chinese democracy.

The administration argues that we must not leave China isolated. I agree. That's why Congress did not vote sanctions which would have broken off relations or ended trade. We recog-

nize the importance of using the leverage we have to push for the kinds of positive changes which had been occurring prior to June 4.

Nor would legal protection for Chinese students have led to further isolation of China. If that were true, it should have occurred when the administration announced its own changes in immigration policy.

The fact is, though, that so far, our China policy has been a one-way street of American concessions to Chinese intransigence. How has China improved its treatment of its people since the veto and since the Scowcroft Mission? Fang Lizhi and his wife are still in asylum in our Embassy. Martial law has been lifted in Beijing, but dissent is still not allowed. There even has been significant recentralization of economic policy.

And the repression of the people continues. Just last week, January 17, the Washington Post reported that more than 800 Chinese have been convicted and sentenced to prison terms in recent months for so-called counterrevolutionary crimes. While mass arrests are no longer continuing, the Post said, reliable Chinese sources say that individual arrests continue. And there is no end in sight.

Under these circumstances, Mr. President, the least we can do is to give some protection to the Chinese students who remain in our midst, whether there are 40,000 of them as one estimate would have it, or the 73,000 contained in another.

For that reason I oppose the President's veto of the Emergency Chinese Immigration Relief Act. I will vote to override it. This measure passed Congress with virtually no opposition because it provided much-needed assurances that Chinese students in America would not be forced to return to the oppressive conditions in their native land.

While the administration claims that its actions provide sufficient guarantees for students, its policy has made their position more precarious.

Instead of the certainty of statute law, they have only a temporary change in administrative guidance. The President did not even issue an executive order to carry out his plan.

The administration's promises could vanish overnight, with the stroke of a pen. After all, its own National Security Adviser toasted Chinese leaders just last month by criticizing negative voices in both countries who seek to redirect or frustrate our cooperation.

Who have been the most vocal critics of our business-as-almost-usual policy following the bloodshed in Tiananmen Square? The students, we know it. They know it, too. How secure can that make them feel?

The Chinese students are in worse shape than people with a month-to-month lease from a cranky landlord. They could be evicted at any second. They are at the mercy of Sino-American diplomacy, which seems to be more concerned with friendly gestures than substantive changes.

I think we can do better by them. Many of these young people were the vanguard of hope for a new China, one open to Western ideas and values as never before.

These students came here to learn, but were as distracted as any of us by the pro-democracy demonstrations across China last spring. Fax machines worked overtime between China and America, sharing information and broadening understanding.

We should offer them safe haven, just as we earlier offered them a chance for the best possible education. We can benefit from their presence here, whether for a short time or a long one. We can use their intelligence, their commitment to democracy, their devotion to learning. Their presence among us can make our country at least a little bit better for all of us.

They were the best and the brightest in their homeland; that is why they were sent here to study. Now we have a chance to keep their candles burning until freedom comes to Tienanmen Square.

The PRESIDENT pro tempore. The time of the Senator from Texas has expired.

Mr. BENTSEN. Mr. President, I suggest the absence of a quorum.

The PRESIDENT pro tempore. The point of no quorum having been raised the clerk will call the roll.

The bill clerk proceeded to call the roll.

Mr. DOLE. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDENT pro tempore. Without objection, it is so ordered.

RECOGNITION OF THE REPUBLICAN LEADER

The PRESIDENT pro tempore. The Republican leader's time was reserved, and he is now recognized.

FOREIGN AID: NEW DEMANDS DEMAND REALLOCATION

Mr. DOLE. Mr. President, This week, we start a new session; and in some important ways, we face a new world.

In places from Panama to Poland, long oppressed people continue to take giant strides toward democracy and free markets. You get the feeling that the folks at State Department, trying to keep track of events in Eastern Europe, have to write the names of the heads of government on a magic slate—in order to keep up. It is changing that fast.

It is a very dynamic, in some ways volatile, situation. And, no doubt about it, some prudence is in order.

GOOD NEWS: FREEDOM EPIDEMIC

But this much is already clear. We have a responsibility, and a terrific opportunity, to help advance the cause of freedom, and at the same time advance critical American national security interests. If the great experiments in democracy and free markets succeed, freedom will continue to advance; and it can mean, for the United States, greater security, lower defense spending, and great new markets for our products and ingenuity.

That is the good news.

The bad news is—while in some ways it is a new world out there, in other ways we still face some old realities.

BAD NEWS: FEDERAL DEFICIT

We have almost incomprehensible Federal deficits. We have put some flimsy wallpaper over the yawning gap between what we take in and what we spend; but we have not really come to grips with the deficit crisis.

And it is going to get worse—much worse—in the next couple of years. Overall, we are just not going to have large amounts of new money to pour into foreign aid. That is a fact.

Down the road, if a substantial peace dividend does materialize, I hope we will use it primarily to reduce the deficit. One other important priority that could be addressed would be foreign aid. But, as I say, that is some years down the road.

The hard reality is: for this year, fiscal year 1990, and for next, fiscal year 1991, we are going to be operating with pretty much the same pot of money, to meet our increasing bilateral foreign aid requirements.

And let me stress this point: I have spoken so far about new opportunities and responsibilities. We also have a host of extremely important longstanding and on-going responsibilities—allies and friends, whose own fate and policies will have a great impact on our security and well-being.

LATIN AMERICA—NO MORE COLD SHOULDER

Right now, we just do not have enough money to go around, to meet all of their legitimate requests. We do not have enough money to take advantage of every opportunity to help ourselves—our security and economic well-being—through timely help to them.

I want to make it very clear at this point I am not talking about just handing people money. Obviously investments and making certain that they are preparing for market economies in these emerging democracies are going to be very important and probably should be the precedents for any aid. Talk about foreign aid, the economic aid.

Over the recess, I visited five nations in Latin America—Bolivia, Argentina,

Paraguay, Venezuela, and Trinidad. At every stop, we heard the same legitimate lament: Already seeing themselves as far down the totem pole in terms of United States interest and aid, they see events in Eastern Europe pushing them even further down. And the news is even worse than that. Not only do we have a big, big deficit problem. Not only do we have an aid budget stretched tight as a drum, and many new foreign aid responsibilities.

EARMARKING STATS

We here in Congress have compounded all these problems with massive earmarking—legislating very high levels of aid for certain countries, and thereby taking up front a very high percentage of our foreign aid budget.

Some statistics tell the tale—92 percent of the foreign military sales pot is earmarked; in other words, it is assigned by Congress; the Congress has decided what will be done with it; and the President is left with only 8 percent at his discretion, in this rapidly changing world, to meet new opportunities or unexpected needs.

Eighty-two percent of the economic support fund pot is earmarked.

Five countries—Israel, Egypt, Turkey, the Philippines, and Pakistan—receive more than two-thirds of our total bilateral aid.

Comparing the President's initial requests for foreign aid with the amount of discretionary money Congress left for him, the shortfall is about $650 million.

THIRTY-FIVE COUNTRIES COULD BE ZEROED OUT

As many as 35 individual country programs are on the chopping block—facing big cuts or even being totally zeroed out.

Countries like Bolivia and Peru—on the frontlines of the war on drugs. I do not envy President Bush, having to go down to the drug summit next month to urge those two countries to leap into our common battle against the drug kingpins; and then add the P.S.—"by the way, we're cutting your aid."

Countries like Guatemala, which has turned back several coup attempts, and held yet another democratic election. Or El Salvador—faced with a brutal assault by Cuban and Nicaraguan supplied Communist guerrillas. Our response to their situations: "tough luck, your aid is being cut."

Countries like Kenya, Zaire, Liberia, Senegal—key countries on a key continent. The halls of Congress ring with speeches about how important they are—but their aid check arrives with a little note attached: "Sorry it can't be more, but we have more important needs."

Countries on every continent, in every region, beset with every political and economic and social problem. Our message: Your needs are legitimate, our interests are real—but our pockets are empty. It is the wrong message to send, at the wrong time.

It flies in the face of our rhetoric and our responsibilities. It means throwing away enormous opportunities. It undermines America's interests.

Now, what is the answer?

Well, first of all, I do not pretend to have the whole answer or maybe even part of the answer. But I am encouraged because I have heard Republicans and Democrats in the House and the Senate indicate that maybe it is something we ought to debate. Some would say, "Make the pie bigger." Well, we have huge deficits and no mandate for tax increases. And some people have suggested we need to look into questions about money stuck in aid pipelines. Some countries have money they have not spent. And that is certainly worth a look, but I am not yet convinced that's the answer.

We may be able to do something about repayment on existing loans. That is something we should reemphasize. You are supposed to pay loans. Maybe some of these countries, as Congressman HAMILTON and others have suggested, could start repayment of loans.

So these ideas, and others, have to be explored.

But I do think I have part of the answer. Or perhaps I should say; two parts of the answer.

IMMEDIATE NEEDS: FISCAL YEAR 1990

One part related to our immediate needs—our shortfall in fiscal year 1990.

One part related to our longer term need—for greater Presidential flexibility in allocating our foreign aid dollars in fiscal year 1991 and beyond.

I might say at this point, I have been advised by the State Department—I mentioned five countries—that if the President had the flexibility that he should have in foreign aid, two of these five countries would receive more money—Turkey and the Philippines. We have never shortchanged the Philippines until the earmarking came along. I would just suggest, even though I have stated we ought to cut across the board, I am advised by the administration that, if you give the President flexibility, two of the five countries I have discussed—Turkey and the Philippines—could receive additional aid.

But, in any event, for fiscal year 1990, I have urged a 5-percent across-the-board cut in all the large and earmarked foreign aid accounts. As many in the Senate already know, I made that proposal in an op-ed in the New York Times. And I ask unanimous consent to have the text of the op-ed printed in the RECORD.

There being no objection, the material was ordered to be printed in the RECORD, as follows:

[From the New York Times, Jan. 16, 1990]

TO HELP NEW DEMOCRACIES, CUT AID TO ISRAEL, FOUR OTHERS

(By Bob Dole)

WASHINGTON.—It's always a little risky to predict history's verdict on contemporary events. But even from today's sometimes shortsighted perspective, it is safe to declare 1989 as one of the watershed years of the 20th century—the year in which Communism collapsed and the long dormancy of freedom suddenly and dramatically blossomed in places from Poland to Panama.

In fact, events have been moving so fast that, in some ways, we're all playing catch-up in our own analyses and policy prescriptions. A little caution makes great sense in such a volatile environment.

But this much is already clear: We do have an enormous opportunity to consolidate and expand freedom's gains and, at the same time, to enhance America's security and ecomonic potential.

If the new democracies and free market economies fail, the long-term cost to America and to the cause of freedom will be enormous. But if they succeed, it will mean that the United States could enjoy increased security, reduced defense budgets and armament levels and expanded markets for our exports and our ingenuity. Simply put, there is no better investment we can make in America in 1990 than finding ways to support the new democracies.

That's the good news. The bad news is that supporting freedom is not free. It will cost bucks—big bucks. And we must find those bucks within the constraints of our own crushing budget deficits and a foreign aid budget that is already stretched to the breaking point.

We may be able to increase marginally our overall foreign aid expenditures. But the reality is that we are not going to have much more foreign aid money in the next few years, at least until the so-called peace dividend kicks in (if it ever materializes).

The immediate answer must include reallocation of what we are spending on foreign aid now.

Let me make this point clear: I am certainly not suggesting abandoning or short-changing our long-time friends around the world. They remain very important to us, and their needs are just as real and pressing as those of the new democracies.

What I am suggesting is to re-examine some of the huge aid programs in a few countries—the so-called earmarked countries—that take most of our current aid budget. Right now, the big five—Israel, Egypt, the Philippines, Turkey and Pakistan—receive more than two-thirds of our foreign aid.

Does it make sense, at this historic moment, to provide these countries practically all of our aid at the cost of foreclosing dramatically promising new aid initiatives in Eastern Europe or other important countries? What about, for example, those Latin American nations in the front lines in the war against drugs?

Consider this simple fact: A 5 percent cut in current aid programs for the big five would provide about $330 million—enough to respond to the needs of new democracies such as Poland, Hungary, Panama and countless needy countries that under current allocations will receive not one penny of American aid.

Perhaps an even larger across-the-board cut and reallocation would be warranted, as the democratic revolution gains momentum.

That would represent a better balancing of our limited resources with our changing priorities.

No doubt, these proposed reallocations will raise a hue and cry. But can't we convince our friends who would "lose" a tiny amount of their aid how much it is in their interest, too, to help insure against the failure of new democracies and free-market economies?

Can't those pressure groups that have turned some of our foreign aid programs virtually into "entitlement programs" realize that making some minor adjustments in aid allocations can simultaneously serve the countries of their special interest, and serve America?

And can't my colleagues in Congress, who have forced the President to swallow a few huge earmarked aid programs, stand up to domestic political pressure and resist the temptation to politicize foreign aid? Can't they instead support an amended foreign aid strategy that more completely serves the national interest?

Even despite Congressionally mandated aid programs, the President has the authority to make the small reallocations of foreign aid that I believe are warranted. I encourage him to consider seriously making those reallocations now. I stand ready to work hard to insure that the Congress and the American public will back him up.

To me, it boils down to this: are big gains for freedom worth a small cut in a few huge foreign aid programs? I say yes.

Mr. DOLE. Mr. President, I should also take this moment to stress that the headline—written by the Times—has mislead some. So let me stress again: My proposal is for an across-the-board cut in all the large and earmarked programs. You do not take any money from Turkey unless you are going to give Greece the same treatment. And I was aware of that, but somehow the headline was misleading.

As a matter of fairness, and simple arithmetic—to get enough money so that you can address the real needs that exist—I don't believe you should exclude, or fence, any large recipient country from the cuts.

A 5-percent across-the-board cut will yield about $400 million in fiscal year 1990. Some have pointed out that we actually need more. I agree. We are going to have to find more money. We always find more money when we need it. I assume we are going to find more money for some of the emerging demcracies in Eastern Europe. But I simply do not buy the argument from some critics that $400 million is meaningless. Four hundred million dollars is not meaningless. That is like saying a proposal which would house 25 percent of the homeless makes no sense, since 75 percent would still be on the street.

We have to do what we can do. Maybe it is not enough, but it is a start.

FOUR HUNDRED MILLION DOLLAR DOWN PAYMENT

I just do not see $400 million as a trivial amount, not worth the effort; $400 million still means something in Kansas. And I might say that I doubt that the majority of Kansans think we ought to give $400 million to anybody in foreign aid. Still, America is fairly generous and I believe objective about its responsibilities around the world.

More important, $400 million can mean a lot—a whole lot—in our foreign aid budget.

It can make up nearly two-thirds of the shortfall I mentioned earlier, between the President's requests and the discretionary money left for him.

We have already funded a big program for Poland and Hungary. To put that $400 million in perspective, it is enough to pay for the Poland program we have; the Hungary program we have; and still have over $170 million left over, for many more Hungary-sized programs in Eastern Europe, and to address the needs of a dozen or more critical countries around the world.

That is not nonsense, as one commentator called it—but important dollars and cents, to address important needs.

So I strongly believe an across-the-board 5-percent cut in fiscal year 1990 must be part of the answer. Maybe it is 2 percent, maybe it is 1 percent, maybe it is 4 percent. Maybe it is in economic aid. Maybe it is in military aid.

PRESIDENT NEEDS FLEXIBILITY

But, in any event, I think the bottom line is we have to give the President of the United States, whether he is a Democrat or Republican, some flexibility. Look at what has happened since Congress left here last year. Look at the countries that are emerging as new democracies. It seems to me that the bottom line on foreign aid should not be what the percentage is, but is across the board, or how we do it, or how it is finally done, but the real mission is to give the President of the United States some much-needed flexibility; that is the point that the President has made from time to time.

When Congress adjourned last year, there was a drug-running dictator running Panama. There was a megalomaniac and his family running Romania. Now, we have witnessed all of the dramatic changes in Panama, Germany, and Bulgaria; and Czechoslovakia's and Yugoslavia's Communist leaders were still looking for ways to turn back the tide of Communist history. In the 60 days since Congress left town, the world has turned upside down.

And what resources does the President have to respond to all this history? Zero. Zero.

The President has zero dollars. And, to me, that is not the way it should be.

So I would just say, as I conclude, that, first of all, I did not send any political message. Some would say that it is a political message, because once you mention Israel in this Chamber, that is a political message. I am a strong supporter of Israel, but believe me it was not a political message. It was not a message to any country, any one country—Israel or Greece or Turkey or the Philippines. I offered the proposal to start the debate. Senator MOYNIHAN started the debate in another area. I hoped to start a debate in this area. It's a fact: We have too many foreign aid needs and not enough foreign aid resources. And, like any other program, when we cut domestic programs, we go back and review domestic programs. We ought to go back and review foreign aid programs and ask some questions of these countries and make certain that the money we give in economic aid and military aid is being spent for appropriate purposes.

So, if someone is looking for veiled messages or secret codes or hidden motives, I would just say, look at my record; and then look somewhere other than this proposal. It is what it is, and I hope it will be considered and evaluated and judged on that basis.

We do live in a new world. It just seems to me that congressional appropriators have all kinds of demands and never enough money. We could always spend more, no doubt, some of our friends probably deserve more. But our till is empty.

So the debate is underway. I have been encouraged by statements I have heard from Congressman HAMILTON on the House side and in certain publications that indicate we must have a debate. I have discussed this issue with the majority leader, Senator MITCHELL, and with Secretary Baker. I know Secretary Baker has discussed it with the Speaker on the House side and with Congressman MICHEL and will be discussing it with others. I just hope the debate will go forward and that all of my House and Senate colleagues will come on in. The water gets a little warm sometimes, but otherwise it is fine.

CUTS IN SOCIAL SECURITY TAXES

Mr. SHELBY. Mr. President, I rise today to oppose legislation that would roll back the Social Security tax increase that went into effect this year.

On December 29, the distinguished senior Senator from New York announced his intention to introduce legislation that would cut Social Security taxes by $55 billion in 1991 alone. While I commend Senator MOYNIHAN for bringing this issue to the forefront of Congress, I must oppose his proposal.

The Social Security Program is perhaps the Nation's most important social program. Since its inception nearly 54 years ago, 39 million people have come to rely on monthly Social

Security benefits. Over 130 million individuals are now paying into the Social Security System with justifiable expectations of a reasonable return for that investment during their retirement years.

I have consistently opposed legislation that could result in the reduction of these hard earned benefits. I am compelled to do so again.

Some of the Nation's leading economists, respected on both sides of the aisle, have warned that any move to cut Social Security taxes could: Lead to an increase in interest rates and further damage the economy; result in later tax increases; and possibly lead to a reduction in Social Security benefits.

None of these consequences is acceptable.

Over the past 7 years, the Social Security system has been accumulating substantial reserves to protect future beneficiaries. Yes, the tax has increased, but benefits have kept pace with these increases. Since 1978, the maximum retirement benefit at age 65 has more than doubled.

Many of my colleagues will remember that prior to the passage of the Social Security Amendments of 1977 the Social Security trust was facing eminent bankruptcy. Congress enacted legislation to take care of the short-term crisis. Public Law 95-216 was heralded as a measure that would take the trust safely through the nineties.

In subsequent years, the Nation's economy was in turmoil. We were faced with record inflation and a second oil crisis. Once again, Social Security was in trouble. In 1983, Congress was compelled to act again to preserve Social Security. Public Law 98-21, the Social Security Amendments of 1983, laid the ground work to rebuild Social Security reserves.

A report compiled by the General Accounting Office [GAO] at the request of Senator MOYNIHAN, points out the sensitive nature of the Social Security trust in relationship to the state of the economy. The GAO reminds us that an unforeseen, serious recession can cause the balance of the trust to fall rapidly, while a boom can cause reserves to accumulate rapidly. This is a point that is all too evident in light of the state of the economy and the Social Security trust between the years of 1977 and 1983.

Experts have agreed that a reasonable reserve for any unforseen economic crisis would be a balance within the range of 100 to 150 percent of annual expenditures. Under current law, the Social Security reserves are projected to reach $500 billion in 1993 and $12 trillion by 2030. While we have begun the process of building these reserves, we are currently only at a balance of approximately 77 percent of annual expenditures. Consequently, I believe that Congress must continue to move cautiously to insure the well-being and future security of generations to come.

A roll back in Social Security taxes would bring about a drastic reduction in surplus funds. While I share the concerns of a great many of my colleagues regarding the factoring of the Social Security trust fund surplus into the calculation of the Federal budget deficit, I do not believe that doing away with the surplus funds now being paid into the Social Security trust is the most prudent way to confront this issue.

Legislation has already been introduced in the last session of Congress that would prohibit the annual Social Security trust fund surplus from being factored into the calculation of the budget deficit. I joined as a cosponsor of S. 401, the Social Security Preservation Act, introduced by my distinguished colleague, Senator ERNEST (FRITZ) HOLLINGS.

S. 401 would be a bold step in unmasking and exposing the full scale of the Federal deficit. Borrowing from the Social Security trust fund surplus to mask the true size and depth of our Federal deficit is a grave deception of the American people.

Yes, we must move toward truth in budgeting. Yes, we must protect the interests of both present and future Social Security beneficiaries. However, we must carefully evaluate the means through which we seek to accomplish these goals.

THE AIDS COVERUP

Mr. HELMS. Mr. President, the January 22 edition of Time magazine included a most enlightening report, "The AIDS Political Machine," in which Time describes the activities of a well-oiled special interest lobby which has distorted the statistics of the public health apparatus of the U.S. Government.

It is important that an objective assessment be made of the question raised by the magazine: Have AIDS activists distorted the national medical response to the disease? It is essential that all of us review the following facts and decide for ourselves whether the militant AIDS lobby has not in fact skewed the national health care agenda to the detriment of millions of other critically ill Americans who do not have, nor will ever, have AIDS.

Mr. President, the Centers for Disease Control will shortly announce that the number of Americans infected with the AIDS virus is far below the alarming numbers projected in the middle 1980's. In fact the predicted—circa 1986—1.5 million infections may turn out to as low as 650,000. Despite the dire warnings, there has been no AIDS outbreak in the heterosexual community.

Federal AIDS funding is now at $1.6 billion per year. Compare that with the $600 million allocated for heart disease—which kills millions. There are 4 million Americans with Alzheimer's disease. Each one will die a distressing death, yet Alzheimers funding is a mere drop in the bucket compared to AIDS. Cancer kills half a million people each year, but cancer research is shortchanged in the headlong flight to appease the AIDS lobby.

The dollar figures used for AIDS research represent more than excessive Federal attention to the disease. Slowly but surely money and talent are being diverted from other projects to AIDS research. Because AIDS research is so singularly focused, chances for spinoff medical discoveries are remote. As Doctor David Korn, dean of the Stanford Medical School, told Time, "* * * target money too narrowly, you exclude other areas that may prove very fruitful."

Mr. President, the AIDS lobby has forced Government to do away with proven public health measures which have successfully controlled deadly diseases in the past. Activists demand quick Federal funding, and approval of untried miracle cures, thereby leaving the door open for quacks and snake oil salesmen. Approval of AZT was rammed through the FDA system in less than 4 months. James Todd of the American Medical Association noted that "penicillin couldn't get through that fast." (The average drug approval time is more than 2 years.)

Mr. President, I have yet to mention the political agenda which keeps the AIDS machine rolling along consuming dollars and traditional values as it goes.

AIDS is on the way to becoming a legal handicap for discrimination purposes. The Americans With Disabilities Act, which passed the Senate in September, extends civil rights protections to HIV carriers even though upwards of 90 percent of them caught the disease through unlawful conduct and warped "life styles."

Homosexual activists hailed the passage of the Americans With Disabilities Act. We may shortly see the Hate Crimes Statistics Act, which leaders of the radical homosexual left proclaim as the most important step toward including "sexual orientation" in the Civil Rights Act.

Mr. President, compassionate Americans have seen their Government make concession after concession to the AIDS lobby, and to the homosexual movement which supports it. What originally began as a response to a public health emergency has become a battle for the transformation of the American value system. I doubt that many look with favor upon that.

COMMENDING FRANK YOUNG

Mr. HATCH. Mr. President, last month, the leadership at the Food and Drug Administration underwent dramatic change. After serving as FDA Commissioner for the last 5 years—longer than any Commissioner since Dr. George Larrick, who served in the post from 1954 to 1966—Dr. Frank E. Young has been appointed by Secretary Sullivan to the new post of HHS Deputy Assistant Secretary for Health, Science, and the Environment.

Dr. Young's departure from the FDA marks the end of an important chapter in the agency's history. As we move into a new decade and reflect back on the 1980's, several key tests of integrity and leadership stand out.

Our health care system was called upon to deal with one of the most daunting epidemics that has plagued mankind—AIDS. Treating those afflicted with this terrible disease, curbing its spread, and engaging in a massive program of research to find a cure became one of the highest priorities for health leaders in this country and around the world.

Waging this battle has required innovative leadership, compassion, and a strong will. Extraordinary measures have been necessary to combat this menacing and vexing problem. Since becoming FDA Commissioner in mid-1984, Dr. Young has been a constant force on the front lines. For example, Dr. Young paved the way for an accelerated drug review process that provided needed relief for tens of thousands of AIDS patients through the approval of major new therapies such as AZT. This special program has also yielded approvals for a number of investigational new drugs for AIDS treatment in record-breaking time.

As important as the AIDS problem is, it was far from the only issue on Commissioner Young's agenda. It was Dr. Young who provided the impetus for streamlining FDA's internal review processes by which investigational new drugs are approved for use in treating patients with debilitating diseases, such as cancer and Alzheimer's disease, and to implement another plan for reducing the time required for human testing of life-sustaining drugs. This latter initiative reduced the average approval time from 7.5 years to 4.2 years without undermining the scientific integrity of the process or diminishing product safety and effectiveness.

This new wave of efficiency in product reviews carried over to the area of biotechnology where Dr. Young led the FDA team to approve over a dozen therapeutics and vaccines in less than half the usual time. Among these were milestone drugs for treating lethal leukemia, fighting the rejection of kidney transplants, and dissolving blood clots in heart attack victims.

During his watch, the FDA also eliminated overdue medical device applications awaiting product review and established clearer procedures for processing new submissions from the device industry. This resulted in the approval of an impressive array of medical products, many of the cutting edge of technology, such as the total artificial heart, an implantable heart defibrillator, lithotripsy machines to noninvasively destroy kidney stones, and laser angioplasty devices.

In the area of prevention, Dr. Young led the fight for greater truth in food adverstising and for ingredient labeling to assist health conscious consumers to control their diet. In addition, Dr. Young authorized the ban on the use of sulfides in salad bars and required the disclosure of sulfide use in substances through product labeling. At the same time, Commissioner Young was a forceful advocate for change in how the FDA regulates food products that contain trace amounts of additives that have been scientifically shown to pose insignificant risks to human health.

During his time at FDA, Dr. Young also faced serious national emergencies. Among these were the 1986 Tylenol tamperings, which posed a grave threat to American consumers. Dr. Young and the FDA moved rapidly and effectively to ameliorate this problem and, in the wake of the incidents, secured the cooperation of the food and drug industries to undertake vigorous tamper resistant packaging efforts. FDA's quick and decisive action helped save American consumers from the "cries of confidence" that could have easily been the outcome of this heinous act of tampering with medications.

Dr. Young also led the crackdown on the generic drugs industry to root out wrongdoing and to shore up public confidence in these low-cost products by ensuring the safety and quality of generic drugs now in use. Although this unfortunate episode occurred during Dr. Young's tenure, it should not tarnish the major remedial actions that have been taken to fortify the generic drugs program as a result of his personal intervention. Nor should it overshadow his overall record of achievement as Commissioner.

I have remarked many times in this body that FDA is a preeminent institution in consumer protection, yet it is forced to function under conditions that are far from optimal. As I said last April in introducing S. 845, a bill to revitalize the FDA, the agency must have adequate financial and human resources in order to meet both current and future demands. Creating incentives to enhance the recruitment and retention of high caliber scientists and regulatory professionals is a prerequisite to an effective FDA. Consolidating and upgrading FDA's facilities, particularly its laboratories, is essential to the coordination of the agency's broad-ranging activities. FDA has historically been underfunded and that problem, too, requires serious and prompt attention. These are all goals that Dr. Young believed in and worked hard to bring to fruition.

Mr. President, by any standard measure, Dr. Young has distinguished himself as a national health leader and as someone who cares deeply about the future welfare of an agency that regulates products which account for 25 percent of consumer goods in this country. The Nation is indebted to him for his service to the public health and to the betterment of American society. I thank him and wish him well in his new assignment, where I know he will serve Secretary Sullivan, President Bush, and all American consumers with equal distinction.

TERRY ANDERSON

Mr. MOYNIHAN. Mr. President, I rise to inform my colleagues that today marks the 1,775th day that Terry Anderson has been held in captivity in Beirut.

CHINESE STUDENTS EMERGENCY IMMIGRATION ACT

Mr. PRESSLER. Mr. President, I have the greatest regard for President Bush and the outstanding leadership he is providing. Thus it pains me to say I shall vote against his position regarding the China students immigration legislation. It seems to me that we are voting on a fundamental human rights issue in this case. The memories of the Tiananmen Square Massacre in China, the continuing cruel repression of disent there, and the pleas of the Chinese students who might be forced to return to China are such that I think the President has made one of his rare mistakes with this veto.

During this time of peaceful progress toward greater freedom and democracy in Eastern Europe, the continuing represssion of liberty in China is a painful reminder that the pursuit of freedom sometimes imposes heavy costs on those who lead the way. We should not, however, reward those who exact that cost.

Rightly or wrongly, the Government of the People's Republic of China would interpret enactment of this legislation as a signal that the United States Government is willing to look the other way whenever Beijing officials resort to massacre and imprisonment to silence peaceful demonstrations. We should not send such a signal. That would destroy aspirations for freedom, not only in China, but also in other authoritarian nations.

If the Chinese Government truly wishes to restore normal relations

with the United States, it can do so by releasing political prisoners and demonstrating greater respect for human rights. Official Chinese threats to suspend educational and cultural exchanges with our Nation unless the veto of this bill is sustained should be rejected. The act of overriding this veto is a statement that the American people care more about expanding respect for human rights than doing business as usual with a regime that has not been elected by the people and that does not tolerate peaceful criticism.

I share most of President Bush's foreign policy objectives, and, as I said earlier, I regret opposing him on this issue. However, I believe that the President was poorly advised in this case. President Bush should be applauded for trying so hard to compensate for this veto through his directives to the Immigration and Naturalization Service to allow waivers of current requirements affecting Chinese students. Unfortunately, portions of the directives appear to be in conflict with existing law. The bill as passed by Congress is not similarly handicapped. The bill provides stronger protection for Chinese students who have a legitimate fear of persecution if they were forced to return to China in the current circumstances.

President Bush is keenly aware of the importance of China to United States interests. He has struggled hard to find an acceptable formula that might lift United States-China relations to a higher plateau. The President has made a good effort, in other words, to direct those relations toward more positive areas. I believe that has been his intention and commend him for it.

Another area of concern with this veto relates to the Armstrong provision in the bill, authored by our distinguished colleague Senator ARMSTRONG of Colorado. That provision permits granting refugee or asylee status to Chinese who flee coerced abortions or forced sterilizations. The sad fact is that such practices do occur in China. Under current law, people fleeing from China for these reasons have great difficulty in trying to enter the United States as refugees, or seek to asylum here. H.R. 2712, with the Armstrong provision, would make clear that those people could enter the United States as refugees or asylees. If the veto of this bill is upheld, we would remain under current law, which does not reach out to Chinese fleeing forced sterilization and abortion in their homeland.

For the reasons I have stated, Mr. President, I shall vote to override the veto of H.R. 2712, the Emergency Chinese Adjustment of Status Facilitation Act.

CYPRUS VISITORS

Mr. PRESSLER. Mr. President, I rise today to extend a warm welcome to an official parliamentary delegation from the Republic of Cyprus. The delegation is led by the distinguished President of the Cypriot Parliament, Dr. Vassos Lyssarides. Joining Dr. Lyssarides in this visit to Washington are Mr. Dinos Constantinou, the chairman of the House Standing Committee on Financial and Budgetary Affairs; Mr. Alexis Galanos, chairman of the House Standing Committee on Foreign Affairs; Mr. Takis Hadijdemitriou, chairman of the House Standing Committee on Defense Affairs; and Mr. Yiannakis Matsis, chairman of the House Standing Committee on Development Plans and Public Expenditure Control. These representatives of the Cypriot people have come to Washington to discuss the division of their country.

Cyprus has remained a divided nation since the brutal Turkish invasion in 1974. Today, some 15 years since the invasion, Turkey continues to foster this division. Thirty-five thousand Turkish troops illegally occupy Cyprus. Despite numerous calls by the international community for the removal of its troops. Turkey has made no effort to do so.

Furthermore, Turkey has fostered the division by attempting to destroy the demographics of the country. This has taken place through the colonization of the occupied zone with Turkish settlers. It is estimated that 65,000 Turkish citizens are living in homes formerly owned by Greek-Cypriots who were forced to flee during the invasion. At present, the threat of further colonization remains. Last June, Turkish Cypriot leader Rauf Denktash threatened to settle Turkish refugees from Bulgaria on Cyprus.

Recent efforts by the U.N. Secretary General to resolve the conflict have been thwarted by Mr. Rauf Denktash. For example, in July of 1989, the Secretary General set forth a set of ideas as food for thought for the two sides to discuss. Mr. Denktash, wrongly claiming that the United Nations lacked authority to present the food for thought document, walked away from the negotiating table and has not returned. Since that time, the Secretary General has worked diligently to bring the two sides together. Most recently he invited President Vassiliou and Mr. Denktash to meet in New York on February 12 for 2 weeks of intensive meetings in order to address and settle their differences. Again, Mr. Denktash, without sufficient reason, has declined the invitation to continue talks.

Mr. President, it has become more and more obvious to this Senator that Mr. Denktash is uninterested in resolving this problem. In contrast to Mr. Denktash, President Vassiliou has on numerous occasions shown his sincere desire to negotiate in good faith, and I know if given the opportunity, he would favorably resolve the conflict for all the parties on Cyprus. In addition to the President, newly appointed Ambassador Michael E. Sherifis, like the very able former Ambassador Andrew J. Jacovides, remains dedicated to educating the United States on his nation's plight. His interest in resolving the conflict is genuine. I encourage our distinguished colleagues to meet with him and show that we too are concerned about the predicament on Cyprus.

The Berlin Wall has been torn down, yet the green line remains on Cyprus. I urge our colleagues to hear what our distinguished visitors from Cyprus have to say, and help them end the tragic partition of their island nation.

DEATH OF JOHN HARTY

Mr. SARBANES. Mr. President, with the untimely death earlier this month of Mr. John Harty, the State of Maryland and indeed the entire Nation lost an extraordinarily able and caring public servant. Mr. John Harty, or "Jack" as he was known to his family and friends, was a senior international affairs specialist with the Food and Drug Administration.

While Mr. Harty was on an assignment in Chile, the plane carrying him, an FDA field investigator and two Chilean officials crashed in the mountains north of Santiago. All four passengers and the pilot died in the crash. Mr. Harty was there at the request of the Chilean Government to observe the steps taken by Chilean fruit processors to safeguard their exports of fresh fruit products.

Last year, you will recall, the FDA embargoed the entry of Chilean produced fruit into the United States after detection of cyanide in several grapes. After extensive product testing by FDA laboratories, the embargo was lifted and the flow of Chilean fruits to United States markets was resumed. In light of the adverse impacts of this regrettable incident, our Government joined with the Republic of Chile to create a working plan designed to allow prompt action on problems arising from suspected chemical contamination of fruit products.

In keeping with this cooperative agreement, Mr. Harty and his colleague volunteered to return to Chile to tour that country's fruit growing districts and confirm that the preventive measures had been carried out.

I think that every Senator would agree with me that the FDA is a preeminent force in consumer protection, whose stature is well know all over the world. Its international prominence and public support here in the United States is due in large measure to the

competence and sacrifice of the over 7,500 men and women who make up this agency. The work of Mr. Harty, which spanned more than a quarter of a century, ended with the supreme sacrifice. Jack Harty will be remembered as a dedicated public servant and as a deeply admired and respected family man and friend.

This Nation is better for him and for his service, as well as for the contributions of his fallen colleague. We are indebted to them both and mourn their passing.

GOV. L. DOUGLAS WILDER'S INAUGURAL ADDRESS

Mr. WARNER. Mr. President, it was my profound pleasure to be among the guests invited to the inauguration of L. Douglas Wilder as Governor of the Commonwealth of Virginia on Saturday, January 13.

That gathering was, indeed a historic occasion in the history of my State in The History of the American political system. All who attended the ceremony were moved by Governor Wilder's remarks.

I was particularly impressed by the Governor's pledge to demonstrate during the next 4 years that he will be beholden to but one special interest: The welfare of Virginians, all Virginians.

I wish Governor Wilder success during his tenure. For, as I told him that day, to the extent he succeeds, all Virginians succeed.

Mr. President, it is my pleasure to ask unanimous consent that the text of Governor Wilder's excellent inaugural address be printed in the RECORD at the conclusion of Senator ROBB'S remarks.

The PRESIDING OFFICER. Without objection, it is so ordered.

(See exhibit No. 1.)

Mr. ROBB. Mr. President, it is with a great deal of pleasure that I join with my distinguished senior colleague, Senator WARNER, in asking that the remarks of Virginia's new Governor on the occasion of his inauguration be included in the RECORD.

January 13, 1990, was a great day for the Commonwealth of Virginia and for the Nation. Much has been made of the historic aspect of the event, and to be sure that day marks an important milestone in this Nation's progress. But I see the election of Lawrence Douglas Wilder as the 66th Governor of Virginia as the natural and logical extension of Thomas Jefferson's notion of an aristocracy of merit, as Virginians proved once again that we look to the most qualified, most experienced individual to lead us.

Senator WARNER and I were present as Governor Wilder delivered his inaugural address. We commend it to you for its reflection of the sweep of history which led to the particular moment and its appreciation of the challenges that Virginia and the Nation face as the 20th century comes to a close. I am happy to join with Senator WARNER in asking that it be reprinted in the RECORD.

EXHIBIT NO. 1

TEXT OF GOVERNOR WILDER'S INAUGURAL ADDRESS DELIVERED AT THE CAPITOL

(Following is the text of Gov. L. Douglas Wilder's inaugural address)

Mr. Justice Powell, Mr. Justice Carrico, to the lieutenant governor, to the attorney general, members of the General Assembly, distinguished guests, family and friends, and my fellow Viginians, we gather here today for what is both a culmination and a continuation of the democratic process.

Four years ago, I stood on this spot to assume the second highest office in the commonwealth. Today, because of your faith in our efforts, I stand before you as chief executive of this state. And now—in keeping with the sanctioned privilege extended to all governors—it is my honor to address the people of this commonwealth, and to express to my fellow citizens the profound gratitude and deep sense of purpose that I feel in fulfilling your expectations.

Candor and honesty would have me admit to you that I was not blessed with the foresight to know that this moment was in the offing when I stood here in 1985. Having been tested in the political crucible of trial and cross-examination, I have been rendered a verdict by having had delivered unto me the greatest outpouring of votes ever accorded any candidate for this great office. For that, I shall be eternally grateful. And—be assured—I shall demonstrate that gratitude during the next four years by being a governor who will be beholden to but one special interest: the welfare of Virginians, all Virginians.

"THE BEST OF MY ABILITIES"

But my gratitude is not of such recent origin. It is said "To whom much is given, much shall be expected." I will be the first to admit that I have been the beneficiary of much through no endeavors of my own. While I have indeed worked hard and performed to the best of my abilities, I have also had a few breaks along the way.

Indeed in every walk—in every period of my life—there have been many more deserving and justly entitled to the fruits that wholesome opportunities present. And yet, for many, those chances never came and the bell of fulfillment never tolled for them. Providence indeed has directed my course. And I shall remain ever mindful of my good fortune.

In recent years, Virginia too has been blessed with good fortune. The progress and the prosperity we have enjoyed during this period has enabled us to reclaim the respected achievements of times past.

In looking to our accomplishments in education, economic development, the environment, employment, housing or transportation, we find that Virginia ranks among those states in the vanguard of forward looking movement. Not surprisingly, the ensuing pride in seeing our state climb in rank among our sister states in the nation and in preeminence among the Southern states, cause Virginians everywhere to feel good about our cause, our mission, and our success in forging Virginia's New Mainstream.

COMMITMENT TO LOOK AHEAD

That commitment to looking ahead and not behind—of building rather than destroying; of bringing people together rather than pitting them against each other—also calls for me to address you with measured sobriety in facing conditions in the commonwealth today, and I will comment further in that regard when I address the General Assembly on Monday.

But for this moment, let me assure you that I do not intend to participate in bringing to a halt the momentum to which people of Virginia have grown accustomed, supported and enjoyed.

Cicero in parting observation, noted that, "A commonwealth is not any collection of human beings . . . but an assembly of people joined in agreement on justice and partnership for the common good, and a community where civility must reign and all must live peacefully together." And we know what happened to Cicero's Rome which could not pass on the heritage of its past to the people of its future. But we have done so; we can do so. And we shall do so.

There are times when the people of our state and of our country can feel the resurgence of the dominance of the individual spirit which proves daily to be unconquerable. Whirlwinds of rebellion shake all shores where tyranny once ruled, and we are redeemed in our deeply held and treasured beliefs in the development of the high possibility of every individual who breathes the sweetness of liberty's air.

At this time—and in the place where so many great names in American history have trod—we renew this celebration of freedom in the full and certain knowledge that with it comes great responsibility.

Without question, much tighter economic times which loom in the days ahead will test to the fullest our ability to make hard decisions, to lead, and to govern.

INCREASED FREEDOM

But progress will be possible.

Opportunity can be expanded.

Freedom can be increased.

Resources employed in the past for the finer things in life can be—and will have to be—deployed for the more serious of our needs.

For we know that freedom is but a word for the man or woman who needs and cannot find a job.

Freedom—as it has been written—is a dream deferred when it "Dries up like a raisin in the sun, and stinks like rotten meat."

Freedom is meaningless when a woman's right to choose is regulated outside the dictates of her own faith and conscience.

Freedom is impotent when there is intolerance to those who hold moral and political beliefs different from our own.

Freedom is restricted when labor and management cannot reach agreements.

Freedom is impossible for the uneducated who try to live in today's complex world.

Freedom is restrained for business and industry when our network of transportation is allowed to deteriorate.

Freedom for the police is denied when their resources are unduly limited.

Freedom for the people is assaulted when lawful authority is abused.

Freedom for the next generation is mortgaged when we destroy our environment.

And—as has been proven throughout recorded history—freedom is nowhere to be found when the people are overtaxed and overregulated.

As we salute the idea of freedom today, let us pledge to extend that same freedom to others tomorrow.

Let us fulfill the perfect promise of freedom and liberty left as a legacy for us by those who found this commonwealth.

And let us likewise be thankful that—while our country gave birth to a freedom long denied and delayed for all who loved freedom—the belief in these dreams held by those forebears was passed from generation to generation, and spawned the seeds that propagated the will and the desire to achieve.

We are on hallowed ground today, and the steps we take from this place must be steps of honor. The words we issue must be words of wisdom. The laws we passed must be laws of mercy and justice. And the faith we possess must be true to the Almighty.

In meeting these challenges—and they will be difficult—I ask your help and that of God. I do not shrink from the enormity of the task. In 6 million Virginians, there is endless courage and enormous strength—in the coming years, we will need it all.

As we all know, as complexities of human relationships increase, the power to govern them also increases. The proper use of that power must always be subordinated to the public good and that shall be uppermost in the hearts and minds of those to whom those powers are justly delegated by the people.

DESTINIES NOT FULFILLED

We shall not pause; we shall not rest upon laurels. For we have not fulfilled our destinies.

In the coming years, we must persist and make every citizen of our commonwealth the subject of our interest and concern. We must insist that every agency of our government utilize every proper and effective instrument to carry out the will of the people—for, as with any democracy . . . the will of the people is supreme.

An administration can only be effective when it works for the people . . . all of the people. Our prosperity can continue only if our leaders and private citizens alike stay constantly advised of all of the relevant facts.

In turn, we can expect to receive your support—as well as your constructive criticism—when you receive true information from those of us who serve as your trustees.

I am undaunted by that which lies ahead, as we have shown at other points in our history what we can accomplish when we fearlessly face the future. We have—and we shall—shun the defects of destruction, and shall work to achieve the highest degree of improvement in our status of which we are capable.

We have a common concern, and we share the responsibility. I see a Virginia of hope and happiness, of mothers and fathers building nurturing families in those hearthstones where the cradle of childhood is rocked with wholesome expectations for the future—a future in which an education is within intellectual and financial reach; a future in which adequate and affordable housing is possible; a future in which nothing is impossible.

I see a place where crime is not only reduced and our streets and neighborhoods are safe, but the root causes thereof—illiteracy, poverty, joblessness—are stamped out.

SHELTER FOR HOMELESS

I see a Virginia where the homeless can find shelter, where hunger cannot and does not stalk those unable to fend for themselves.

We must set priorities in the coming years.

Specifically, we must be partners in working toward a revived economy—a healthy and thriving economy that provides equal opportunity for all Virginians. While the flow may have slowed, Virginia's New Mainstream is far from drying up. It shall be the task of this administration to ensure that a rising tide of prosperity and opportunity is possible in the future.

Some describe conditions in our commonwealth today in dismal terms. And yet, one must question the resolve and the reserve of those who are not called upon to make sacrifices greater than those who have preceded us.

Despite our economic slowdown, we are living in the best of times. And they can be even better. And they will be better.

If you will forgive me . . . a moment of nostalgia . . .

We mark today not a victory of party or the accomplishments of an individual, but the triumph of an idea—an idea as old as America; as old as the God who looks out for us all.

It is the ideal expressed so eloquently from this great commonwealth by those who gave shape to the greatest nation even known . . . Jefferson, Madison, Mason and their able colleagues.

The idea . . . that all men and women are created equal;

That they are endowed by their Creator with certain inalienable rights;

The right to life, liberty and the pursuit of happiness.

The idea that shows forth in the concepts of freedom and opportunity—not only in Virginia—but more recently in the fresh, new winds of Eastern Europe and the tumult of Panama.

If these words about freedom are to be heard at all today, I hope they will be heard by the young people of this commonwealth. I want them to know:

That oppression can be lifted;

That discrimination can be eliminated;

That poverty need not be binding;

That disability can be overcome.

And that offer of opportunity in a free society carries with it the requirement of hard work, the rejection of drugs and other false highs, and a willingness to work with others whatever their color or national origin.

We have come far, but we have far to go.

We have done much, but we have much to do.

I ask for your energy; for your understanding; for your dedication; for your patience; and—yes—for your prayers.

Four years ago, I said to the people of Virginia that I was proud to be a Virginian. I did not think then that my pride could possibly be greater. And—in theory—it isn't.

But in reality, that pride does burst forth, and lifts my voice and my spirit to proclaim, "I am a son of Virginia."

I thank you all. And may God be ever with us.

THE PRESENTATION BY CHAIRMAN OF THE JOINT CHIEFS OF STAFF GEN. COLIN POWELL OF THE UNITED STATES POSITION AT THE SEMINAR ON MILITARY DOCTRINE IN VIENNA, AUSTRIA, ON JANUARY 16, 1990

Mr. WARNER. Mr. President, as the Senate convenes today here in Washington to begin the 2d session of the 101st Congress, there is ongoing in Vienna, Austria, a ground breaking, and perhaps revolutionary, seminar on military doctrine being conducted within the framework of the negotiations on confidence and security-building measures as part of the conference on security and cooperation in Europe.

Mr. President, this seminar on military doctrine brings together for the first time the senior military leaders of the 35 nations participating in the negotiations on confidence and security-building measures to present, discuss, and question the overall military strategy and doctrine of each of those nations. To my knowledge, never before has there been such an opportunity for this type of high-level, detailed exchange of views about the military strategy and doctrines of this large a group of nations. These presentations and discussions will last for 3 weeks, covering the period of January 16 through February 5, 1990. These discussions should lead to a greater appreciation and understanding of the military capabilities and intentions of the participating nations.

The United States was afforded the honor of making the initial presentation of its military doctrine when the seminar convened last Tuesday morning, January 16, 1990. The Chairman of our Joint Chiefs of Staff, Gen. Colin Powell, delivered the opening U.S. presentation.

Mr. President, I urge each of my colleagues to read the statement of General Powell. It is an eloquent presentation of the appropriate role of U.S. military force within the broader context of the peaceful, democratic ideals of our Nation. I am especially impressed by the fact that no other nation in the world can lay claim to the same historical and constitutional underpinnings for their armed forces as were cited by General Powell. Specifically, General Powell noted that each member of our Armed Forces is required to pledge his sacred honor to the Constitution of the United States—not to a man and not to a government, but to the ideals expressed in our Constitution.

Mr. President, I commend General Powell for his presentation before the Seminar on Military Doctrine in Vienna. The United States has a right to be proud of the role its Armed Forces have played in our history and will continue to play in our future. That role as defender, not aggressor, and peacekeeper, not war maker, is one to which the military forces of all nations should aspire.

Mr. President, I ask unanimous consent that the full presentation made by General Powell be printed in the RECORD at this point.

There being no objection, the material was ordered to be printed in the RECORD as follows:

CSBM MILITARY DOCTRINE SEMINAR PRESENTATION BY GEN. COLIN L. POWELL, CHAIRMAN, JOINT CHIEFS OF STAFF

As I begin my remarks today. I am struck by the historic events which have made possible this unprecedented gathering. On this date six years ago, representatives from the 35 CSCE member States gathered in Stockholm for the CDE Conference. That Conference came at a time of deep division between East and West. Glasnost and Perestroika had not yet emerged in the Soviet Union. Arms control negotiations had come to a standstill. There was tension in the world, and it was difficult to find cause for hope.

How far we have come since that date: A CDE agreement, a historic INF treaty, broad arms reduction negotiations, East-West summitry, and epochal changes taking place in Eastern Europe and the Soviet Union. The world is full of hope and promise as we begin the last decade of a turbulent century.

I am struck as well by the setting for our seminar. This palace is forever linked in the annals of history with one of the greatest of conferences: The Congress of Vienna. Those who attended that conference nearly two centuries ago were intent on imposing stability in Europe. Our task today is different: It is to help shape a new order in Europe; one that responds to the desires of our citizens to live in peace, security and freedom. So this must not be a routine conference. We must educate each other. We must break down walls and build bridges. We must talk straight and be candid. This is a seminar for work and not just words. As the senior military officers of our respective countries, we are duty bound to contribute to the historic process unfolding today across this continent.

THE CONSTITUTION

Let me begin by sharing with you an event that occurred when I was commissioned into the Army as a second lieutenant. At that time I was required to take an oath to support and defend the Constitution of the United States. The U.S. Constitution is a remarkable document—and a demanding one for those of us who choose to make our career in the military. We are required to pledge our sacred honor to a document that looks at the military, and in particular at my service—the Army—as a necessary, but undesirable institution useful in times of crisis; and to be watched carefully at all other times.

The authors of this document exacted this oath from me because they insisted that I and all soldiers understand that what we were to defend was not just land, or natural resources, or empire, or government, but an idea. An idea borne of the age of the enlightenment. What we were pledged to defend were the rights of men in a system ruled by law. When called upon, our "citizen army" had to remain true to this oath even during the gravest of crises.

During the debates over our Constitution, one of our Founding Fathers, James Madison, defined the strength of the United States as emanating from the people, united behind their Government. He wrote, "America, united with a handful of troops, or without a single soldier, exhibits a more forbidding posture to foreign ambition, than America disunited, with a hundred thousand veterans ready for combat." Indeed, so strong was the sentiment against maintaining a "standing army" that one of the authors of the Constitution recommended a limit of 2,000 troops. George Washington responded, "An excellent idea—if only we can convince our collected enemies to maintain no more than an equivalent amount."

Our Constitution gave Congress the right to declare war and to "raise and support armies," but prohibited the Congress from appropriating funds for the Army for more than two years at a time. Reflecting the fact that the United States is a maritime nation dependent on the seas for security and commerce, the Constitution granted Congress the right to provide for and to maintain navies, but to raise armies only when needed. The Constitution made the President Commander in Chief of the Armed Forces. But his power would not match those of his contemporaries abroad.

Above all, the Constitution was the embodiment of the will of the people. Its essence is captured in its first three words, "We the People." Having vested power in the Government, the Constitution vested final authority—the essence of accountability—in the people. Policies may be reversed, elected officials may come and go, but the Constitution—the law of the land, the will of the people—is permanent.

AMERICA IN THE TWENTIETH CENTURY

My purpose in tracing this seeming ambivalence in our Constitution toward the ends and means of military force is to underscore two fundamental points with respect to United States military doctrine. First, from the very birth of our Republic our national bias has been against large standing armies. Indeed, they are seen as an aberration, contrary to the spirit of democratic government. Second, the American people have insisted that when we do have to raise armies, their posture must be defensive, and the rationale for their size must be relentlessly examined so that their ranks can shrink at the first prudent opportunity. As I sit here today my Congress is at home in Washington thinking up ways to shrink our Army.

The discomfort we Americans have toward maintaining a military establishment was dramatically demonstrated in the aftermath of World War II. As President Truman said, "Once hostilities are over, Americans are . . . spontaneous and . . . headlong in their eagerness to return to civilian life. No people in history have been known to disengage themselves so quickly from the ways of war." Having fought total war, Americans yearned to return to total peace. So great was the demand for demobilization after World War II that six months after final victory, one-half of our twelve million men under arms had returned to civilian life; within a year, only three million remained on duty.

This desire to move to total peace is also reflected in the way Americans view their military leaders. Dwight Eisenhower, from Supreme Commander in Europe became a university president; is remembered for his two terms as President of the United States, for his willingness to reach out to the Soviet Union with ideas such as "Open Skies"—an idea which is finally coming to fruition—and for his warning to the American people to beware the dangers of the "military industrial complex." Douglas MacArthur, Supreme Commander in the Pacific, is remembered for planting the seeds of democracy in Japan. And George Marshall, organizer for war, is revered as an architect of peace. In war Americans support their generals, but they honor and remember them not for what they destroyed in wartime but for what they created in peace.

THE UNITED STATES MILITARY POSTURE IN THE POST-WAR PERIOD

I dwell on this historical prelude because it is essential to an understanding of American military doctrine in the post-World War II era. The wrenching realization forty years ago that peace was not to be had, that Europe lay victim to continued oppression and that war had come again in the Far East confronted the United States with a stark choice—to retreat again to our historic isolation or accept a global security role which ran against the grain of our democratic tradition. Having paid a bitter price several times in the 20th century for not being vigilant to threats to our national security, we resolved the issue in favor of accepting global responsibilities, and building the necessary forces to carry them out. Yet, in so doing, we developed four clear principles in meeting threats to our security in the post-War period.

First, we have structured our defense posture not for war, but to deter aggression. Deterrence, the cornerstone of our military strategy, is geared toward preventing an attack on the U.S. and on its allies.

Second, when we are challenged, we will respond—with force if necessary—to defend our citizens, our allies, our interests and our values. The "citizen army" will rise in anger and do its duty when called on. But its duty will be as it always has been: Response commensurate with the threat. Thus, we do not shrink from protecting our citizens by deposing tyrants such as Mr. Noriega and returning Panama to its people.

Third, we will honor our commitments to collective security, to partnership with nations who share our fundamental values. At the same time, we cannot expect our allies to entrust their security to our declaratory statements. Therefore, what we ask of them we ask of ourselves: To maintain forces that are capable and committed to defend the security of all alliance members.

Fourth, we will continue to adhere to the distinction as laid down in the Constitution between raising armies and maintaining navies. We are like an island astride two great oceans. To our east, our security commitments and economic well-being lie across the Atlantic; to our west our security commitments and economic well-being lie within the Pacific. You are all military officers, so what I will tell you is not novel: Naval forces can provide security to ourselves and to our allies. But there are two things navies cannot do: They cannot seize territory and they cannot, by themselves, win wars.

THE UNITED STATES ROLE IN NATO

Although the idea of collective security is global, it took root first in Europe. Yet, our first steps on the road to collective security did not come easy. The Truman administration did not seek the creation of the NATO alliance. We endorsed membership in NATO because we understood that nations come together for one of two purposes: Either common values or common threats. In the late 1940's we and our West European allies shared both.

In May of 1945 the guns fell silent across Europe. But the instruments of war were replaced by the instruments of coercion. Throughout the capitals of Eastern Europe the liberated became the occupied. And in those bleakest of times—of political subversion in Prague and military pressure in Berlin—European leaders stepped forward. Their backgrounds were diverse: Ernest Bevin, a union industrialist from Britain, Robert Schuman, a political economist from

France, Paul Henri Spaak, a lawyer from Belgium, and Halvard Lange, a history teacher from Norway. But their vision was the same: Collective security, to rid a war-ravaged Europe of the fear that two World Wars were but a prelude to another threat: One that could extinguish their liberties, their common heritage and their lives.

We could not turn our backs on the continent that had been the birthplace of the enlightenment ideals which infuse our Constitution—and our doctrine. And so we responded. We did not use Western Europe as a security shield; we extended a security shield over Western Europe. Western security was then—and remains now—indivisible.

NATO'S MILITARY POSTURE

If the soul of collective security is shared values, the body is shared risks and responsibilities. And here let me focus on how the United States, its principles and its military doctrine support collective security in Europe. There are six distinct tenets that frame the American role in NATO. Some are subsumed under the title of "doctrine." Others transcend purely military concepts and speak to the very essence of collective security.

What are these six tenets?

First, we consult. We do not impose our views or our military strategies on the alliance. Consultations are fundamental to the existence of NATO. Democracies by their very nature are quarrelsome. We argue, we debate; and our disagreements take place under the glare of public scrutiny. But in the end we emerge strengthened, not debilitated, by this open process. Moreover, this exchange guarantees the defensive character of our common cause. It is inconceivable that an alliance whose posture and purposes are subjected to such intense public scrutiny in sixteen democratic societies could ever undertake aggressive military action.

Second, the United States supports the notion of collective defense: To defend collectively against a threat so great as to overwhelm the defenses of individual States. That is why the American people accept the permanent stationing of our forces abroad despite the costs entailed. The first Chairman of the Joint Chiefs of Staff, General Omar Bradley, supported the return of American troops to Europe, so that as he said "There will be no chance for doubt of American interest in the defense rather than the liberation of Europe."

To this day, the central concern of our alliance remains the specter of confronting greatly superior forces armed, trained and suited for offensive ground operations. I hasten to add that we are enormously heartened by the declarations and initial evidence of an historic redefinition and restructuring of Warsaw Pact doctrine and forces to a defensive posture. The prospects posed for rapid advances in arms reductions, and indeed for a wholesale readdressal of European security arrangements, given renewed hope for finally settling the divisive legacy of the Second World War.

Third, the American commitment to NATO is based on forward defense. This NATO commitment to preserve territorial integrity at every potential point of attack is central to shared burdens and responsibilities. It also explains the NATO strategy of bringing force to bear on successive echelons of attacking forces, because NATO's disadvantage in crucial force ratios will not permit successful defense against unattrited waves of heavily armored forces. Under no circumstances, however, does this imply the alliance's intent to invade and seize territory. An alliance which under the best of circumstances still finds itself in the position of military inferiority, does not have the option to think in terms of offensive strategies. Offensive strategies are morally and politically untenable to the spirit and character of the NATO alliance.

Fourth, America remains committed to the strategy of flexible response. The very nature of flexible response is to provide a credible deterrent, and, failing that, to be able to halt hostilities quickly and restore the status quo. This requires a wide range of capabilities from conventional through nuclear.

More than twenty years ago NATO decided to incorporate nuclear weapons into its defense. At the same time all of us in NATO have worked to ensure that their numbers were commensurate with both alliance conventional capabilities and the climate of mutual security. Thus, happily, we have significantly reduced the numbers of nuclear weapons in NATO arsenals, both unilaterally and through negotiations, over the past several years. Finally, as agreed by our senior civilian leadership last May, we are prepared to enter into further negotiations to reduce nuclear weapons as soon as the promise of the CFE talks is achieved.

Fifth, American troops are not occupying forces. As President Bush has said, American troops will remain in Europe for as long as they are welcomed by the governments and publics of Western Europe, and as long as the collective judgement of the alliance decides that they continue to be needed.

Sixth, U.S. forces and interests do not dictate the military management of the alliance. We act as an alliance. Our soldiers train within the context of NATO. My first command 32 years ago was as a NATO lieutenant in charge of forty soldiers astride the Fulda Gap. Today, four of the eight combined commands within the NATO alliance are led by European officers. At the highest echelons, we have effectively integrated democratic political procedures and military decision making. Our staffs have come to think in common terms and develop common solutions to military issues. Most importantly, in the field, from senior commanders to the youngest soldiers, we train and exercise with the unity inspired by shared values and nobility of purpose.

We follow these six tenets because our allies believe in them and the American people support them. The roots of American defense policy run deep. For over two hundred years the American people have supported their military when there was a crisis necessitating a U.S. response. I stress the word, "response." Military power built around the notion of offense, of initiating conflict and seizing territory, is contrary to the laws, the spirit, and the tradition of America.

THE FUTURE

I spoke earlier of western values. In Malta, President Gorbachev stressed that these are universal values. He is right. We have never claimed them exclusively for ourselves.

Today we are witnessing significant changes in the Soviet Union and Eastern Europe; changes that can help increase the security of all the participating States in CSCE. We are heartened by the reductions and withdrawals of Warsaw Pact military forces that have taken place, as well as Soviet statements that policies of coercion—such as the Brezhnev doctrine—are relics of the past.

But there is more at work here in Europe than military reductions. President Gorbachev has spoken of democratization. The changes taking place in the Soviet Union are without precedent. Throughout Eastern Europe we see dramatic movement toward political pluralism. For the United States—as for any democracy—glasnost—public discussions and debates over military strategy and programs—is as important as perestroika. For through real glasnost, national security and military policies will no longer be the purview of the few, but the responsibility of the many.

Americans have demonstrated over the last forty years—indeed throughout their history—that they will respond to challenge. So too do Americans stand ready to seize opportunities. President Bush has committed the United States to move beyond containment. That is why we are negotiating conventional reductions in this city. That is why we are continuing—indeed accelerating—the trend toward lower defense expenditures and reduced force levels.

There is nothing sacrosanct about the number of American troops stationed in Europe. There is nothing carved in stone that says that military power in a divided Europe should remain as it has over the last four decades. The United States welcomes the changes all around us. We are hopeful that the process in which we are all engaged will lead to the day when the military demands on both European alliances are greatly diminished. Above all, we are hopeful that the dream of a peaceful community of democratic nations sharing universal values, a dream that has been kept alive in both East and West, will become a reality.

Both within and outside the CSCE process we are devoting our efforts toward reducing tensions, reducing military forces, eliminating barriers, and restoring confidence between States. Today, I know I share with each of you the sense that East and West have reached a common conclusion that the era of confrontation in Europe must end. The spirit of democracy is pervasive on this continent. Sharing in this vision, we can all work together to usher in a new era of European peace, security and freedom.

CONCLUSION

In the course of this seminar you will hear my colleagues go into greater depth on American policies and doctrine. Major General Robinson will describe in detail how we design our policies and force structure to achieve the national security objectives assigned to us by the American people. Assistant Secretary of Defense Chu will describe how we obtain funds for our defense forces from an expert, demanding, suspicious Congress performing its constitutional role. General Leland will outline how U.S. forces in Europe conduct their training in support of our collective security responsibilities.

At the end of our presentations I hope you will be convinced of the defensive nature of our doctrine. You will see that we are a superpower with worldwide responsibilities. You will see that our forces exist to protect our values, not to impose them. You will see that we are determined to pay whatever is necessary to preserve our freedom and the freedom of our friends. You will see that no nation committed to the ideals of this conference need fear the United States.

This is an historic meeting and much is expected of it. I look forward to hearing the presentations of my fellow chiefs of defense.

DITCHLEY CONFERENCE ON POLITICAL AND ECONOMIC REFUGEES

Mr. KENNEDY. Mr. President, some weeks ago the distinguished Ditchley Foundation of Britain sponsored a high-level conference at Ditchley Park outside of Oxford, England, to review the issue of political and economic refugees and the growing, worldwide problems of migration, asylum, and resettlement.

As a major immigrant and refugee receiving country, these are issues the United States has grappled with repeatedly. But we are not alone, and the problem is increasingly international in scope, affecting both developed and developing countries.

Refugees are on the move in every region of the world, and their most significant impact is largely on Third World nations who can least afford to bear the burdens they represent. And migration is not only from the less developed countries to the West—to Europe and the United States; illegal migration is a problem for developing countries as well.

How the international community responds to the differing character, and conflicting needs, of refugees and economic migrants, while still protecting political refugees, was the theme of the Ditchley conference. This past week, the conference rapporteur distributed an essay reflecting the discussions and conclusions of the conference, making some important observations as well as offering some very concrete recommendations.

Mr. President, the growing movement of people around the world—the plight of refugees, the needs of migrants, and the push-pull behind economic migrants—will be with the international community in increasing numbers in the years ahead. So, too, will the burdens they represent, and the questions of equity, fairness, and protection associated with this human tide.

For these reasons, I would like to share with my colleagues and readers of the RECORD, the essay on the Ditchley conference on political and economic refugees and therefore ask unanimous consent that it be printed at this point in the RECORD.

There being no objection, the essay was ordered to be printed in the RECORD, as follows:

POLITICAL AND ECONOMIC REFUGEES: PROBLEMS OF MIGRATION, ASYLUM AND RESETTLEMENT

(By R.J. Vincent)

(An essay on a Ditchley Foundations conference held at Ditchley Park, Oxfordshire, England on the weekend of October 13-15, 1989.)

I. INTRODUCTION

The Ditchley conference on refugees met as the movement of East Germans to the Federal Republic of Germany via the neighbouring countries was capturing the newspaper headlines. Shortly after the conference broke up we read in the same headlines of the resignation of the United Nations High Commissioner for Refugees and of the British proposal forcibly or, at all events mandatorily, to repatriate Vietnamese refugees encamped in Hong Kong. One of our conference themes, namely the extent to which the question of involuntary migration was one of the great issues of our time, was thus given an affirmative answer in the world outside Ditchley if newspaper coverage is the criterion.

At Ditchley, however, our concern was not with what happened to be in the news, but with the many sides of the refugee problem, not least in those parts of the world which, not being directly connected with western or northern preoccupations, featured less prominently in our press. (The problem of Mozambican refugees in Malawi was dealt with at the conference as a case in point). More than one participant at the conference noted, in this regard, the extent to which the refugee problem was a Third World and not a First World one from the point of view of both senders and receivers. For while many Third World refugees might aspire to resettlement in the West, and to keep this aspiration alive in their countries of first asylum, the reality for most of the world's fourteen million or so refugees was not safe transmission to comfortable resettlement, but the grim prospect of an indefinite stay in crude camps across the border from the country they had fled.

The questions we asked ourselves at Ditchley ranged from those concerned with the root-causes of refugee and other population flows, to the sorts of problems refugees raised for the "international community" (a term whose meaning was not always clear), to the rights of refugees and other kinds of migrant and the duties these rights imposed upon others, to the responses outsiders do and should make to the question of involuntary migration. We also discussed particular institutions like the United Nations High Commission for Refugees, and particular conventions like the Refugee Convention of 1951 and went into the question of their improvement.

This conference did not, as some Ditchley conferences do, come up with a series of prescriptions for the international community in the form of suggestions regarding the creation of new institutions or other instruments. But it did deal illuminatingly with questions of definition, with the practical problems associated with the various features of the refugee question, and with the areas in which improvement of the régime was particularly important. The mood of the conference was one of realistic awareness of the limits of the possible, rather than one of making expansive demands on a minimalist system.

II. THE PROBLEM

Migration, the movement of population from one point on the earth's surface to another, is not a new phenomenon. The history of human habitation of the earth can be told in terms of it. And it has taken place for many reasons, from the search for new pastures to the sack of Rome. We talk now of push factors and pull factors prompting migration. Push factors like persecution, war and famine drive populations out of their homelands. Pull factors, like higher standards of living or apparently freer communities, pull people away from their homelands. And, of course, repulsion and attraction have often worked in harness.

Migration, voluntary or involuntary, becomes a problem between societies when populations on the move run into others. In contemporary international society, where the habitable land-surface of the globe is completely covered with nation-states, movement of people out of their state is bound to involve movement into the jurisdiction of another state. (We noticed, more than once at the conference, that there was also such a thing as internal migration, which might be quite as significant from a demographic point of view as external migration, but it was external or international migration that we had met to discuss). States have attempted to control international migration by means of immigration and refugee regulation, the former dealing with the ordinary principles of admission, the latter with the extraordinary. Roughly, if you are pulled you are an immigrant, and if you are pushed you are a refugee. Also roughly, the point of distinction between immigrants and refugees was to establish an orderly queue for admission while setting up acceptable criteria in terms of which the queue could be jumped in exceptional circumstances. The preservation of the distinction became a theme of the conference. No one thought it wise to collapse one category into the other, and several thought that an expansive definition of a refugee would do just this.

The principle which seems to underlie both immigration and refugee law in modern international society is that which endorses the legitimacy of the sovereign nation-state. Ordinarily, according to this principle, most people, most of the time, wish to remain within the population in which they were born and brought up. There are exceptions to this, people who for one reason or another wish to migrate, and immigration law is designed to respond to them. And there are dramatic exceptions to it when, for one reason or another, individuals, or groups, or even whole nations, seem driven suddenly to seek a welcome abroad. Refugee law is designed to respond to these. The difference between them is that whereas immigration law is concerned with the ordinary exceptions to the 'nationality principle', and has as its objective permanent resettlement in a new state (carrying with it thereby a new nationality but not a new nationality principle) refugee law has as its objective the return to the normal nationality-distribution when the crisis is over. So while nonrefoulement, or non-return is the great principle of a refugee policy while the crisis which led to the refugee flow continues, it should no longer apply when the crisis is over. Thus voluntary repatriation (but with some assurance of a non-hostile reception) comes traditionally at the top of the list of the refugee agencies' objectives, (see Note 1) then temporary safe-haven, and only third the prospect of permanent resettlement on all fours with ordinary immigrants. It is a commonplace to point out the centrality of the nation-state in everything; in relation to refugee law the commonplace explains the hierarchy of objectives. It might also explain the place of such rather questionable strategies as 'humane deterrence' whose purpose it is to eliminate the pull factor from the decision-making of the potential refugee. Humane deterrence is designed to leave people where they are with their received nationalities. This rationale continues into other responses to the refugee problem that were discussed at the conference. For example, the idea that sender states should be made to 'pay for their sins'

in causing refugee flows, accepts that states can sin at the same time as accepting that nevertheless they retain their authority and can be held responsible for those actions. Also, the related idea of improving the human rights record of sender states to make it less likely that they will become the source of refugee flows, presupposes the legitimacy of the nation-state arena within which human rights are to be observed. But mention of human rights opens up an alternative perspective which we shall return to in the conclusion.

The rationale, then, behind the international response to the refugee problem is such as to treat the problem as in principle something temporary. Refugees are on the way to becoming something else, either nationals of a new state, or nationals of their old state domiciled again at home. This exposes one of the central problems of refugees, debated at the conference, as to whether to treat them as people requiring temporary humanitarian protection (the UNHCR approach) or as people whose supposed temporary plight looks fairly permanent and should therefore be treated as a development problem (the Refugee Studies Programme approach). We did not resolve this question at the conference but it was an issue to which we often returned. Refugees break open the conventional categories, and the international community, with a certain lack of imagination, seeks to return them to the categories against which they protested.

III. DEFINITION

Ditchley conferences are often dogged by definition, especially when lawyers are present. But as more than one participant pointed out, in this instance, definition had more than an academic significance since policy depended on it both in the sense of following the legal rule, and in the sense of relying for its success on a well-drafted definition.

We began with the 1951 Convention definition. A refugee is a person outside his or her own country who 'owing to a well-founded fear of being persecuted for reasons of race, religion, nationality, membership of a particular social group or political opinion', is unwilling to accept the protection of his or her country or return to it.

There are difficulties with this definition which participants were not slow in pointing out.

The first group of difficulties was with the concept of persecution. The idea of what constituted persecution shifted over time. Persecution seemed to be an act of commission, but some wished to have it include acts of omission (the failure to protect). Persecution might have an economic aspect as well as a political one which might stretch the conception of a Convention refugee beyond manageable limits.

A second group of difficulties lay with the list of grounds on which persecution was based. Since it was not exhaustive, some participants worried that it might allow governments to refuse asylum on some rather spurious technical ground such as that the particular kind of persecution was not mentioned in the Convention.

A third difficulty arose from the rather important practical observation that a person with a well-founded fear of persecution might not qualify as a refugee if he or she had not been able to escape his or her country across the border or into a foreign embassy.

Although there were difficulties of this kind with the definition no one at the conference wished to reject the Convention definition and start again. What did emerge from the discussion was a majority, it not a consensus, in favour of a three-fold conception of the 'refugee phenomenon' for which there was also support in practice and in academic writing:

1. A narrow band of Convention refugees, the unambiguous victims of persecution, whose rights as refugees triggered an obligation on the part of receiving states to trump their ordinary legislation on immigrants.

2. A broader band of non-Convention involuntary migrants who could not claim to be escaping persecution, but who were driven out by war, civil disorder and the like. Reference was made here to the OAU Convention on Refugees whose wording was more generous than the 1951 Convention. However, the majority view here was that while life-threatening violence might lead host-states to be sympathetic to a claim for asylum, there was no general legal obligation binding them to accept it.

3. The broadest band of economic migrants who might be successful in making a bid for admission to a host country but did not do so either on the basis of a legal right or of a moral claim of the kind acknowledged in (2) above.

This three-fold categorization did not dispose of our problem. There remained, for example, a 'grey area' (a popular conference notion) between category (1) and category (2) in relation to the idea of economic persecution, and between category (2) and category (3) in relation to economic deprivation. But it was acceptable as a basis for discussion.

The reason for a tough-minded adherence to category (1) as the only class of refugees properly so-called was forcibly expressed by several speakers. If the legitimacy of a category which falls short of full refugee recognition is acknowledged, then states will be tempted to use this category even when the stronger category is justified, thus diluting the legal obligation to those most in need. Thus the 'restrictionist' interpretation of the Convention as good public policy was defined by reference to the quality of the obligation that was thereby honoured. It was then buttressed by the observation that the principle of equity was best served by seeing to it that the queue of immigrants was jumped only by deserving cases. If less than completely deserving cases were allowed through the turnstiles first, then the whole of immigration policy was placed on a less reliable footing, and both order and equity suffered. The consensus of the conference was that it was desirable to preserve the distinction between refugee and immigration policy, though there was an anxiety, to which we shall return in the conclusion, regarding the kind of 'order' and 'equity' that preserving the integrity of this distinction might be said to imply.

III. 'CONVENTION REFUGEES'

Compliance by states with the Convention was thought to be less than satisfactory. There were a number of reasons for this. A 'restrictionist' interpretation of the Convention, however desirable in principle, did create rigidities in the system which made queues of refugees much longer than desirable. The application of refugee law, moreover, was notoriously politicized, and the tendency of the United States, for example, to assume that migrants from communist countries must qualify as refugees because the system they were leaving was one which institutionalized persecution, was noted as a rather blanket response which brought the discriminatory character of the refugee régime into disrepute. Also, it was suggested that the disagreeable measures associated with 'humane deterrence' (which, it has been observed, would not deter if they were humane), such as prolonged detention and interdiction en route to safe haven, made it difficult for individuals and groups to test the applicability of the Convention to their own cases in their chosen countries of asylum.

Modes of improving compliance at three levels were discussed.

At the international level, the level at which international institutions operated in the matter of the interests of refugees, neither the enhancement of the office of the United Nations High Commissioner for Refugees, nor an enlargement of the role of the International Court of Justice was thought likely to bear much fruit. Certainly the UNHCR could do what it was doing much better, and especially if it raised more funds from the states whose financial support would then demonstrate their faith in the institution. But this would not solve the problem of the principles on which it ought to act. And because UNHCR was in the pockets of states, action at state level, to which we shall shortly come, was thought to have more potential. Similarly in regard to the International Court of Justice, it was thought that greater use could be made of the Advisory Opinion procedure, but this would not constitute a radical departure from the Court's established practice and was not therefore likely to cause dramatic change.

At the regional level, where, it was pointed out, the bulk of the problem presented itself and where the chief response should therefore be made, our discussion dealt mainly with the opportunity that 1992 presented to Europe for the development of a regional policy of asylum-adjudication.

At the national, or state, level, we looked at senders and receivers. More attention, it was suggested, should be focused on refugee-generating countries. The connection should be made clear between human rights violations, or consistent patterns of these, and the generation of refugee flows. The obligations of states in regard to both human rights and refugee law should be clarified. And consideration should be given to making habitual refugee-sending countries pay for what should be considered a delinquency. Some of us even went so far as to sanction outside intervention into the refugee-sending countries in order to eradicate the source of the problem, though this was not a view that commanded a consensus—especially given the strongly-stated objection that the location of delinquency was not in many instances obvious. Refugee flows, it was emphasized, might be the result of intervention as much as a cause of it, and any pattern of flow might be the result of several causes. In view of this it was dangerous to go in for a general hunt for a particular malefactor.

As regards receiver states, the strategies for improving compliance with the Convention were different. Here it was suggested by some that it was necessary as far as possible to detach asylum decision from the vagaries of foreign policy, so that individual cases were dealt with on their merits according to refugee law rather than at the whim of governments. The Canadian practice—through its Immigration and Refugee Board—was commended in this regard.

Strategies of shame, associated with the activity of Amnesty International on human rights, were discussed as being applicable to

both senders and receivers: to senders so that they would be disgraced in the eyes of other states and before world opinion generally; to receivers in order that they dealt properly with claimants, according to the Convention and without discrimination, the audience here being again domestic and international opinion.

A theme that ran through the discussion of Convention refugees, and of involuntary migration generally, was the connection between the human rights régime and the refugee régime. More than once we returned to the idea that violations of human rights were a contributory cause of refugee flows. In this regard the international community had an interest in each of its members' human rights record whatever its obligations in respect to the rights of individuals within their jurisdiction. This interest consisted in doing as much as possible to prevent refugee flows prophylactically by inhibiting the spread of the conditions in which they were likely to occur. But from the point of view of receiver states this connection between human rights and refugees was more problematic, because it raised the question of the obligations states owed to individuals and groups, not to other states. If receiver states were to refer, not to emergency refugee law to decide on who should jump the immigration queue, but to human rights law, for example, the obligations they might be said to owe in respect of every individual's freedom of movement, then the stampede would kill the gatekeepers of sovereignty.

IV. NON-CONVENTION REFUGEES

Non-Convention "refugees", "temporary refugees", "displaced persons"—the conference did not agree on a label—were, it was agreed, in terms of sheer numbers a bigger problem for the international community than Convention refugees. We did not come up with a new definition for them, but recognized the existence of a category, between Convention refugees and economic migrants, composed of people who left their countries under some form of pressure but could not call it persecution. Famine, flood, earthquake, fear of generalized violence, civil wars, might each lead to involuntary migration. Some, even most, of those people finding themselves in this position might accurately be described as fleeing violation of their human rights. But since this was a much broader category of infraction than that recognized under the Convention they did not enjoy protection under this instrument and were supplicants to an international community relatively quick to recognize abstract and general rights, but slow to concede concrete and particular obligations.

What was to be done about this category? We kept calling it a "grey area" category at the conference, a twilight zone between the night of economic migration and the day of Convention refugee status. But it is by now a fairly well-established "grey area" in virtue of the existence of which the High Commissioner for Refugees acknowledges some responsibility for the provision of humanitarian treatment under a co-ordinated international effort. (See Note 2).

At the conference we were quick to see the difficulties in dealing with this grey area. "Humane deterrence" did not apparently deter, and if it was humane it couldn't. Thus, for example, in Hong Kong, the Vietnamese "refugees" continued to arrive despite the disagreeable circumstances in which they did and could except to arrive. Resettlement of a temporary or permanent nature in countries of first or subsequent asylum was unlikely to be easier for these migrants than it was for strictly Convention refugees. Forcible repatriation went against the humanitarian grain when there was no evidence that the situation which led to migration had improved. And even induced 'voluntary' repatriation was subject to the same criticism.

In view of these difficulties, the suggestion was made at the conference, though it was not a suggestion that commanded a consensus, that the international community could attempt to clear up this category in a new international instrument. The objection to this was that it was relatively easy to get states-members of the international community to go along with the passing of 'soft law', but much harder to get them to honour their obligations to it, even the obligations that they had already in principle conceded.

This took the question back to the practical policy of the states which were the gatekeepers seeking to control global population flow. In practice, it was pointed out, they were capable of a very liberal interpretation of what a 'refugee' was when it fitted their interests to admit individuals or groups from countries whose régimes were taken, almost by definition, to be on the edge of persecution of all their citizens. The problem for a humanitarian refugee and immigration policy was to make this category consistent as well as expansive: consistent in that it allowed the admission of anyone who triggered its mechanisms wherever they were from, expansive in that it should be part of the refugee policy to increase the supply of asylum to meet the increasing demand for it. In regard to consistency, the point was heard again in this context that non-governmental agencies like the Canadian Immigration and Refugee Board might play the gatekeeper's rôle more humanely than governments. Though it might be argued against this that the problem of domestic support for a liberal immigration policy confronts whatever agency is empowered to undertake it.

V. CONCLUSIONS

The conference sometimes had the air of a convention of lawyers trying to tidy up the edges of a problem whose centre was political and beyond them. But there was a more profound difficulty for us, namely that two different moralities confronted us all, both of which had an authentic anchorage in the Charter of the United Nations. The first was the morality of the non-interventionist world of states, according to which the treatment of individuals was fundamentally a domestic question which outside powers took account of only in emergencies such as when refugees were generated and presented a practical problem at the doors of other states. The second morality was the inclusive morality of all humankind according to which individuals in world society encounter each other directly as bearers of rights and duties or in lawyers' language as themselves subjects of international law. The problem of refugees and involuntary migration is a problem in which claims derived from the second morality are presented in the world constructed by the first, and their reception there has been predictably inhospitable.

In this first morality refugees and involuntary migrants are a problem because they confront established sovereign arrangements for populations. And they remain as a problem for admission and resettlement no matter how much of a humanitarian insistence there is that refugees can in the long-run be contributors to host societies and not a burden on them. Hence the dominant idea of equity at the conference, according to which receiver states did the best they could to make fair arrangements for the queues of claimants lining up at their frontiers. The alternative view, which doubted the morality of the distribution of populations to sovereignties in the first place, and which, in addition, placed responsibility for refugee flow as much on global as on local politics, was less confident about the underpinning rules for the handling of population movements.

But the message of the conferences was not of this highfalutin' theoretical kind. Its concerns and findings were low key and practical: a more effective, better-funded better-led United Nations High Commission for Refugees; states which made more practical and more humane arrangements for the screening of refugees; improved monitoring and better information about refugees carried on by an Amnesty for Refugees which could then adopt effective strategies of shame along the lines of the model institution; not new international instruments and institutions but making the old machinery work better; the attempt to detach refugee policy from the day-to-day preoccupations of international politics.

In the end, the conference participants did not live in a different world from the political one in which they, some of them, took a direct part, and they had a practical message for politicians which can be illustrated by reference to Kampuchea, to which case we often referred. Human rights problems, of a profound kind, which are ignored in a particular state today, might present difficulties for the whole of the international community tomorrow. The Western policy of resigned power politics conducted towards Kampuchea might be said to have been complicit in the resultant worst of all possible worlds, so that a debased *Real politik* can reap only what it sows. A consistent foreign policy, which took human rights to be one of its interests, might make the outcome less bankrupt. In this regard refugee policy and human rights are rather firmly connected.

The conference recognized its distance from day-to-day refugee problems in the front-line, namely in Malawi, or Pakistan, or Thailand, or in Hong Kong where first asylum meant for those countries burden-bearing rather than the burden-sharing which was a slogan in the West. But it also recognized the political realities in the countries where resettlement was most desired, and from which most of the participants came.

CONCLUSION OF MORNING BUSINESS

The PRESIDING OFFICER (Mr. KOHL). Morning business is closed.

CLEAN AIR ACT AMENDMENTS, 1989

The PRESIDING OFFICER. The Senate will now resume consideration of S. 1630, which the clerk will report.

The assistant legislative clerk read as follows:

A bill (S. 1630) to amend the Clean Air Act to provide for attainment and maintenance of health protective national ambient air quality standards, and for other purposes.

The Senate resumed consideration of the bill.

The PRESIDING OFFICER. The Chair recognizes the Senator from Rhode Island [Mr. CHAFEE].

Mr. CHAFEE. Mr. President, yesterday I was giving my opening statement in connection with our clean air legislation and I stopped in the area where we are dealing with nonattainment.

If I might just briefly review the bidding, nonattainment are those areas in the country that have not achieved the standards for area cleanliness, the minimum standards that are set forth by the Environmental Protection Agency.

Furthermore, in those areas that have not met attainment standards, proper clean air, there are four categories, based on the more clean, which are the moderate; the serious are less clean; the severe are some seven cities in the country which constitute the severe category; and one city is in the extreme category: Los Angeles.

I described briefly what the bill does in order to achieve attainment. These areas that are in nonattainment, that do not meet the health standards—and by the way, Mr. President, we are talking health here. That is what this is all about. It is a health problem. That is where we are wrestling with clean air difficulties, trying to restore clean air to our Nation. The principal reason is a health one but, in addition, there are environmental problems that arise in these nonattainment areas of the country.

To continue my discussion, if I might, with the nonattainment section of the bill, the bill imposes certain requirements everywhere in the region, whether or not a particular portion is in a nonattainment area, because emissions from everywhere in the region contribute to the high ozone levels that are experienced from Virginia to Maine. Unless controls are consistent in areas downwind of nonattainment areas like those in my own State of Rhode Island, no level of control in a single, isolated nonattainment area will be sufficient to bring that area into attainment.

Let me note one last provision related to ozone. Currently, OCS facilities off the coast of California and in the Gulf of Mexico are not required to meet the same emissions requirements that similar facilities onshore must meet. The result in California has been that emissions from the OCS have affected the ability of onshore nonattainment areas to reduce emissions sufficiently to meet the Federal air quality standards. To address this problem, the committee bill transfers authority for control of OCS air pollution from the Department of the Interior to EPA and requires EPA to mandate the same controls as would be required if the facility were onshore.

The carbon monoxide and particulate matter—or PM-10—provisions in the bill are similar in structure to the ozone provisions. That is, areas that have failed to meet either the CO health standard or the PM-10 health standard are separated into categories—in each case, two categories—and each category is assigned control requirements and deadlines of no later than 5 or 10 years to meet the health standard. Milestones of progress are required.

For all nonattainment areas, the bill prescribes consequences or sanctions for areas that fail to meet certain requirements. For areas that do not submit acceptable plans to implement the requirements of the law or that fail to implement the measures that were proposed in the plans or to meet interim emission reduction milestones, the bill requires the Administrator of EPA to prohibit construction of new sources that will emit pollutants that contribute to nonattainment. The Secretary of Transportation is also directed to approve only those highway projects, defined in the bill, that will improve, rather than diminish, air quality.

Areas that fail to attain the ambient air quality health standard by the deadline established in the bill are moved into the next higher nonattainment category, with all the requirements of that category. And for ozone areas that fail to meet a deadline, major stationary sources of VOC's are required to reduce VOC emissions by 50 percent below emissions in the year of the deadline or pay $5,000 for each ton above that 50 percent level.

These provisions are designed to achieve emission reductions or, at least avoid emissions increases, in areas that have shown either that they cannot carry out an acceptable control program or that the program is not working as it was designed to.

MOTOR VEHICLE PROVISIONS

One of the primary reasons areas have failed to attain the ozone and carbon monoxide health standards are emissions that come from motor vehicles. Motor vehicles are responsible for 70 percent of CO emissions nationwide and about 90 percent in urban areas. Cars and trucks contribute about 45 percent of VOC emissions and 35 percent of the NO_x nationwide and are responsible for about 50 percent of the ozone in urban areas. Unless emissions from vehicles are further reduced, ozone and CO nonattainment areas are unlikely to achieve healthy air.

There have been major improvements in control of emissions from cars. New cars today emit 96 percent less CO, 96 percent less VOC's, which are also called hydrocarbons, and 70 percent less NO_x than cars produced before 1968. Because the performance of emissions controls deteriorate in use, however, the overall reductions from precontrol cars are less than for new cars. But great progress has been made, and it is progress that was said by the automakers in 1970 to be unachievable. To their credit, they have proven themselves wrong.

Much of the gain that has been achieved by reducing each car's emissions, however, has been lost because there are more vehicles traveling more miles each year. The national increase in vehicle miles traveled—or VMT—has been about 2.7 percent per year during the 1980's. At this rate, VMT will increase 30 percent between 1990 and 2000 and almost 60 percent by 2010.

With increased VMT comes increased pollution. Because new, cleaner cars are still replacing less well-controlled cars, emissions from vehicles are going down. This trend will continue until approximately 1997 or 1998, when almost all cars on the road will have the latest generation of controls, but VMT will continue to rise and pollution will begin to increase. At current VMT rates, pollution will be back to 1989 levels by about 2005 and will rise from there unless additional emission reductions have been achieved by vehicles.

Unless we plan ahead now for future improvements in vehicle emissions, we will be, once again, behind the curve. For one thing, auto manufacturers need to know what standards they must meet several years before they are required to produce the improved cars. And then it takes 6 or 7 years for half the fleet on the road to be replaced by the cleaner vehicles. So we are talking about at least 10 years from the time a new emission standard is put into law before the air gets any significant benefit from less-polluting vehicles.

Title II of the committee bill requires several measures to reduce pollution from vehicles. First, it requires a 40-percent reduction in hydrocarbon emissions and a 50-percent reduction in NO_x emissions, beginning in 1993. Then beginning with cars manufactured in 1995, it requires those reductions to be achieved throughout the entire life of the car, that is, for 10 years or 100,000 miles. Currently, emission control systems can be designed to last for only 50,000 miles or 5 years, roughly half the usual life of a car.

California has already put in place regulations requiring the same emissions reductions that are in the committee bill, but gives manufacturers a phase-in period from 1993 to 1995 to meet them, and relaxes the standards slightly for the second 50,000 miles or 5 years. The California Air Resources Board has stated that the requirements in the committee bill are feasible.

Second, the committee bill requires a second round of reductions in tailpipe emissions. In 2003 cars would be required to reduce hydrocarbons, NO_x, and CO by 50 percent from the 1993 levels. Again, the California Air Resources Board, leading experts in vehicle emissions control programs, has testified that the requirements are feasible, given the long leadtime. In fact, California has adopted, in principle, tailpipe standards that are tougher for hydrocarbons and as tough for NO_x for the year 2003.

Further evidence that the second round standards are not infeasible is the fact that 30 of 85 vehicle models certified in 1988 were certified at the levels required by the committee bill in 2003. The committee did not adopt the second round standards believing that certifying a vehicle is the same thing as being able to produce a vehicle that will meet those standards for 100,000 miles, but the data does suggest that the standards are achievable, given a 13-year leadtime.

The California Air Resources estimated that the cost of the second round provisions in the committee bill would be approximately $125 above the cost of the 1993 standards. This cost estimate is an important figure, since one of the biggest additional costs of the committee bill compared to the President's bill, as calculated by the administration, is the second round of tailpipe standards. The administration's estimate of the cost per car is $500. The administration uses this cost-per-car figure to arrive at the conclusion that the committee bill is $8 billion more costly than the President's bill in this regard. If the California cost estimate is used, that difference is reduced by about $6 billion.

As a point of reference for debate about the costs of emissions controls, which I agree are significant, statistics from the Motor Vehicle Manufacturers Association show that in 1988 Americans spent a total of $346 billion on vehicle-related items. This includes new vehicles, repairs, fuel, and insurance.

Another control required by the committee bill is onboard canisters that will reduce emissions of hydrocarbons during refueling by 95 percent. The Office of Technology Assessment estimates that the cost effectiveness of the onboard systems is approximately $1,100 per ton of hydrocarbon. This is about the same cost as for stage II controls.

The basis for the committee's decision to include both onboard and stage II controls is illustrated by the OTA estimate that there will be no emissions reductions from onboard technology in 1994, because only a very few cars will have the technology in place that year. OTA estimates, however, that stage II will achieve a 2-percent reduction in that year. In 1999, onboard technology will achieve a 1.6-percent reduction but will not reach its full potential of 2.1-percent reduction until 2004.

The committee bill requires light duty trucks to meet tougher emissions standards, beginning in 1995. The control equipment for light duty trucks are basically the same as for cars, but because of the heavier weight and carrying capacity, trucks cannot meet the same standards as cars. Therefore, the standards are increased proportionately to account for the differences. It is important to assure that light trucks are adequately controlled, as they are increasing in numbers and in miles driven. In 1988 light duty trucks were 30 percent of total sales of light duty cars and trucks, up from 22 percent in 1983.

Emissions of hydrocarbons, NO_x, CO and particulates from cars and trucks, that is, vehicles that run on the highways and roads, have been significantly reduced over the last 20 years. The same cannot be said for nonroad vehicles such as construction equipment, locomotives, farm equipment and a host of other vehicles and engines. These are not negligible polluters. Estimates are that they contribute between 2.5 and 10 percent of VOC's, depending on the area, up to 13 percent of CO, and between 4 and 13 percent of NO_x.

The California Air Resources Board has begun a process to regulate these vehicles and engines that is scheduled to be completed within 2 years. The Environmental Protection Agency has done little or nothing with respect to these categories.

The committee bill directs EPA to categorize these vehicles and assess the pollution from each category. Categories are to be drawn as broadly as possible consistent with the need to issue control requirements that apply to the category. For each category that the Administrator determines makes significant contributions to ozone, CO, NO_x, or particulate levels, the Administrator is to issue standards that, to the maximum extent feasible, are to be as stringent as any standard for a comparable highway vehicle. In the context of the pollutants of concern, significant contributions need not be even 1 percent. Every feasible reduction of these pollutants is needed if all areas of the country are to achieve health standards and healthy air.

The committee consciously chose not to extend the preemption applicable to State regulation of motor vehicles to nonroad engines and vehicles. California, which has already moved far ahead of EPA, should not be prohibited or even discouraged from proceeding, and other States should not be forced to wait for what could be a lengthy period before EPA action if they find that regulation of these pollution sources would be a productive strategy to attain and maintain healthy air.

Mr. President, the committee bill proposes to regulate a pollutant that has not yet been regulated under the Clean Air Act. The bill requires that emissions of carbon dioxide from cars be reduced in two stages. Fleets of cars being manufactured today emit, on average, 340 grams per mile of CO_2. The bill requires each manufacturer to achieve a fleetwide average of 266 grams per mile beginning with the 1996 model year and 220 grams per mile in model year 2000.

An analysis prepared by the World Resources Institute shows that if vehicle miles traveled continue to grow at the same rate of growth as in 1980–86, emissions of CO_2 from vehicles will increase by 35 percent between 1986 and 2005. Even with the requirements in the bill for reductions in CO_2 emissions, if VMT continues to grow at its 1980–86 rate, CO_2 emissions from vehicles in 2010 will still be 3-percent higher than in 1986.

The Department of Energy, in an analysis of fuel economy standards that are roughly equivalent to the CO_2 requirements in the committee bill, has stated that the standards are achievable by domestic car manufacturers using technology available today if they "return to 1987 levels of size, performance, and luxury * * *."

Mr. President, the United States is responsible for almost 25 percent of global CO_2 emissions, and motor vehicles account for a quarter of U.S. emissions. CO_2 emissions from transportation sources in this country exceed total emissions from each of the following countries or regions of the world: Latin America, Japan, West Germany, the United Kingdom, South and Southeast Asia, or France. Reducing CO_2 from cars is both a real step in addressing global warming and an indication to the rest of the world that the United States is willing to act as well as talk.

Now for a moment I would like to talk about a provision that is not in the committee bill. The President's clean air bill proposed a program to move us toward cleaner cars and cleaner fuels. Some felt that the President's proposal favored one alternative fuel—methanol—over other possible alterna-

tives. Administration representatives have been working with Members of Congress to address those concerns.

The Environment Committee held a hearing on January 11 to examine a number of clean car and clean fuel proposals, one of which is a proposal that I have circulated. Committee members are working together to develop an amendment to present to the Senate. We are working to craft a proposal that will assure that the auto companies and oil companies cooperate in bringing the consumer a far cleaner car/fuel option than is currently available or likely to be achieved by the other provisions of the bill. The market for these cleaner alternatives will be the most heavily polluted ozone areas and fleet vehicles.

I am optimistic that we will be able to bring to the Senate a proposal that will complement the second round tailpipe standards that are already in the bill and that may well lay the groundwork for a new generation of cleaner-running vehicles that will make compliance with the other provisions of the bill easier for the auto manufacturers.

AIR TOXICS

Mr. President, now I would like to turn to title III of the bill which deals with air toxics.

The term air toxics or hazardous air pollutants refers to a large number of substances which can cause illness or death when released as air pollutants.

Several examples include benzene which is a potent cancer-causing substance that is a component of gasoline and is emitted by cars and trucks all across the country.

Mercury which accumulates in the tissues of fish and causes nerve damage in humans when the fish is eaten.

Chromium is a metal added to water in air conditioner cooling towers to prevent bacterial growth. Substantial cancer risks are associated with that use.

Styrene is the solvent in fiberglass used for boat building, and is another carcinogen.

The list is long and touches every major industry from mining base metals to making high-technology electronics.

Under the Superfund law, major manufacturers are now required to report their air emissions of 350 of these substances. The data is summarized in a toxics release inventory by EPA which showed 2.7 billion pounds of emissions in 1987. This is probably only about one-fifth of the actual total, since not all air toxics are covered and only major industries in the manufacturing sector of the economy must collect data. Ten billion pounds would be a better estimate counting other industry, cars and trucks and all the small sources.

The principal health effect associated with toxic emissions is cancer. EPA estimates that 2,700 cancers per year are caused by exposure to air toxics. That means that 190,000 of the Americans now alive would contract a cancer as a result of this environmental risk. One other Government agency, the South Coast Air Quality Management District in California, has made an independent cancer estimate for air toxics. They believe air toxics to be a more serious problem. If their estimate of the risk is correct, 500,000 of the Americans now alive would be expected to contract cancer as a result of air toxics.

The overall number of cancer cases is only one dimension of the problem. Over 2,000 cancer cases is not large in the context of the half million people who die of cancer each year. But another dimension of the problem is that the risk is not spread evenly. Those living near large chemical plants or in concentrated urban corridors face much higher risks than most Americans. So, it is also an equity issue.

And it is not just cancer. These substances also cause kidney and liver damage, blindness, nerve damage, birth defects, genetic mutations and reproductive disorders. The extent of those health effects have not been quantified by any Government agency.

Air pollution has also become a principal source of water pollution. Eighty percent of the toxics in Lake Superior and 50 percent in Lake Michigan is fallout from the air and not from sewage or industrial discharges to the lakes or the watershed.

There is a large island in Lake Superior called Isle Royale. It is essentially a wilderness area. There is a lake on that island which is not connected with the waters of Lake Superior in any way. This is the remote undeveloped area where there has never been industrial or commercial activity. Nevertheless, scientists find high levels of PCB's and the pesticide toxaphene in the waters of this isolated lake. The pollutants can only have come from the air. The toxaphene must have been transported hundreds of miles from locations in the South where it was used as a pesticide on cotton.

Mercury has also become a significant water pollutant in the Great Lakes region. Mercury bioaccumulates in the tissue of fish and may affect organisms all up the food chain including waterfowl and man. All of the lakes in Michigan are posted with warnings. Pregnant women and children shouldn't eat the fish at all. Healthy adults should not have more than one meal of fish per week.

Over 200 lakes in Minnesota are posted with mercury warnings. Ninety of Wisconsin's 300 lakes carry warnings. Lakes in several other States are also affected. This mercury comes from powerplants and municipal incinerators and is deposited in these lakes from the air.

EPA is authorized under the current Clean Air Act to regulate these pollutants. But the program has not worked well. In 20 years EPA has listed only eight pollutants and regulated only some sources of seven. At the same time a handful of active States have set standards for 708 different substances.

The problem under current law is a disagreement about the regulation of the cancer-causing pollutants. The law says that EPA is to provide an "ample margin of safety to protect the public health." Safety is the bottom line. But Government policy since the 1950's has been based on the principle that there is no safe level of exposure to a carcinogen.

Taken together the two principles imply that there can be no emissions of cancer-causing agents. That would be the only way to assure safety, but in an industrial society zero emissions is a practical impossibility. Over the years EPA has tried in a variety of ways to solve this dilemma by factoring cost considerations into the very stringent health standard for hazardous air pollutants in the current Clean Air Act. They have been sued and lost on each occasion.

The bill reported by the committee has a two phase regulatory program that is designed to get the program moving. There is a broad consensus on the first phase. It requires EPA to issue emissions standards for a large number of industrial categories which will require about 20,000 individual facilities which are major sources of about 200 air toxics to install best available control technology. These technology standards will take cost into account and should achieve emissions reductions that average 90 to 95 percent from current levels. They apply to the large industrial facilities like chemical plants, oil refineries and steel plants. A very similar program has already been implemented for toxic discharges to surface waters.

The bill contains a separate program to control the smaller area sources of these pollutants. Areas sources include dry cleaners, wood stoves, gas stations and cars, buses and trucks. EPA is to develop a national area source strategy which will reduce cancer risks from these pollutants by 75 percent which is the goal the President announced last summer.

The second phase of the program is called residual risk. It is the point of controversy in the air toxics title. It is the same controversy which has plagued current law. The technology standards of the first phase do not guarantee that emissions will be reduced enough to prevent all health risks. A 90-percent reduction in emissions of a cancer-causing substance

cannot remove all risks, if by definition there is no safe level of exposure. The remaining 10 percent, the residual risk, is addressed in the second phase of the program.

The committee bill takes a middle ground position. On one side of this debate, the environmental community is asking that cancer risk from industrial point sources be limited absolutely to no more than a 1 in 1,000,000 chance of contracting cancer. That is a traditional definition of negligible risk and is included in the air toxics legislation which Congressman WAXMAN has introduced on the House side.

On the other side, the administration is proposing that no specific standard be placed in the law. Rather, EPA would be given authority to regulate any unreasonable risk should it be discovered. That same unreasonable risk standard has been used in the other laws for chemicals and pesticides, but has not worked well. Finding an unreasonable risk means balancing the costs of control against the adverse health effects of the pollutant on a case-by-case basis with no firm standard.

The bill reported by the Senate committee has a residual risk goal of 1 in 1,000,000. Sources which can reach that level will be required to do so as they would be under the Waxman bill. However, sources which can't get to 1 in 1,000,000 because it is not feasible may get a waiver. They may continue to operate at higher risk levels. But the bill puts an overall cap on the risk that will be allowed at 1 in 10,000.

A 1 in 1,000,000 risk means if 1,000,000 people were exposed to the emissions from a plant over their whole lifetime, just one person would contract cancer as a result of that exposure. A 1 in 10,000 risk is 100 times higher. There would be 1 additional cancer for every 10,000 persons exposed.

The administration and industry are asking that some flexibility be provided in the residual risk phase. That's their plea. The Senate bill provides flexibility. It adopts the traditional negligible risk threshold of 1 in 1,000,000 as a goal, but allows a waiver where that requirement is infeasible and more time is needed to develop control technology. It caps the range over which the Administrator can be flexible at 1 in 10,000—100 times more risk than the traditional negligible risk standard which the environmentalists want as an absolute.

In addition to this two-phase program to control routine emissions of air toxics, the bill also includes a program to prevent catastrophic chemical accidents like that which occurred in Bhopal in 1984. EPA has published an inventory of these events which indicates that more than 11,000 chemical accidents occurred in the United States between 1982 and 1986. That is four per day. More than 300 people were killed. More than 11,000 were injured with hundreds of thousands evacuated from homes and jobs and hundreds of millions of dollars lost in property damage. The most surprising finding of this EPA study was that 17 of the events had the potential to cause more damage than Bhopal. The chemicals released were more toxic or released in larger amounts. That few were injured or killed in these 17 events is mere good fortune. The committee hopes to replace good fortune with good engineering so that fewer of these events occur.

The bill establishes a Chemical Safety Board to investigate these accidents. It will operate much as the National Transportation Safety Board does for aviation accidents. EPA will be authorized to issue regulations to make chemical manufacturing and processing safer based on recommendations which the Board develops.

CONTROL OF CFC'S

Mr. President, title VII of this bill adds a new title V to the Clean Air Act. It repeals sections 150 through 159 of the existing law and replaces them with the Stratospheric Ozone and Climate Protection Act.

This new title is designed to address the dual problems of global climate change and destruction of the stratospheric ozone layer, both of which are caused by atmospheric pollution—air pollution.

The 1977 Clean Air Act Amendments tried to address the ozone depletion problem. As a result of those amendments, part B of the existing law authorizes EPA to regulate chlorofluorocarbons—known as CFC's—but it does so only in very general, vague terms.

The legislation before us today is a natural extension of the existing law. As with the rest of the act, we are updating it on the basis of new science and technological developments.

There is no question that we are breaking bold, new ground with this bill. As stated in a letter circulated by environmental groups in support of this legislation.

Enactment of this bill is the first concrete action Congress can take to reduce the global threats of ozone depletion and the greenhouse effect.

Numerous committees on both sides of the Hill have held hearing after hearing on the problems of global climate change and destruction of the ozone layer. But now the Senate has the opportunity to actually do something about these problems.

This bill focuses on the control of CFC's and similar compounds—manmade chemicals that are responsible for destruction of the ozone layer.

Although ozone at ground level is a toxic pollutant responsible for smog and all kinds of health and environmental problems, ozone in the stratosphere, 6 to 30 miles over our heads, is good ozone. While we are trying to eliminate ozone down here, we want it to stay up there.

The stratospheric ozone layer is the Earth's main shield against the Sun's harmful ultraviolet [UV] radiation. A decrease in stratospheric ozone allows more UV radiation to reach Earth and the experts tells us that this will cause increased rates of disease. We will see increased rates of skin cancer, cataracts—the leading cause of blindness in this country—and, potentially, suppression of the immune system. If our immune systems are affected, all of us will be more susceptible to diseases of all types.

The problem is this: CFC's and similar compounds are persistent, extremely stable chemicals that rise up into the atmosphere intact until they reach the stratosphere. In the stratosphere, the Sun's radiation breaks the molecule apart and frees the chlorine component. The chlorine then attacks and destroys ozone.

EPA has estimated that a phaseout of CFC's and halons in the year 2000—the date set out in this bill—will benefit the entire U.S. population born before 2075 by eliminating almost 158 million cases of skin cancer, more than 3 million cancer deaths, and over 18 million cases of cataracts.

The addition of methyl chloroform to the year 2000 phaseout will eliminate an additional 3.6 million cases of skin cancer, almost 65,000 cancer deaths, and more than 360,000 cases of cataracts among U.S. residents born before 2075.

In addition to the health effects associated with increased UV radiation, damage to the ozone layer presents a serious threat to our food crops by reducing crop yields. All forms of life on land and in the sea are at risk.

EPA has estimated that the economic and environmental benefits of a year 2000 phaseout of CFC's and halons is approximately $58 billion through 2075 in the United States alone. This includes $41 billion in the form of reduced damage to our food crops.

Most of us are familiar with the connection between CFC's and destruction of the ozone layer. Less well known, however, is the connection between CFC's and global climate change that is predicted to occur as a result of an intensified greenhouse effect.

The threat of uncontrolled global climate change is caused by the accelerating accumulation of greenhouse gases in the atmosphere, primarily carbon dioxide, CFC's, and methane. These gases act as a thermal blanket, trapping heat in the Earth's atmosphere and causing temperatures to rise.

Carbon dioxide emissions account for an estimated 50 percent of the pre-

dicted global warming. CFC's are estimated to account for a substantial portion of the problem—from 15 to 20 percent.

The fact that each molecule of CFC has approximately 20,000 times more impact on global climate than does a single molecule of carbon dioxide makes the control of CFC's an important part of any strategy to combat global warming.

It is easy to overstate the uncertainty that surrounds this issue. It is true that scientists disagree about matters such as whether the greenhouse effect has already begun. It is true that there is no scientific consensus about the precise timing or magnitude of the predicted changes.

Nevertheless, there is a remarkable degree of scientific consensus concerning the threat of massive, uncontrolled global climate change. Specifically, most experts agree that if we do not change our pattern of polluting the atmosphere, many of us, our children, and our grandchildren will experience devastating climate changes of a magnitude and at a rate that will preclude natural evolutionary responses.

There appears to be consensus on another critical point. That is: By the time there is scientific proof for every detail of the problem, it will be too late to avoid the most devastating impacts of an intensified greenhouse effect and global climate change.

We can ill-afford to wait for 10 years of research before we take action: First, to reduce atmospheric concentrations of greenhouse gases to limit the rate and extent of future climate change; and second, to implement adaptation strategies for coping with the changes to which we are already committed.

Elimination of these ozone destroying chemicals is a double winner. First, it is the most effective, single step we can take to curb the phenomenon known as the greenhouse effect. Second, prompt elimination of these chemicals is absolutely essential if we are to stop destroying the ozone layer.

By reviewing the history of this serious environmental problem, we can develop a better understanding of the need for this legislation.

In 1974, Drs. Sherwood Rowland and Mario Molina from the University of California published a paper demonstrating how CFC's destroy ozone in the stratosphere. In this country, the original scientific theory led to a ban on the use of CFC's in most aerosols in 1978. The ban was promulgated by EPA and the Food and Drug Administration.

There were no measurements of actual ozone loss, just the scientific theory.

Recognizing the problem, industry began to look for safe substitutes. Progress was being made when, in the early 1980's, the threat of further Government regulation subsided, the search for substitutes came to a virtual standstill, and worldwide use of CFC's continued to grow.

Today, the United States produces approximately 700 million pounds of CFC's each year, accounting for roughly one-third of the world total. Nonaerosol uses of CFC's in the United States have grown to record high levels and per capita usage of CFC's in the United States is among the highest in the world.

In 1985, scientists discovered a significant loss of ozone over a portion of the southern hemisphere that is the size of North America. The collapse was not predicted and measurements have revealed losses greater than 50 percent in the total column and greater than 95 percent between an altitude of 15 to 20 kilometers—9 to 12 miles. The discovery of this hole in the stratospheric ozone layer over Antarctica gave renewed impetus to international efforts to understand and protect the ozone layer.

In September 1987, the Montreal protocol on substances that deplete the ozone layer was negotiated and signed by more than two dozen nations. The protocol entered into force in January 1989 and more than 40 nations are now parties to the protocol.

Unfortunately, since the Montreal protocol was negotiated and signed in 1987, scientists have observed and measured losses of ozone on a global scale. It has been discovered that destruction of the ozone layer is not limited to remote, uninhabited portions of Antarctica.

A map showing the areas affected by this loss of ozone is printed in the committee report at page 384. That map shows losses measured over vast areas of this country and brings the problem dangerously close to home.

Losses of ozone since 1970 have been measured during the winter months on a worldwide basis, including losses ranging from 2.3 to 6.2 percent over densely populated portions of the Northern Hemisphere. These measurements of actual ozone loss are significantly greater than computer models had predicted and raise serious questions about the adequacy of the control measures set forth in the Montreal protocol and existing EPA regulations.

Mr. President, if we fail to enact this bill we will be aggravating the problems of global climate change and destruction of the ozone layer.

The United States is the largest producer and user of these chemicals in the world as stated earlier. We account for roughly one-third of worldwide use of CFC's and halons, more than any other nation in the world. The significance of our contribution compared to other nations is represented by the pie chart on page 381 of the committee report.

Of even greater significance is the bar graph on page 382 of the report. This chart shows that, even though we banned most aerosol uses in 1978, per capita consumption of ozone depleting chemicals in the United States continues to be among the highest in the world and exceeds that of Western Europe, Japan, the Soviet Union, China, and India by a substantial margin.

In 1986, we consumed 1.52 kilograms for every man, woman and child in the United States. That is more than 3⅓ pounds per person.

By comparison, Western Europe used 1.18 kilograms per capita, that is around 2.5 pounds per person or 25-percent less than the United States; Japan was next at 0.95 kilograms, equal to 2 pounds and, compared to the United States, 40-percent less per person; the Soviet Union consumed 0.43 kilograms per person, less than 1 pound, and more than 70-percent below our level; and China and India weigh in at 0.02 kilograms, less than one-half pound per person, almost 99-percent less than United States levels.

If we fail to enact the emissions controls called for in this bill, the United States will be responsible for the damages caused by the production of almost 700 million pounds of new CFC's each year that will find their way into the atmosphere. In addition, we will be releasing all of the CFC's produced in past years and currently contained in products such as refrigerators all across the country.

Assuming a simple, year 2000 phaseout of CFC's without emission controls, just new production in this country between now and the year 2000 would result in more than 6 billion pounds of CFC's being released into the atmosphere.

The Stratospheric Ozone and Climate Protection Act will accomplish three major objectives.

First, it will force the elimination of the most potent ozone depleters—CFC's-11, 12, 113, 114, and 115, the halons, and carbon tetrachloride—as soon as possible and no later than the year 2000. This is consistent with commitments made by our domestic chemical producers, the President of the United States, and the leaders of some 80 other nations that met in Helsinki last May.

Second, with the addition of a floor amendment we will be offering, it will control production and use of other ozone depleting chemicals in a manner that protects the ozone layer.

Third, it will eliminate unnecessary emissions of ozone depleting chemicals by mandating a new recapture and recycling program.

This title of the bill has seven main elements.

First, it declares it to be a national policy that CFC's, the halons, and

carbon tetrachloride, should be eliminated "as expeditiously as possible".

Second, the Administrator is required to implement a phaseout schedule more aggressive than the schedule set forth in the bill if: First, information suggests it may be necessary to protect human health and the environment; second, based on the availability of substitutes, an accelerated schedule is attainable; or third, the Montreal protocol is modified to include a more aggressive schedule.

Third, subject to acceleration by the Administrator, the bill places CFC's on a production phase-down schedule that tracks the current version of the Montreal protocol—20 percent reduction in 1993 and 50 percent reduction in 1998—and adds an additional step: elimination by not later than 2000.

Fourth, halons and carbon tetrachloride are placed on the same phaseout schedule as the CFC's—the current version of the protocol will only freeze production of the halons and does not regulate carbon tetrachloride at all, both of which are powerful ozone depleters.

Fifth, it will place a limit on the production and use of hydrochlorofluorocarbons [HCFC's] and methyl chloroform.

Sixth, as a supplement to the production phaseout, the bill provides for significant reductions in the emissions that are destroying the ozone layer and contributing to the greenhouse effect. To achieve this—

By July 1, 1991, EPA must promulgate recapture and recycling regulations;

As of January 1, 1992, the practice of venting these chemicals from refrigeration and air-conditioning units will be prohibited;

By January 1, 1994, EPA must promulgate safe disposal regulations;

Statutory limitations and controls are prescribed for motor vehicle air-conditioning systems in the form of mandatory recapture and recycling by January 1, 1992, and, beginning with model year 1994, a requirement to equip a portion of the new car fleet with air-conditioning systems that do not rely on CFC's; and

Statutory limitations and controls are prescribed for nonessential consumer products containing CFC's. Specifically, effective 1 year after enactment, there will be a ban on the sale and distribution of items such as CFC-propelled plastic party streamers and noise horns.

Seventh, the bill includes trade sanctions providing that 12 months after this becomes law, importation of CFC's, halons and carbon tetrachloride in bulk or in products will be prohibited unless EPA certifies that the country of origin is a party to and in compliance with the Montreal protocol.

At the same time, persons subject to U.S. jurisdiction will be prohibited from transferring technology or investing in facilities to produce or expand the use of these chemicals in countries that have not been certified. To be certified after the year 2000, a country must be implementing a control program no less stringent than ours.

On November 3, 1989, EPA circulated a draft report entitled "Costs and Benefits of Phasing Out CFC's and Halons in the United States." The report estimates that a year 2000 phaseout of CFC's and halons will create social costs in the United States of around $2.7 billion between 1989 and 2000 (an average of $225 million per year). Over the longer term, between now and 2075, the costs are estimated to be in the range of $49 to $50 billion.

More importantly, however, the report goes on to show that the benefits of a year 2000 CFC and halon phaseout range from just over $3 to more than $12 trillion through 2075. The report demonstrates that these benefits exceed the social costs by a substantial margin.

Even if we take the lowest estimate of benefits and the highest estimate of costs, the benefits come out on top by a margin of $3 trillion to $50 billion—that is a ratio of 60 to 1.

The benefits to just crop production in this country are estimated to be $41 billion through 2075. That benefit alone is almost enough to justify the costs of controls.

What kind of health benefits are we talking about? As I mentioned earlier, EPA has estimated that a year 2000 phaseout of CFC's and halons will benefit the entire United States' population born before 2075 by eliminating almost 158 million cases of skin cancer, more than 3 million cancer deaths, and over 18 million cases of cataracts.

The addition of methyl chloroform to the year 2000 phaseout will eliminate an additional 3.6 million cases of skin cancer, almost 65,000 cancer deaths, and approximately 363,000 cases of cataracts among U.S. residents born before 2075.

During markup of this bill, we heard two arguments against this title. The first was that no one had seen it.

That is simply not true. This title is based on a bill that was first introduced in February 1987, reintroduced in March 1989, and reported by the Environment Committee as part of the budget reconciliation process in July 1989.

The July version of the bill attracted a great deal of attention. We received numerous comments and suggestions on how to improve it. Many of those comments were incorporated into a new draft that was widely circulated in early November and approved by the Environment Committee on November 16.

The most controversial portion of the July version, the imposition of a production fee and windfalls profit tax is not included in this bill. That issue was dealt with in reconciliation and is not before us today.

The second argument against this title was based on the alleged failure to hold hearings. Our committee has developed an extensive hearing record on this issue and on this legislation. We have held 10 days of hearings on this since June 1986. As I mentioned earlier, the bill that forms the basis for this title, S. 491, was first introduced in February 1987. Since it was first introduced, we have held 6 days of hearings, the most recent being May 19, 1989.

We have received testimony from scientists, the administration, producers, users, and environmentalists. This has been a very open process.

One of the most commonly heard arguments against this bill is based on the erroneous premise that unilateral action will do nothing to help the environment, it will put our domestic industries at a competitive disadvantage, and it will tie the hands of the administration that is trying to negotiate a revision of the Montreal protocol.

Sure there is some risk with unilateral action. But we have been careful to craft a program that promotes U.S. interests. No one wants to unfairly penalize our domestic industries.

Our approach to this problem involves several key points. First of all, it is important to keep in mind that the controlled use and recycling portions of this bill will not interfere with the ongoing international negotiations.

The protocol does not address emissions controls and unilateral action on this front is being taken by numerous countries that are parties to the Montreal protocol. Canada, Germany, and the Scandinavian countries, are all imposing controls on the various uses of CFC's and halons.

Even in the area of phaseout schedules, several countries are moving faster than the international process. For example, in March 1989, the German Bundestag decided unanimously to mandate a 95-percent reduction by 1995.

This bill is designed to eliminate these chemicals as quickly as possible while, at the same time, leaving room for international negotiations. It tracks the reduction schedule set forth in the current version of the Montreal protocol—a 20-percent cut in 1993 and a 50-percent cut in 1998—and adds a final step, elimination by no later than 2000.

At the international level, various proposals to accelerate the protocol's interim reduction schedule are being

discussed by the parties to the protocol. For example, the European Community has suggested a 50-percent cut by 1992 and an 85-percent cut by 1996. At the same time, Canada has proposed a 50-percent cut in 1995 and 85 percent by 1998.

The expectation is that strengthening amendments to the protocol will be adopted by the parties at a June 1990 meeting in London, including an amendment to eliminate CFC's in industrialized countries by 2000.

Many of us in this body think we must and can do better in terms of both the current interim reduction schedule and the year 2000 phaseout. The original version of my bill would have accelerated the protocol's schedule by requiring a 20-percent cut in 1992, a 50-percent cut in 1995, and complete elimination by 1997.

I support the proposals put forth by the EC and Canada but, recognizing that our international negotiating team needs some room to maneuver in the next few months, this bill gives them guidance but stops short of mandating immediate, unilateral acceleration of the phaseout schedule.

Apart from the question of negotiating room, the notion that no one should do anything until everyone agrees to act together is a formula for disaster.

As I noted earlier, the United States is the largest producer and user of ozone depleting chemicals in the entire world. We created them. We have a responsibility to lead the world in eliminating them and finding safe substitutes.

Not only will unilateral action provide world leadership, it will push our domestic industries to the front of the line in terms of finding solutions to the problem. The world is clamoring for a CFC-free society. The requirements of this bill can help our industries seize the opportunity and develop a competitive edge.

Some of our companies are already thinking along these lines. For example, a review of activity in the electronics area shows that:

In August 1989, American Telephone & Telegraph announced a new corporate policy to eliminate all CFC emissions from its manufacturing processes in the United States and abroad by 1994. It had already initiated a policy of not accepting any packaging or packaging material from its suppliers that are made with CFC's;

Northern Telecom has made commitments to end their use of CFC-113 by 1991;

Boeing plans to reduce its use of CFC's regulated under the protocol (CFC's-11, 12, 113, 114, and 115) 60 percent by 1992 and 90 percent by 1995. Their goal is to reduce use of ozone depleting chemicals not regulated under the protocol, such as methyl chloroform, 20 percent by 1992 and 50 percent by 1995.

In September 1989, IBM established a goal of complete elimination of the use of CFC's by the end of 1993. In addition, plant managers have been advised to avoid the use of methyl chloroform as a substitute for CFC's.

In the interim, IBM is working to minimize releases of CFC's through the use of conservation and recycling and has made significant progress in reducing emissions. For example, their 1988 emissions in the United States were 25 percent less than in 1987 and, at their San Jose site, the reduced emissions 50 percent in 1988 by switching to a water-based cleaning process;

In December 1989, the American Electronics Association announced a new policy targeting a 50-percent cut in CFC emissions by 1993, an 80 percent cut by the end of 1997, and 100 percent elimination by 2000. The AEA also pledged to reduce emissions of methyl chloroform 40 percent by the end of the year 2000; and

In September 1989, Storage Technology Corp., a Colorado-based company, annouced that it is committed to a 50-percent reduction in CFC emissions by the end of 1990 and to the elimination of CFC emissions by 1993.

The fact that about 41 percent of CFC-12 that is used for refrigeration in this country is used in vehicle air-conditioners makes progress in the automotive arena particularly important. Here we find a number of encouraging developments. For example:

In August 1989, General Motors announced that a compact recycling machine is available to GM dealers for the 1990 model year and will be required service equipment for the 1991 model year beginning in the fall of 1990;

In September 1989, Underwriters Laboratories endorsed several new recycling machines for use on automobiles under warranty, and;

Hertz has announced that it is supplying all of it car maintenance centers with recycling systems;

Nissan has said that by the year 1993 its air-conditioners and manufacturing processes will be completely free of CFC's;

Calsonic International, announced in October 1989 that they had successfully built an automobile air-conditioning system that works without CFC's;

The Rovac Corp. has developed a patented rotary-vaned, low-pressure compressor that uses no CFC's. These units reportedly meet or exceed the performance of traditional CFC-based mobile air-conditioning systems;

In January 1989, EPA and the Motor Vehicle Manufacturers Association announced a voluntary agreement on an industry standard of purity for recycled refrigerants as part of an effort to reduce emissions; and

The Mobile Air-Conditioning Society, which represents manufacturers, distributors, and over 400 service establishments nationwide that service mobile air-conditioners, is urging its members to reduce releases of CFC's through recycling.

Home appliances and commerical heating and cooling systems are also significant users of CFC's. Here too, we are seeing some companies step up to the plate:

In October 1989, Whirlpool Corp., the world's largest manufacturer of major home appliances, announced the development of a portable process to recover CFC's during in-home repairs of refrigerators and freezers. They plan to have this equipment available next spring for all 6,500 service companies authorized to do warranty repair work for them, and;

A Texas company known as Ener-Craft, Inc. is marketing a portable CFC recycling machine for use on large chillers and heat pumps;

An engineer at the University of Northern Iowa has devised a system for recovering and recycling CFC's from large building and commercial cooling units;

Carrier Corp., the world's largest manufacturer of heating and cooling systems and equipment, recently introduced a new recovery and recycling system designed to capture large quantities of CFC-11 from commercial chillers; and

In September 1989, the appliance industry formed a research consortium with EPA and the Department of Energy. Their goal is to identify energy efficient, environmentally safe substitutes for CFC's currently used in refrigerators and freezers and to eliminate the use of CFC's as soon as possible before the year 2000.

If every company in America was following the lead of those included on this list, we would not need this bill. Unfortunately, these companies are still the exception rather than the rule.

In announcing the development of a new process that eliminates the need for CFC's as blowing agents in the manufacuture of foam seats and furniture cushions, the chairman of Union Carbide, Robert Kennedy, summed it up well, when he said:

> As a company whose products are essential for virtually every major industry in this country, we see tremendous opportunity for technology to come to the aid of the environment. And we intend to pursue them.

This legislation should not be viewed as an unfair burden being heaped on U.S. industries. The environmental problem known as ozone depletion is indeed a problem. But it is also an opportunity.

By waiting for measurements of actual ozone loss, by failing to take ap-

propriate action on the basis of credible scientific theory, governments around the world allowed a manageable environmental threat to become an environmental crisis. As a result of atmospheric lag time and the persistence of CFC's and similar ozone depleting and greenhouse forcing gases, it is too late to prevent additional damage to the ozone layer or human-induced global climate change.

Our challenge is to take action as rapidly as possible that will, to the greatest extent possible: First, reduce the threat of additional damage to the ozone layer; and second, reduce the rate and magnitude of human-induced global climate change.

Title 7 of this bill on CFC's and similar compounds meet that challenge, Mr. President, and I urge my colleagues to support it.

ACID RAIN

Let me turn now, briefly, to title IV of the committee's bill, the title that deals with acid deposition. We have, after 9 years of debate over whether there is a need for legislation on this issue, finally arrived at widespread agreement that the answer is "Yes."

The Administrator of the Environmental Protection Agency, Bill Reilly, made the case as succinctly as anyone when he testified before the Environment Committee last September, as follows:

> From years of scientific research we know that acid rain has damaged not hundreds but thousands of lakes and streams both in the United States and also in Canada. We know that acid rain is responsible for fully half of the haze, the visibility impairment that hangs over the Eastern United States, and that it seriously degraded the experience of visibility in some of the Nation's crown jewels—some of its great national parks, such as the Grand Canyon.
>
> We know that acid rain damages building and monuments. We know that acid rain impairs tree species and weakens our forests. And, finally, scientists have long been concerned over studies linking aerosols to damaged respiratory function in children and even to excess deaths.
>
> In the face of this research and in the face of what we now know, the President has concluded the time for study is over now. Now is the time for action.

The Environment Committee agrees with the President and has, with a few modifications, incorporated into our bill the President's proposal for controlling acid rain. Both the President's bill and ours call for 8.5 million tons of reductions in sulfur dioxide emissions from electric utilities between 1980 and 2000. These reductions, together with reductions from industrial sources and from reducing the sulfur content in diesel fuel, will achieve a total of 10 million fewer tons of SO_2 pollution in 2000 than in 1980.

Utilities will be required to reduce SO_2 emissions in two phases: By the beginning of 1995, 107 plants listed in the bill must meet specified emission tonnage limitations, and by the beginning of 2000, the bill sets tonnage limitations for six different categories of utilities depending on their size, emission rates prior to 2000, and the fuel used.

The committee bill, like the President's bill, caps SO_2 emissions after 2000 to assure that the environmental gains from reducing SO_2 are not wiped out by emissions growth.

The committee bill adopted the President's innovative approach to achieving SO_2 reductions in a cost-effective manner: it provides for an allowance system that lets utilities—or other SO_2 emitters, if they choose—buy and sell emission reduction credits. This system permits the owner of a facility that can reduce emissions at lower costs achieve controls beyond what it is required to do and sell the excess emission reductions to the owner of another facility for which controls would be more expensive.

The allowance system, in addition to encouraging implementation of the most cost-effective controls, provides a means for some of the utilities with the greatest emission reduction requirements to partially recoup control expenses by selling excess emission reductions at prices above what they paid to control emissions. The allowance system, together with the cap on emissions after 2000, also encourages energy conservation and efficiency.

The committee bill does differ somewhat from the President's in its treatment of emissions of NO_x. The bill sets specific emission limitations for NO_x from utilities, depending on the type of boiler involved. The level of control required is expected to reduce NO_x emissions from utilities by 2 million tons below current levels by 2000. Together with other provisions in the bill, total NO_x reductions could approximate 4 million tons below 1980 levels by 2000.

Oxides of nitrogen are harmful to the environment in a number of ways. As I have already mentioned, NO_x is one of the necessary ingredients in the formation of ozone. NO_x, in addition to SO_2, is a precursor of acid rain and dry acid deposition. And a recent study by the environmental defense fund identified NO_x emissions from utilities and vehicles as the second greatest source of nitrogen loading in the Chesapeake Bay, surpassing sewage outfalls and runoff of animal waste. Nitrogen, a nutrient, causes excessive growth of algae, loss of oxygen and light to the water and the long-term decline of marine life.

The committee acknowledges that with a program as innovative as the acid rain proposal, there may be a need to make adjustments to assure equitable treatment of all the affected sources. Like the President, we are working to find a program that accomplishes the fairest distribution of reduction requirements while reducing total SO_2 tonnage by 10 million tons below 1980 levels, keeping in place the tonnage limit after 2000, and assuring significant and permanent reductions in emissions of NO_x.

ENFORCEMENT AND PERMITS

Mr. President, I want to turn now to titles V and VI of this bill, and explain very briefly their importance to our clean air effort.

Title V of the bill conforms the Clean Air Act to many other environmental statutes by requiring plants that emit significant amounts of air pollution to obtain operating permits.

Title VI of the bill grants to EPA the same kinds of powers to monitor performance and enforce compliance with the Clean Air Act as the agency already enjoys under other environmental statutes, such as the Clean Water Act.

Both of these titles were recommended to us by the President. These titles are modeled after provisions the Senate has already approved in the context of another significant piece of environmental legislation—the Clean Water Act. In particular, the operating permits called for under title V of the bill would follow the very successful permit program authorized under the Clean Water Act. And the kinds of enforcement flexibility built into title VI of the bill are essentially the same as found in the Clean Water Act.

I want to emphasize these similarities for a very important reason. Just 3 years ago the Senate passed the Clean Water Act over President Reagan's veto by a vote of 86 to 14. I can assure the Senate that the need for permitting and enforcement under the Clean Air Act is just as great as is the need for enforcement of the Clean Water Act.

In titles V and VI, we give EPA the tools to ensure that those who violate the requirements of the Clean Air Act are identified promptly and punished appropriately.

The permits will serve the very useful function of gathering and reciting in one place—the permit document itself—all of the duties imposed by the Clean Air Act upon the source that holds the permit. This would clearly be an improvement over the present system, where both the source and EPA must search through numerous provisions of State implementation plans and regulations to assemble a complete list of requirements that apply to any particular plant.

To cover the costs associated with processing the permit and with monitoring permit compliance, the title will require each permitted source to pay a fee.

The title grants EPA the flexibility to design a variety of permits tailored to the needs and processes of each source. For example, the title would allow EPA to issue general permits for

entire classes of similar sources—such as service stations. The title would also allow EPA to issue a bubble permit that would cover a single plant that had numerous emission points.

Once these permits are in place, plant managers will be better able to understand and to follow the requirements of the Clean Air Act. At the same time, EPA will be better able to monitor how well each plant is complying with those requirements. This is a highly sensible approach for all concerned.

Title VI of the bill conforms the enforcement provisions of the Clean Air Act to the kinds of provisions already found in the Clean Water Act and other environmental statutes in several ways.

First, the title expands the range of activities that can be the subject of civil or criminal penalties. It is most important to our efforts to maintain progress in protecting air quality that we have on the books significant sanctions that are available to punish those who violate the act. This title makes those penalties available to EPA in appropriate cases.

Second, the title provides EPA with the ability to impose administrative penalties on violators of the act. This provision establishes a system that is like the one EPA has used quite successfully to respond to violations of the Clean Water Act.

Third, the title allows courts to impose civil penalties when citizens successfully show violations of the act. These penalties will be deposited in a special treasury fund for use by EPA to help pay for air pollution programs.

Fourth, the title will allow citizens to sue EPA to compel actions that the agency has unreasonably delayed. This provision will help to ensure that our progress toward cleaning the air continues at a steady pace, and that statutory requirements are met by the agency.

The enforcement provisions are much-needed additions to the EPA arsenal in its efforts to monitor and maintain strict compliance with the Clean Air Act.

The PRESIDING OFFICER (Mr. BRYAN). The Senator from Wyoming is recognized.

Mr. SIMPSON. Mr. President, I am very pleased the Senate is finally going to debate the Clean Air Act reauthorization on the Senate floor. In the past, the Senate Environment and Public Works Committee has reported some very extreme clean air bills that never ever seemed to be debated, but it is always a great exercise. The vote is usually 16 to 0 or 15 to 1 and we shoot this thing out of committee to the desk and watch it just languish there and nothing ever happens, and that has happened for 8 years.

If anybody wonders why we have not done a Clean Air Act, it is because of extremists on both sides of the issue. I have watched them. They are purists in the ultimate form: It is not a pure enough bill. We need more time to study. It will wipe out corporate America.

I have seen all sides of this one. They have effectively stopped clean air legislation for 8 years, and they should get their lumps for that. That does not mean we process and go forward in a blind way, but it does mean that we have serious issues and we must address them, and we have and we will.

But I have been, I must say, very frustrated as we have dealt with issues of how we got this far. We wanted a bill that was flexible; we wanted a bill that would do the job, that would reduce acid rain by 10 million tons, and assure that we meet the test of the polluter paying. We had to have caps. We cannot have a proper bill without caps. Emissions trading is admittedly a subsidy, but we are ready to consider that.

I want to pay particular tribute to Senator BAUCUS, who had a tough, tough job. He represents a Western State, my northern neighbor, Montana. He has the same problems there. They have a lot of coal in that State, too—one of the big coal-producing States. They are very interested in their environment and they have much to preserve, like we do in Wyoming, pristine areas, remarkable vistas. And so it is a tough one for him.

There is a lot of conflict in it, I can imagine, as he is here on the floor managing the bill. But in the course of it, we all feel that type of conflict. I hope we can stay with our agenda, which so far we have, through subcommittee and full committee. But I must say that I am somewhat disturbed to hear the debate now going suddenly into the issue of children, dead babies.

Come on, we have to do better than that on this issue. It is a tough issue. We have been to those extremes. We have heard those things before and got nowhere. Certainly there is not anything to be partisanly gained by saying that one side is more interested in the youth of our Nation or less dead babies. We really do not need that in this argument. No one is for that.

Those are the things that make our work difficult. I have said 150 times from this floor the way you pass or kill a bill when you do not have merits with it is to use a deft blend of emotion, fear, guilt, or racism. We do not need that. We certainly do not need it here. It is the reason we have not done anything for 8 years.

All of us know that the public health is affected by acid rain. Who does not? And if that continues to come up, I will continue to wander out here and through my angular form into the fray. We do not need that. That is unbecoming in this debate. What we do need is to talk about what this is going to do. Is it going to get the job done for us? Is it going to keep America competitive? Because one of the things I know that this fine chairman has spoken about for years is competitiveness. Now we are looking at some real hold cards on this bill after we do this, and we are going to do it, and I am going to be ready to do it. I will do everything I can to assist.

We are not here to peddle low-sulfur coal or just represent our own States selfishly. We are ready to do things, ready to do things to assist the Midwest. We are ready to see that we do not do something to punitively impact on them. We are ready to see we do not do punitive things to the high-sulfur coal industry. But we are not going to let punitive things happen to the low-sulfur coal industry either like we did with percentage reduction like in 1977 before any of us were here. That is not going to happen.

We think the polluters should pay. The rates in the West should not be 343 percent higher than the average, and the rates in the Midwest should not be 33 percent less than the average. That means grinding. We are going to do that. But these are important issues.

Then there is a part of this bill which there are not five people in America who really know what is in it, and that is the toxic pollutant aspect of it. It is highly complex. It is highly technical. There are two or three staff persons that crank around in it and I think eat it for breakfast. The rest of us just kind of wander into the vapors. Toxic pollutants could have a lot of ramifications that we do not understand at all. It gives me concern. Ozone nonattainment is clear enough. There are areas of the country where 100 million Americans live that are not meeting the ozone levels that we have all prescribed. Some of those places are going to be out of business.

What are they going to use when we finish an acid rain bill? Are they going to then reexamine the nuclear option? Of course they will have to. There are people here on this floor who do not want anything to do with the nuclear option, yet there are 108 reactors already cranking and there will be 1,250 reactors cranking within the next 1½ to 2 years. People forget that. Do we go to low-sulfur coal? Do we go to natural gas?

Anyway, my State will not lose. We produce natural gas and we will be producing a pipeline to California to assist them in enhanced oil recovery and ozone attain. And low-sulfur coal and nuclear—these are tough issues. Then some of these things are dramatic.

I guess I hate to see, too, now a discussion and rhetoric rising not before, but now. Now, here we go. I knew this was going to be a bloodbath. There is not anybody around that knows that is not going to be the case. The reason it will is because, I have said this many times, for the first time in the debate the Midwest Senators will weigh in. We are going to hear it from our unique and remarkable colleagues from Ohio, Illinois, Indiana, and Missouri. We never heard from them before. We sit in the Environment and Public Works Committee and there are a bunch of Senators from the West and the Northeast. We then do our mystical work leaving out the four States that are most critically effected. We are going to hear a lot from them in this debate and should.

We are going to hear about emissions trading and allowances. What does that do? What really does it do? What does it do to the clean States who are already there? How about the clean States that are poor and could not buy any kind of emissions trading? Those are things that are going to be in this debate.

But I think what I see happening too, other than the fact we are now back to the human, is a totally human dimension that anyone who is not aboard now is ready to see our fellow citizens just gasp and go off in a miasma of fog and soot and smoke. That is not what we are talking about.

We have heard rhetoric now about the need for a strong clean air bill. Now we are hearing comments that the President's bill is weaker than the Senate bill and now we are using that ancient argument. We have been there before, too. That always leads to nothing. Remember, we have done nothing for 8 years while the people of America have been clamoring for an acid rain bill.

That type of oversimplification does not provide service to the public or the Congress, absolutely none. It is curious and frustrating, I must say, to hear the old harangues now about certain provisions being weakening amendments. That is always said with a great flutter and gasp; or strengthening amendments which is done with great breast-pounding, and we have all been through that. Use of that terminology is an absolute cop-out now.

The President's bill and the committee bill are both good, good strong bills. I supported the committee bill. I had a little ruckus from that. But I do. I have. I admire the tenacity in which it prevailed as we put it together. But the President's bill provides the same environmental protection as the Senate bill but for about 20 billion bucks less.

Surely we have learned around here that the express train does not run with just how many bucks you can get on the cars as it goes through here. But I do not think we ever do. So if you can do something for less, I think we should do it, and still get the same result. That is what the President's measure could do. I am supportive of both because I am a legislator. If you are a purist you ought to get out of legislating.

We have a long way to go here. We have to go through a floor debate which is going to be contentious and just absolutely riotous. We are going to hear some terrible horror stories about companies and utilities are going to go out of existence they say, and we are going to hear it about the oil industry and their problems. We are going to have to deal with that.

And then we are going to do a bill and we will get it. The House will do a bill and then we will go to conference, and the conference will be an absolutely remarkable gathering. It will be much like Superfund. And some of us on this floor, my colleague from New Jersey and I, were on that conference on Superfund. We remember what that was.

So there is no purity. There is not anyone sitting with their charts either from the administration or the environmentalists or the extremists or the "Don't do anything" crew or anybody who is not going to have to junk those particular documents, and just get into the fray as we do what we should do best, and that is called legislating.

I hope Senators will talk about the relative merits of certain provisions of the bill without resorting to the old business about weakening the Clean Air Act. How can you weaken it any more when you have not done anything with it in 8 years? That ought to be about the ultimate weakness that could ever be had.

So that type of rhetoric I think is very uncalled for, very inappropriate. It is intellectually inferior to the actual debate about what specific provisions will accomplish or not accomplish for a specific cause. I trust we can recognize that the American people are intelligent. They can digest facts, and they can spot the people who get on this floor and try to lead us off into the labyrinth of things other than the factual situation with regard to this. They can digest facts about clean air. And I really do not think we need to hear the old emotionally-charged phrases about weakening and strengthening.

So we are here. We are here because President Bush is deeply involved in the issue. We are here because the Environment and Public Works Committee of the Senate is heavily involved in the issue. But our singular reason why we have come this soon to this issue is because of President Bush. He presented his own bill and it was a good one. He should be given full recognition and credit for being an important catalyst in the consolidation and passage of the clean air legislation.

The past administration was not that deeply involved in the deliberations, and the environmental and the private sector groups were extremely fond of lobbing bombs in order to sabotage any progress toward any kind of good, commonsense bill.

It was our former colleague from Colorado, Gary Hart, who used to call this activity "mau-mau" politics when one talked about the Clean Air Act. I trust, as we proceed with this debate, we will not see this same kind of activity.

It seems to me, and I pay them credit, that the extreme environmental groups have toned down their rhetoric a bit this year. Perhaps their fundraising activities have toppled off somewhat. They will come back into the fray if they need to. I have every reason to believe they are being more reasonable, and I think that is good for us.

We will have to hear the views of our Midwestern colleagues. We will. Acid rain is the premier issue. We know what is driving it. Many polls say the Americans are willing to pay for clean air, but that does not mean we should gouge the public with expensive subsidies or overzealous regulations.

We are all interested in maximum flexibility and least cost. The committee bill leans in that direction with regard to acid rain. I still have my problems with ozone control and hazardous air pollutants. I am ready to help with that.

I think it could, in its present form, put some businesses out of business. I also believe that permitting and enforcement provisions of the bill have not received enough attention from us. I am ready to work on that, because I think some of those provisions may be a bit draconian. That will be resolved.

The acid rain debate is not about the need for action, but it is simply how we do the sulfur dioxide control strategies that should be accomplished. There are going to be differences with regulatory issues, fairness, utility rates, regional coal struggles, environmental impacts.

I think we all agree that there is a consensus for a least cost approach, and no cost-sharing. Last year, over 50 Senators signed a letter to the President embracing the principles of least cost and flexibility. We have three distinct groups in the country, geographically. We have the Northeast, the one most affected, the most vociferous, many damaged lakes. We have the Midwest, which is most affected by the controlled technologies and strategies, and the West and South, relatively clean, that are experiencing—or soon will again—some positive economic and population growth.

We must keep all of these things in context. The history of pollution control and coal production and utility rates is critical to debate and, of course, as I say, we put this thing on the books in 1970. Then we produced the 1977 Clean Air amendments, and then we got into the struggle geographically with high sulfur coal and low sulfur coal. That was destructive. None of us will go back to that. Even those who feel very strongly note that that would be the ultimate criteria, because at that time, back then, the high sulfur coal interest saw that emission reductions could be achieved by either using clean, low sulfur coal or expensive scrubbage, the gas emitted from powerplants burning high sulfur coal.

Organized labor was concerned about losing markets to the cleaner coal States. Even when low sulfur coal is located also in some of those States where they do a lot of high sulfur coal mining, it really is an extraordinary irony that as people speak for a high sulfur coal industry, they often have a low sulfur coal coal industry in the State. As union members speak for a high sulfur coal industry, they have union members in low sulfur coal States. So that has always been contentious.

So in an effort, then, to gimmick the marketplace, the changes were made to help to sell dirty, high-sulfur coal. That was 1977 when that was accomplished. The Midwestern Members, at the objection of Senator Muskie, who was appalled and spoke on it, said this is a wrong thing to do, placed the owner's percentage reduction requirement in the Clean Air Act during the conference committee consideration of the 1977 amendments; and that provision was placed there without any hearings or debate in the House and the Senate, and its full impact was not realized for some time, and maybe not even yet.

In any event, it was done; it mandated the use of costly scrubbers when utilities burned either type of coal, requiring 90 percent sulfur removal when high-sulfur coal was used, and 70-percent sulfur removal when low-sulfur coal was used.

It was billed as an attempt to clean-up the environment, but in fact it was a very blatant effort to unfairly influence the Nation's coal markets. We also have the history of utility emissions. States in the Midwest wanted to continue using their high sulfur coal reserves and so chose to meet the Federal standards without implementing any stronger State-based emission standards. And in the meantime, States such as my home State of Wyoming, and I think Montana, the Western States, passed laws that significantly reduced sulfur dioxide emissions.

I was a member of the Wyoming Legislature, as was the occupant of the chair in his State. We met years ago when we were in the State legislature together, he in Nevada and I in Wyoming. We passed a State law that required an SO_2 standard that is six times more stringent than the Federal requirement. We are not wanting to go back, and we are not ready to pay any more. We have paid. We tottied up and really laid it on the barrelhead.

Well, that strategy allowed the Midwest to continue the burning of local high sulfur coal, with all the economic advantages of doing that and keeping local utility rates low. While these States belched out pollution and damaged lakes in the Northeast, they profited, and very handsomely.

Now we find that the same States are saying it is unfair to require them to reduce their emissions further. I do not see the logic or the fairness in that. These Midwestern States would have us abandon the polluter pays principle, something we have stuck with in Superfund, and almost every other environmental law should not deviate from it now.

Some have called for a national tax to pay the States emitting high amounts of sulfur dioxide to reduce emissions. I think that is an idea that has no merit, personally. Midwestern utilities and rate payers have reaped the economic benefits of their own unwillingness to reduce emissions and so should not be treated as though they were the victims. It reminds me of that old story of the child that murdered his parents and then went before the judge and pleaded for leniency on the basis that he was an orphan. That is about what that argument comes to.

We sometimes see a very strange alliance of large coal companies and organized labor on this issue. We hear the claims about potential job losses and displacement of miners. I am ready to listen to that debate and try to help with that. We do not hear how the percentage reduction requirement helps high sulfur coal producers and how the massive Federal clean coal technology programs benefit mostly high sulfur coal in States east of the Mississippi.

Our new Secretary has realized that because you have low sulfur coal does not mean you should not be involved in new technologies and clean coal technology, but billions and billions of bucks have gone to the high sulfur coal industry in these last years; please remember that in this debate—billions.

They have not suffered. Those programs have truly been subsidies, in any sense, and should be recognized as such.

Obviously, low-sulphur coal has increased over the past several years in production. In fact my State is the No. 1 coal-producing State in the United States today.

A little history is important and it should be pointed out that the traditional coal-producing States of Pennsylvania, West Virginia, Kentucky, and Illinois were the big coal producers for 100 years before we shipped a single load of coal from Wyoming. Indeed the economic benefits of that historic production have been very significant and already been felt by those States. We have not had our chance to feel it.

I also want to say that I am not in favor of clean air legislation in order to simply peddle Wyoming coal. I have said that. I do not need to do that. But I am on record as opposing the gimmickry that we have seen in the past, and I want to be vigilant in order to prevent other types of legislative market tampering and any unfair subsidies in the future.

While we are the No. 1 coal-producing State, the economy of our State is very poor and very fragile. Overall, our economy is based on oil and gas production, and with oil prices at rock-bottom level the people of Wyoming are suffering every bit as much as the people in West Virginia or other high-sulphur coal States.

Finally, I am troubled by the Environment Committee bill because it contains a system of allowances. The allowance system essentially gives "credits" to utility plants that reduce emissions below a certain level and these emission credits may then be sold to offset the cost of the scrubbers. In effect, this is a type of hidden subsidy for Midwestern States. Western States, as I have said, have already cleaned up their emissions, so they have very little opportunity to develop offsets or allowances.

We have before us a bill from the committee with an indirect subsidy provision. I knew it was there. I am willing to do that. And then we hear, though, some of the Midwestern interests want even more assistance, perhaps double allowances or two-for-one credits for emission reductions. The Senate must conclude a conference committee with the House after we consider this bill and the prosubsidy sentiments in the House are stronger than they are here. I can only wonder where those demands will stop.

I note that the administration is adamantly opposed to the two-for-one-allowance proposal, as are a significant number of other Senators.

The final concern about the committee bill, as I have already indicated, is with hazardous or toxic air pollutants. I think there is a general consensus that EPA has not been aggressive enough in controlling these hazardous emissions, but little attention has been given to the Senate hazardous air pollutant provisions. These are lengthy, they are complex, they are confusing. They deserve to be examined extreme-

ly closely and probably should be modified by an amendment during Senate consideration.

I say honestly I do not think there are five staffers anywhere in the Senate or the House who understand it, and certainly there are going to be many things that come up where we are going to receive some remarkably gratuitous amendments which will say, "This is just a housekeeping amendment which will tilt or do something," We all ought to be on guard for that.

I have great concern what that provision can do to the petroleum industry. Title III of S. 1630 specifies hardline risk limits of carcinogens of one in one million, and somewhere along in the whole thing we are going to have to revisit the issue of risk assessment, on who are the gnomes that present to us that if we do this there will be one additional cancer death per million people.

Who are these people? Risk assessment is going to just grind us into rubble in years to come because there are risks to life.

Of course, one of the great risk assessment hearings of years ago before we came to the Senate was as a manufacturer testified in the Dirksen Building on background radiation and one of the members, who will leave us soon, Senator MCCLURE, brought in a radiation device, a Geiger counter, and his presentation showed that the background radiation in the Dirksen Building was greater than the one they had in the bill that they were trying to reach.

So those are the things we go through in this ghastly exercise of environment. We have the extremists on both sides.

It was Bill Ruckelshaus who left the EPA who said:

> This is really some line of work. We get two people in my office. We are talking about radionuclides. One is telling me that on that uranium mill tailings pile, the grass is growing. Antelope eat it and bound through the prairies with renewed vigor. Another one tells me if you walk over the top of the pile, you will be sterilized.

This is what we have to go through in this exercise and we should go through it with this. But as to risk assessment, I hope we will keep a sensible approach to that.

But one in one million to the maximally exposed individual, what is that? Who did that? We are going to have to look at that. And that is without consideration of cost, feasibility, or other important factors, including common sense. It would seem much more prudent to protect citizens from unreasonable risk while considering feasibility.

Then, maximum available control technology. I think that should be defined predominantly by the technology used in each source category and should not broadly specify for technology transfer between source categories.

After listing and ranking of sources, only those source categories meriting control should be required to implement maximum available controls. Otherwise, you are going to have numerous small facilities such as oil and gas production sites posing little risk going to be subject to very expensive requirements. I believe that special consideration should be given to oil and gas production facilities so that only those facilities that are posing the significant risk to the surrounding population shall be subject to those requirements.

I will be offering several amendments to the committee bill during consideration of the legislation dealing with these issues. I am going to work with the committee to determine if we can reach consensus on those before offering them. We had to parry our work and we did. I am not complaining at all. It was a good long markup and it was done. But I will be pursuing that first with the committee, first with the majority, first with the staff. Here we go.

We should be witnessing and taking part in a very spirited debate on a very important subject. I look forward to working with the majority leader, Senator MITCHELL. He and I have been working on acid rain issues for years together. We almost had one. But that is another story.

I will look forward to working with Senator BYRD, an extraordinarily important player in this issue, and he will be a steady and forceful debater in the process.

Our fine leader on our side of the aisle, Senator DOLE; JOHN CHAFEE, the ranking Republican on the Senate Environment Committee; Senator BURDICK, who worked doggedly on this; Senator BAUCUS, who has done a tremendous amount of work on the issue; and all others who have a keen interest in ensuring that Americans have clean air to breathe and natural resources that are adequately protected from pollution and recognizing the tremendous costs that will be required in completing it all in a manner which will not further lessen our competitiveness in this world's economy. These are some things that I am looking forward to, and, indeed, it will be one of the most spirited debates of current vintage.

I thank the Chair.

The PRESIDING OFFICER. The Senator from Montana [Mr. BAUCUS] is recognized.

Mr. BAUCUS. Mr. President, I thank the Senator from Wyoming for that very thoughtful statement. The Senator from Wyoming, the distinguished assistant minority leader, a member of the committee, has continually contributed to a solution to the problem, and his statement here on the floor today is further evidence of that. I say that for many reasons.

No. 1, the Senator pointed out the various regions of the country which historically had difficulty finding a solution, but he went on to point out that he is going to consult first with the committee and, before offering amendments, try to work out a solution in a spirit of compromise. It is for that reason, first, I very much commend the Senator from Wyoming. It is an indication from the minority side that they want to work with the majority side to find an agreement.

The Senator also said "here we go;" it is going to a contentious and raucus debate. It will be contentious at times, and I think there will be very well stated differences of opinion. I tend to think, however, that the year of the passage of the Clean Air Act is here. It will happen this year. Therefore the debate, although it will be confrontational, perhaps will not be as contentious and raucus as some might say. The President wants the bill. The leadership in the Senate and House want the bill. The country wants a bill. There will be a clean air bill this year.

The Senator further pointed out this is a continual process; debate, amendments will be offered, informally and formally, here on the floor. The next step after the passage of the bill here in the Senate will be a full consideration by the House. The House will have its point of view in passage of the Clean Air Act.

After that, there will be the conference. As we all know, the conference is, if not the most critical part of the process, certainly it is one of the most critical parts of the process the passage of any bill. So there will be many opportunities for Senators and for House Members as they examine this bill to offer changes, improvements. And, of course, the committee will be very responsive to those suggestions because it is our goal to finally pass the bill.

We are a complex, large country. The Senator from Wyoming has put his finger on the mark by pointing out, if you listen to the full totality of his statement, that now is the time for cooperation. Let us get together. Let us pass a bill. I again thank the Senator from Wyoming for the very, very constructive and helpful tone that he has helped set here today.

I yield the floor.

The PRESIDING OFFICER (Mr. KERREY). The Senator from New Jersey.

Mr. LAUTENBERG. Mr. President, I ask unanimous consent that the Senator from New York [Mr. MOYNIHAN] be given 5 minutes in this debate without losing my right to the floor.

The PRESIDING OFFICER. Is there objection? Without objection, it is so ordered.

SOCIAL SECURITY

Mr. MOYNIHAN. I thank my distinguished, gallant, generous colleague from New Jersey for giving me this opportunity, Mr. President.

I rise for a painful purpose—to state my disappointment in the remarks made by the President this morning at his press conference in response to questions concerning my legislation to return the Social Security System to pay-as-you-go financing. I introduced the bill yesterday in the company of a number of colleagues, having said on December 29 that I would do so.

Mr. President, there is no "sleight of hand" involved whatever. I do not see that there was any need to make such a characterization. If there is a problem of dissimulation, I would suggest it resides with the present practice of using Social Security trust funds as general revenues. My distinguished friend, the Republican Senator from Pennsylvania, Senator HEINZ, has used a very direct word for this. He says it is called "embezzlement".

The simple fact is that in the National Economic Commission report, published March 1, 1989, the Democratic commissioners said that we would hope to see the Social Security surpluses saved, but if they were not, we would return Social Security to pay-as-you-go financing. We said that on the basis of a General Accounting Office study commissioned by the Subcommittee on Social Security, which was given to the Congress January a year ago, that said save the Social Security surplus or return to pay as you go when you have a reserve of a year's or perhaps a year and a half's worth of benefits.

We proposed in our legislation to do just that. At the end of this year we will have a year's reserve. We have not had such a reserve since 1970. The Social Security benefits are in the best possible shape.

I have to say, Mr. President, that I was surprised this morning when the President was asked about a proposal by a Republican member of the House to privatize Social Security, which is in effect to abolish Social Security. The President described that as "innovative." Is it "innovative" to suggest that after 50 years of steady payments we should start dismantling Social Security? Well, I do not think so.

I ask unanimous consent to have printed in the RECORD an article entitled "House Republicans Push Anew for Privatization of Social Security," by Tom Kenworthy and Helen Dewar, about the proposal the President described as innovative.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Washington Post, Jan. 20, 1990]

HOUSE REPUBLICANS PUSH ANEW FOR PRIVATIZATION OF SOCIAL SECURITY

(By Tom Kenworthy and Helen Dewar)

Two influential House Republicans have dusted off an old idea and tossed it into the raging debate on the integrity of the Social Security trust fund touched off by Sen. Daniel Patrick Moynihan's proposal to cut the Social Security payroll tax by $50 billion a year.

With the backing of House Minority Whip Newt Gingrich (R-Ga.), Rep. John Edward Porter (R-Ill.) yesterday said he will push anew for the gradual privatization of Social Security by using the systems rapidly growing surplus to establish individual retirement accounts for American taxpayers.

Porter, who introduced legislation last year calling for a study of his proposed retirement benefit system, said he will redraw the proposal this year and offer it as a substitute for Moynihan's plan.

Moynihan and Porter long have criticized a federal accounting system that allows the trust fund reserves to distort the size of the federal deficit. Although Porter gave Moynihan credit yesterday for kicking off a spirited national debate, he parted company with the New York Democrat over the proposed cut in the payroll tax.

"We should not be playing tax-cut politics with the Social Security system," said Porter, arguing that the payroll tax reduction would force future congresses to drastically raise income taxes or slash retirement benefits to meet the government's obligation to the Baby-Boom generation when it retires.

Recognizing the political appeal of Moynihan's tax cut proposal, many Republicans, including President Bush, have labeled it a cynical ploy designed to force the White House to accept a general tax increase and have warned that its advocates are endangering the future retirement benefits of millions of Americans.

Under Porter's proposal, the reserves now building up in Social Security, now about $65 billion, would be used to create Individual Social Security Retirement Accounts controlled by each taxpayer. The funds would be invested in relatively safe instruments, such as government bonds, and converted to annuities by each worker upon retirement. Participation would be mandatory, and early withdrawals would be prohibited.

The current Social Security system would become fully privatized once all of today's taxpayers are retired. In the meantime, Porter said, there would be a hybrid of the current Social Security system and the evolving private accounts.

In the Senate, Majority Leader George J. Mitchell (D-Maine) said Moynihan has made a "serious and important proposal" but expressed concern about its potential impact on the deficit. Mitchell said he is awaiting two staff studies analyzing the proposal's implications for the Social Security trust fund and the deficit and will not take a position until they are available.

But Mitchell said Moynihan's proposal "brought home in a very dramatic way the tremendous inequities of the American tax system" and what he called the "inconsistencies" of Bush's tax policies, which he described as "let the little people pay but cut taxes for the very wealthy." This was a reference to Bush's proposal to cut taxes on capital gains.

Minority Leader Robert J. Dole (R-Kan.) said he thinks that Moynihan's proposal will "self-destruct," especially since it prompts moves to raise taxes, such as a proposal from Sen. Ernest F. Hollings (D-S.C.) to levy a value-added tax, or national sales tax, to offset the cost of proposed Social Security and capital gains tax reductions. "He [Moynihan] brought the good news; Hollings delivered the bad news," Dole said.

Mr. MOYNIHAN. I would like to say that throughout the 1980's, this Senator, as either chairman of the Subcommittee on Social Security or ranking member, fought efforts to cut Social Security benefits on this floor. In 1981, the Reagan-Bush administration proposed a 40-percent reduction in early retirement benefits in the first 4 months in office. I came to this floor and said no to a 40-percent reduction for people retiring at age 62.

My amendment to stop the benefit cuts was tabled, or killed, by a vote of 49 to 48, with then Senator Quayle voting against me and for benefit cuts. By the end of the day, Senate Republicans joined with Senate Democrats in repudiating the Reagan-Bush proposals to cut Social Security.

We are doing what we said we would do. We are strengthening Social Security and restoring honesty and integrity to Federal finances. I do not think that that should be characterized as sleight of hand. I regret that. Perhaps the President regrets it. If so, we can leave it behind. But for the moment I had to make this statement. I thank the Chair for his courtesy and I thank the Senator from New Jersey for giving me the opportunity to make this statement.

I ask unanimous consent that an article in the current issue of the Economist be printed in the RECORD, which says—and I will conclude with this statement—that, as Mr. MOYNIHAN said in the report of the National Economic Commission last March, this present practice amounts to a stealthy substitution of regressive payroll tax for progressive income tax in paying for Federal spending. That might be described as sleight of hand.

I thank the Chair and I thank my friend from New Jersey.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Economist, Jan. 20, 1990]

TAXES: HIDDEN TREASURE

WASHINGTON, DC.—In starting a campaign to cut the payroll tax that pays for retirement benefits, Senator Patrick Moynihan has acquired strange political allies. Right-wing think-tanks cheer him on; his fellow Democrats keep an embarrassed silence. President Bush is in the awkward position of resisting a tax cut that would benefit all working Americans, while proposing in his 1991 budget a cut in the capital-gains tax, plus tax breaks for saving, both of which would mainly help the better-off. Mr. Moy-

nihan's move could make the payroll tax, not Mr. Bush's proposals, the focus of tax debate this year.

The payroll tax falls equally on employers and workers. The proceeds go into two trust funds, one that finances social security (old-age pensions), the other Medicare, the health-care programme for the old. After a 1983 report on the system's solvency from a commission of which Mr. Moynihan was a member, Congress approved a series of big increases in the tax. The latest, to a total of 15.3% levied on all pay below the cut-off level of $51,300 a year, came on January 1st. The rate is now 60% higher than it was in 1970.

The payroll tax wreaks havoc with marginal tax rates. True marginal tax rates are at their peak for two-earner couples making between $50,000 and $100,000 a year (see chart)—precisely the middle-income people who would best respond to the incentive of lower rates. America has one of the world's least progressive tax structures. The average proportion of income paid in tax by the poorest 50% of families rose in the 1980s by 6%, while for the richest 10% it fell by 10%. And thanks largely to higher payroll taxes, the share of federal taxes in GNP throughout the supposedly tax-cutting 1980s stayed unchanged at around 19.5%.

There are big annual surpluses in both the social-security and Medicare trust funds ($65 billion and $25 billion respectively this year, though the rising cost of health care means that the Medicare surplus will soon disappear). The social-security surplus is designed to meet the pensions of retired baby-boomers in the next century. But since it is invested in Treasury securities, it is not being saved but used to finance spending. As Mr. Moynihan said in the report of the National Economic Commission last March, this amounts to a stealthy substitution of regressive payroll tax for progressive income tax in paying for federal spending.

Mr. Moynihan now wants to roll back the January 1st increase and, by a further cut next year, to return social security from annual surpluses to a pay-as-you-go system (with a modest reserve). Getting rid of the bogus surplus would be much better than the administration's bogus plan to protect it after 1993 by using it to retire federal debt.

But cutting payroll tax runs into one huge obstacle: it would add $55 billion to the 1991 budget deficit. That would scupper any chance of meeting the Gramm-Rudman deficit target of $64 billion unless spending were cut or other taxes raised. Mr. Moynihan has disappeared to Africa without saying which he prefers, though it is generally assumed to be the second. His opponents fear that Congress might cut the payroll tax and ignore Gramm-Rudman (which can be suspended if GNP growth in two successive quarters is less than 1% at an annual rate—and the fourth quarter of last year probably met that test).

Regardless of GNP growth, it would plainly be wrong to increase the budget deficit. There are plenty of ways in which that can be avoided: bigger cuts in defense or other spending; higher income, petrol or excise taxes; or broadening the tax base to include fringe benefits or the full value of social security. Mr. Bush could find that using the deficit argument against the payroll-tax cut is no more effective politically than the same argument was against Mr. Reagan's tax cuts in 1981. A better strategy would be for him to use it as tax-cutting cover to disguise bigger tax increases elsewhere.

CLEAN AIR ACT AMENDMENTS OF 1989

The Senate continued with the consideration of the bill.

The PRESIDING OFFICER. The Senator from New Jersey.

Mr. LAUTENBERG. Mr. President, I rise in strong support of S. 1630, the Clean Air Act Amendments of 1989. The American people have made clear their desire to have clean air—air which is safe to breathe, which does not harm trees, lakes, and coastal waters, and which does not pose the kind of threat that a Bhopal-type accident, that killed and maimed thousands, to happen in the United States. S. 1630 provides the legislative underpinning to achieve these goals.

I want to express my appreciation to Senators BURDICK, BAUCUS, and CHAFEE for leading the effort to develop strong clean air legislation and bringing this bill to the floor. And I want to particularly commend our majority leader, Senator MITCHELL, who for a decade has been the conscience of the Senate on clean air. I believe that his unstinting efforts to develop clean air legislation and see that it is enacted will be rewarded this year.

Mr. President, this year we celebrate the 20th anniversary of enactment of the National Environmental Policy Act. NEPA establishes a firm recognition that each person should be able to enjoy a healthful environment. And that healthful environment depends on clean breathable air. Human life is dependent on it. So is all life. Without clearn air, we will fail to achieve all of the hopes that life has for each of us and the generations that follow. Unfortunately, numerous medical groups have concluded air pollution is causing a public health crisis. Air pollution may be causing as many as 50,000 premature deaths per year. And the American Lung Association has estimated that the United States spends $100 billion every year in additional health care costs due to air pollution exposure. EPA's implementation of the existing Clean Air Act has not resulted in the healthful environment called for by NEPA.

Mr. President, the findings of the American Lung Association are worth emphasizing because we hear so much about the cost of bettering our environment. One hundred billion dollars in health care cost. We should keep that in mind, because, as the debate proceeds, we will hear complaints the cost of clean air legislation is too high.

It is a familiar complaint. Down through the years, there has been a minority of voices telling Americans that the cost of better health was too high—the cost of better lives was too high.

We heard it when we took children out of sweatshops. We heard it when we gave workers a minimum wage. We heard it when we passed mine safety and factory safety laws. The price it was said, was too high.

And we have heard it every time we have moved to control environmental pollution. Mr. President, it is not the price of action that is not too high. It is the price of inaction.

Americans want cleaner air. They want us to pass a tough bill. They know that will mean some changes. They know that will mean adjustments. But, they know we have the ingenuity, and the creativity, to meet the challenge.

Those who say the cost of clean air legislation is too high are really saying something different. They are saying America cannot afford it, cannot afford the increased cost to protect the health of its people. Think of what that means. It is a message of lower horizons. It is a message of gloom. It is the kind of message that says America's economic strength can only be built if we continue to soil and damage our environment.

Mr. President, that is not the America we know. A sign of our progress as a nation is that with our increasing strength and increasing prosperity, we have achieved higher quality of life for our people. That is progress. And, with the passage of this clean air legislation, we will make a big step toward better, healthier lives. And it is about time we get on with the task.

The Clean Air Act authorization for appropriations expired in 1981 and since then the Congress has neither reauthorized nor strengthened the act. This is primarily the fault of the Reagan administration which first tried to weaken the act and when that failed, opposed every effort to strengthen the act.

To his credit, President Bush has made passage of clean air legislation a priority. This is a major advance over the Reagan administration position, and has helped provide the impetus for congressional action during this Congress. And the President's acid rain proposal represents a serious effort to reduce sulfur dioxide.

But simply being better than the Reagan administration, which was so hostile to environmental values, is not enough. Unfortunately, President Bush's proposal fails to provide the tough programs we need to address nonattainment and air toxics. And even his acid rain proposal inadequately controls emissions of oxides of nitrogen which play an important role in the generation of acid rain. S. 1630 provides the tough, comprehensive program we need.

Air toxics present a significant threat to public health and safety and to the environment. Air toxic emissions are too high—at least 2.7 billion pounds in 1987 according to the right-to-know data. That is roughly 10 pounds of toxic air emissions for every

man, woman, and child in the United States. And total air toxic emissions are up to five times higher when we account for sources of emissions not included in the Right-To-Know Program.

Air toxic emissions threaten our health. A 1989 EPA study estimated a national annual cancer incidence of up to 2,700 cancer cases from exposure to just 90 air toxics. This means that 190,000 now alive—2,700 annually times 70-year life span—are expected to contract cancer from exposure to air toxics. And EPA has identified 149 facilities where the risk to the most exposed individual is greater than 1 in 10,000. One plant in Texas poses a risk of cancer greater than 1 in 10.

Toxic air emissions also pose significant noncancer risks including respiratory disease and birth defects.

It is not surprising that as early as 1987, EPA concluded that air toxics pose a high risk of cancer and no-cancer health risks when compared to other sources of pollution.

And air toxics also threaten our environment.

Air toxics account for roughly 25 percent of the total toxic loading of the Great Lakes and up to 80 percent of the toxics in Lake Superior.

And a draft EPA report concludes that atmospheric deposition also may be an important source of toxics to estuaries and coastal waters. Toxics in our coastal environment cause tumors, reproductive failures, and growth and developmental abnormalities in fish and shellfish.

Finally, some chemicals are extremely hazardous and if not handled properly, pose significant risk of accidents.

According to EPA, there have been over 300 deaths and almost half a million people evacuated between 1982 and 1986 as a result of chemical accidents. And at least 17 of these events had the potential for more damage than occurred at Bhopal where 3,400 died and 200,000 were injured from a catastrophic release.

It is clear that the existing air toxics program at EPA is broken. In 18 years, EPA has regulated only a few sources of toxic chemicals.

The staggering amount of air toxics releases, together with the threat to public health and safety and the environment which they pose, and EPA's failure to act, make an overwhelming case to enact air toxics legislation.

S. 1630 includes tough air toxics legislation based on a bill which I, along with Senators DURENBERGER and BREAUX and others, introduced last April.

It addresses public health and safety, and protection of the environment.

It requires EPA to regulate categories of sources which release certain levels of 191 hazardous substances. Facilities emitting these air toxics in amounts above the established levels will be required to install the maximum available control technology. This is not just end-of-the-pipe technology; it can include process changes and materials substitution to reduce or eliminate the generation of toxic air pollutants and a prohibition on such emissions where achievable.

If after installation of this technology, remaining emissions present a significant risk of adverse effects on human health or a threat to the environment, facilities will have to further reduce their emissions to eliminate these risks.

For carcinogens, which have no safe level of emissions, facilities must reduce their emissions to levels which pose less than a 1 in 1,000,000 risk of cancer to the most exposed individual. Facilities which cannot achieve this level using all available technology can continue to operate as long as their emissions pose a risk less than 1 in 10,000. But facilities which cannot achieve the 1 in 10,000 level would be required to shut down.

S. 1630 also establishes a program for addressing the problem of the soup of hazardous air emissions in urban areas. According to EPA, the cumulative impact of smaller sources in our urban areas represents a large portion of the risks posed by air toxics. For example, the lifetime risk of cancer from toxic air emissions in Chicago is 3 in 1,000. The bill requires EPA to regulate emissions from sources of the 10 toxic pollutants which pose the greatest threat to public health in the largest number of urban areas.

S. 1630 also requires EPA to establish a program to monitor atmospheric deposition of toxics into the Great Lakes and into coastal waters.

Finally, the bill addresses the public safety concerns posed by catastrophic releases of extremely hazardous substances. It builds upon the program we created in the emergency planning and community right-to-know law which gave communities information about facilities so that they could prepare to respond to an accident.

S. 1630 requires facilities handling certain levels of extremely hazardous substances to prepare hazard assessments to determine the potential for an accident. This will help prevent such accidents from occurring.

The bill also establishes an independent Chemical Safety and Hazard Investigation Board, modeled after the National Transportation Safety Board. We need an independent board to ensure that chemical accidents will be subject to thorough investigations. The Chemical Board will investigate and report on chemical accidents involving death, serious injury, and substantial property damage and make recommendations to EPA for action to prevent or mitigate chemical accidents. EPA must respond in writing to each recommendation, EPA is given authority to promulgate accident prevention regulations, and EPA must require leak detection systems.

So this bill establishes a comprehensive program to reduce the number and extent of chemical accidents plaguing our Nation. The bill makes a number of significant improvements over the President's bill.

The President's bill fails to require action to be taken to protect the environment. It fails to establish a specific program to address urban air toxics. It has a meager accident prevention program without an independent review board and without the required preparation of hazard assessments. It only requires that EPA establish technology standards for 50 percent of the sources of toxics.

And the administration's bill only requires EPA to eliminate unreasonable risks. This requires EPA to balance public health protection against costs. Under the Toxic Substances Control Act which requires regulation of chemicals which also pose unreasonable risk, EPA has regulated just two pollutants since 1976.

S. 1630 establishes a public health standard and prohibits this balancing.

We also need to establish a tough, comprehensive program to rid our air of the ozone, carbon monoxide and particulate pollution which plague our Nation.

These pollutants threaten the health of our citizens and our environment. Roughly 150 million Americans live in areas where ozone levels exceed the existing ozone standard. Some citizens have been exposed to ozone levels which exceed the standard established by the Occupational Health and Safety Administration to protect the health of factory workers. This, even though the ozone standard was supposed to be achieved by 1977. And unless tougher measures are adopted to reduce the precursors of ozone, volatile organic compounds and nitrogen oxides, ozone pollution is likely to worsen because of the substantial increase in the use of motor vehicles in the future.

Millions of Americans also live in areas that fail to meet the carbon monoxide and particulate public health standards.

Violations of the ozone health standard can result in lung function impairment, chest pains, shortness of breath, coughing, nausea, throat irritation, increased susceptibility to respiratory infections and in high enough levels, death. Young children are particularly susceptible to both acute and permanent effects of ozone pollution. Ozone pollution also can result in adverse effects on crops, forests, and materials.

Carbon monoxide robs the body of needed oxygen and violations of the health standard can result in reduced

work capacity and fetal effects. Particulate matter can produce a range of effects from temporary reductions of lung function and increased respiratory symptoms to aggravation of existing respiratory and cardiovascular disease, cancer, and premature death.

In 1988 in New Jersey, the ozone standard was violated 45 days, the highest number of violations in 5 years, with levels over 66 percent higher than the ozone standard. The entire State is classified as a nonattainment area for ozone. Northern New Jersey has carbon monoxide levels which exceed the existing standard by over 50 percent. And this despite having some of the toughest air pollution controls in the Nation. Moreover, New Jersey would be in noncompliance even if all emissions in New Jersey were eliminated for a day because of ozone and ozone precursor pollutants from areas upwind of New Jersey.

And recent evidence demonstrates that the existing ozone standard may not be fully protective of human health. Long-term exposure to levels of zone 50 percent below the existing standard have been shown to adversely affect lung function.

Unfortunately, President Bush's proposal fails to call for the necessary measures. According to the State and Territorial Air Pollution Program Administrators [STAPPA], the provisions of the President's bill "* * * fall far short of what is needed to expeditiously attain and maintain the National Ambient Air Quality Standard for ozone." A similar finding was made for the President's carbon monoxide control program. And concerning the President's program to control emissions from motor vehicles, the largest source of both ozone and carbon monoxide pollution, STAPPA concluded that the program "* * * is inadequate and represents the weakest part of the administration's clean air proposal."

S. 1630 includes strong measures to bring the Nation into attainment with air pollution standards. It is also tough, but technologically and economically feasible standards to reduce automotive emissions. Auto emissions result in 50 percent of the Nation's hydrocarbons, and 75 percent of its carbon monoxide and are believed to be responsible for 50 percent of all cancer deaths caused by air toxics. Despite significant reductions in emissions from cars, remaining emissions still cause a large part of the Nation's ozone, carbon monoxide and air toxics problems.

And vehicle miles traveled are growing rapidly. Overall mileage may double between now and the year 2000. This means we need continued reductions in auto emissions which will be achieved by the bill's second round standards if we are to achieve the clean air public health standards.

Finally, and most important to my State, S. 1630 includes a strong program which I advocated to regulate pollutants transported from upwind States. Attainment areas within the Northeast Transport Region would be required to adopt reasonably available and cost-effective controls.

We also need to be concerned about municipal solid waste incineration. Most States have incineration facilities for municipal solid waste either on line or planned. In 1986, 6 percent of municipal solid waste was incinerated and this figure is expected to rise sharply. While the choice of incineration is a State and local decision, the Federal Government has a role to ensure that air emissions and ash disposal do not pose threats to public health and the environment.

S. 1630 includes a strong program to control emissions from incinerators and ash disposal. It also provides that incinerators cannot be permitted unless the jurisdictions served have adopted programs which are certified by the State to achieve a 25-percent solid waste recycling rate. Finally, the bill includes a provision I offered as an amendment to the bill in the last Congress to require EPA to publish guidelines identifying items that should not be incinerated because of the threat that incineration of those materials poses to public health.

Mr. President, we also need to reduce emissions of pollutants which cause acid rain. Acid deposition is caused by emissions of sulfur dioxide from the combustion of fossil fuels containing sulfur and nitrogen oxides which result from the combustion of fossil fuels. These pollutants form solutions of sulfuric, nitric, and other acids in the atmosphere, which can be carried by winds as small particles or droplets of water for hundreds of miles. Acid rain can impair visibility, corrode structures and materials, pollute lakes, streams and coastal areas, reduce the growth rates of trees and crops and increase respiratory problems in humans. A 1987 EPA study concluded that just 8 of the 44 potential benefits from an acid rain program similar to the one in S. 1630 would result in saving $5.2 billion a year in the costs of acid rain.

Rain in New Jersey has been measured at levels at least 70 to 80 times more acidic than natural rain. New Jersey streams and lakes are vulnerable to continued acid deposition. There is evidence of damage caused by acid rain in lakes along Kittatinny Range in northeast New Jersey. Many other lakes throughout the Highlands region are near the limits of their natural buffering capacities. And the Pinelands, which has excess sulfate and nitrate in its soils, is vulnerable to any increase in acidity. One study already shows a 30-percent growth reduction among roughly two-thirds of the pitch pines in the Pinelands.

In addition, acid rain has been linked to elevated levels of nitrogen in coastal waters. The effects of excess nutrients in bodies of water are anoxic conditions in bottom waters, blooms of nuisance and sometimes toxin-producing organisms, reduction in water clarity, and degradation in species composition of the aquatic community. Preliminary estimates are that atmospheric nitrogen entering estuarine watersheds is responsible for roughly one-third of the nitrogen in the New York Bight and the Chesapeake Bay.

S. 1630 establishes the program we need to address the acid rain problem. It provides for a 10-million-ton reduction in sulfur dioxide emissions from 1980 levels by the year 2000. And it requires a 2 million ton reduction in nitrogen oxides from 1980 by the year 2000. To ensure that emissions of these pollutants do not increase after the year 2000, the bill caps emissions at the year 2000 requirement and establishes a program of emissions allowances to achieve cost-effective reductions in emissions.

One thing the bill does not do is provide for cost-sharing. Pollution generating States should pay for cleanup just as we have in New Jersey and other Eastern States. In fact, the largest sulfur emitting States in the States have lower electric rates than the national average.

Finally, the bill addresses the problems of global warming and stratospheric ozone depletion. While there is some dispute about the timing and extent of global warming, there is little question that we are heating up the Earth which may lead to climate change. This change could lead to extinction of plants and animals which are unable to adapt to rapidly changing conditions, adverse effects on agriculture because of reduced soil moisture content and altered storm and precipitation patterns, a rise in sea level of at least 1 foot which would inundate an area 100 to 200 feet from current coastlines and an increase in global average temperature of 3 to 11 degrees Fahrenheit.

The bill addresses global warming in a number of ways. First, the bill establishes carbon dioxide emissions standards for automobiles. Motor vehicles produce one-quarter of the carbon dioxide emitted in the United States and we are responsible for 20 percent of the worldwide carbon dioxide emissions. The standards in the bill will result in an average fuel efficiency of 33 miles per gallon in 1996 and 40 miles per gallon by 2000. These are standards which the Department of Energy says are achievable with available technology.

This increase in fuel efficiency is needed just to offset the increase in

vehicle miles traveled. Without the carbon dioxide standard and with the continuing growth in vehicles miles traveled, carbon dioxide emissions from cars will increase 35 percent by the year 2005.

Second, the emissions cap for emissions of acid rain precursors will put a premium on energy conservation as a means for reducing these emissions. Increased energy conservation will lower emissions of carbon dioxide.

Finally, the bill establishes a regulatory program to control substances including chlorofluorocarbons and halons which destroy the stratospheric ozone layer and also act as greenhouse gases. The destruction of ozone in the stratosphere increases the amount of ultraviolet light reaching the Earth. This will lead to adverse human health effects including increased skin cancer and cataracts and harm to crops and marine animals. CFC's and related chemicals account for 15 to 20 percent of the predicted greenhouse effect and the United States is responsible for one-third of all CFC emissions.

There is one provision in the bill which I do strongly oppose. This concerns the mandatory use of gasohol as an oxygenated fuel within carbon monoxide nonattainment areas.

As reported by the committee, this provision could have significant, counterproductive impacts. The provision is a mandate for a greatly increased use of ethanol-based fuel—gasohol. While the use of gasohol can result in the reduction of carbon monoxide levels, its increased volatility can also contribute to the ozone problem faced by many communities.

The committee provision mandates, through environmental legislation, a greatly increased market share for gasohol, which is already highly subsidized through several sources, including an exemption from 6 cents of the 9-cent Federal gas tax. This exclusion already costs the Federal Highway Trust Fund [HTF] approximately $500 million in revenues annually. In turn, the mass transit account of the HTF, which is also supported by the gas tax, suffers. The impact on revenues from the committee provision has been estimated at between $300 million to $1 billion annually. Therefore, through an expanded, mandated use of gasohol, Federal support for mass transit, which is so vital to the efforts of areas like northern New Jersey to meet clean air goals, would be reduced.

Much of this problem could be alleviated by allowing other carbon monoxide-reducing fuels to be used by nonattainment areas. That was the intent of an amendment I offered during committee consideration. By setting a minimum oxygen content of fuels during winter months at 2.7 percent, other fuels, such as methyl-tertiary-butyl-ether [MTBE], could be used in nonattainment areas. MTBE is not exempt from the gas tax, and therefore does not have the draining impact on public transportation and highway spending. Importantly, while providing virtually the same carbon monoxide reduction benefits as gasohol, MTBE also can reduce hydrocarbons, and does not contribute to the ozone problem.

As stated by the State and Territorial Air Pollution Program administrators, any oxygenated fuels requirement should be fuel-neutral, not favoring the use of one beneficial fuel over another. Unfortunately, the committee provision does not meet this test. In failing to do so, I believe its environmental benefits are outweighed by its disadvantages. Consequently, I will be working to improve this provision before the Senate completes action on the clean air bill.

Mr. President, we need to act quickly to pass S. 1630. I urge my colleagues to support its adoption.

Mr. LIEBERMAN. Mr. President, I am pleased to rise in support of Senate bill 1630 and particularly to do so after the exceptional comments of my friend and colleague from the State of New Jersey and in the presence of the senior Senator from Montana, who has been such an outstanding leader in the cause of cleaner air and a better environment generally.

S. 1630 would for the first time in a dozen years create new restrictions on the pollution that continues to degrade our air, our world, and our health.

The new Clean Air Act addresses such diverse problems as acid rain, urban smog, air toxins, catastrophic chemical accidents, municipal incinerators, global warming, and chlorofluorocarbon emissions. All are connected, however, by the threat they pose to our health and our lives.

I am extremely fortunate to have been a participant in the work of the Environment and Public Works Committee during the year that the Clean Air Act will become law. For 8 years, my colleagues have labored on this legislation against strong opposition from the previous administration and special interests that have a stake in the status quo. It is clear to us all that the status quo must change.

In the Clean Air Act of 1970, Congress resolved that all Americans would breathe healthy air within a decade. That goal was not achieved. In the years since the Clean Air Act was last amended—back in 1977—the air has become dirtier and more dangerous. Our uphill climb against the ravages of pollution has been turned into a downhill fall, and only now are we recognizing the real impact of our failure to act.

The testimony heard by the Environment and Public Works Committee demonstrates that we are paying a high price for pollution.

The Nation's leading health experts—from the American Lung Association and the Academy of Pediatrics to the American Public Health Association—all testified before Congress that the Nation faces nothing less than a public health crisis because of air pollution. I agree with our distinguished majority leader, who said at one of our early committee hearings, "If every American parent comprehended the threat to his or her child from air pollution, they would overwhelm Congress with the demand for action."

It is time to tell the American people the truth about the danger they face. Today, 150 million Americans are living in areas which fail to meet Federal health standards. But even this estimate may understate the extent of the problem. The Natural Resources Defense Council testified before the Environment Committee that in many large cities, unhealthy levels of smog occur about twice as often as EPA reports.

Research conducted at Harvard University indicates that air pollution may be a contributing factor in 1 out of every 20 deaths in the United States.

The past president of the American Public Health Association concluded that acid rain causes up to 50,000 premature deaths each year. Without action to control acid rain, he says, the number could grow to as high as 100,000 to 150,000 premature deaths a year.

There has been a lot of talk, both from the administration and from people in the private sector who want to weaken the bill before us, about the cost of Senate bill 1630. But all the talk about the economic impact has missed a very important point: you can't talk about the cost of a new Clean Air Act without considering the cost of our failure to pass a strong bill.

Air pollution costs Americans billions of dollars each year because of its effect on land and water and, most important, our health.

The American Lung Association has told Members of Congress that the health costs of pollution from such pollutants as ozone and carbon monoxide are—at a minimum—$100 billion a year. The group says that health care costs associated with pollution from cars and trucks alone amount to $93 billion a year.

Sulfate pollution is estimated to cost Americans as much as $432 billion in annual health care costs.

Add to these figures the health impact of acid rain, air toxins and CFC's and one can plainly see that the cost of doing nothing about air pollution is far higher than the cost of enacting a tough, new Clean Air Act.

Certainly some businesses and industries will have to pay more to comply with this legislation. But their accountants and planners must know that a large part of the cost of doing business in America today is associated with health care.

Members of Congress frequently hear from employers throughout this country who are extremely concerned with the rising costs of health care for their employees. In 1989, health care cost the United States more than $600 billion—about 12 percent of our gross national product. Because of the high price of health care, some 37 million Americans are not covered by health insurance—which means, of course, that when they become ill, all of us pick up the tab for their care. Rising health care costs may further threaten the 160 million Americans who do rely on employer-sponsored health insurance coverage.

So, look at the new Clean Air Act as a health care bill. It will help us dramatically reduce the cost of health care in America by reducing the amount of illness, disease, and death that air pollution causes. Taken in this context, we might well call Senate bill 1630 the "Business Health Cost Reduction Act of 1990."

Mr. President, I turn now to a discussion of some of the specific features of this legislation.

OZONE POLLUTION

Ozone pollution, which is caused mainly by emissions from so-called mobile sources, such as automobiles, is the country's most persistent pollution problem. It can cripple our lungs and cause emphysema and chronic bronchitis. In some parts of the country, breathing the air is as damaging as smoking cigarettes.

The most vulnerable among us are children, older citizens, asthmatics and people with pulmonary diseases. Nearly half the pediatricians surveyed in a recent study, The American Asthma Report, reported treating more asthmatic children today than 5 or 10 years ago.

Healthy adults can be affected by ozone pollution as well. In polluted Los Angeles, researchers found severe lung lesions and chronic disease in one-fourth of the 15- to 25-year-olds they studied.

Carbon monoxide, also emitted by automobiles, is potentially lethal to humans. It reduces the ability of blood to deliver oxygen to the body's tissues. Fetal exposure to even modest levels of carbon monoxide can lead to permanent brain damage. Nine million Americans suffering from heart disease are vulnerable to carbon monoxide pollution; elevated levels of the pollution can trigger heart attacks.

In light of these facts, it is clear we must do more to control motor vehicle emissions. In my view, this is one of the most important contributions of the legislation before this body today. Cars and trucks emit 40 to 50 percent of the Nation's hydrocarbons, 45 percent of the nitrogen oxides, and 90 percent of carbon monoxide. They also contribute up to 30 percent of all carbon dioxide emissions in the United States, which contribute to global warming.

Automakers have made a great deal of progress in controlling emissions from tailpipes of automobiles in the last 20 years. We should be grateful to them—and to the legislators who enacted laws requiring emission controls—for that. But the reductions in the amount of pollution emitted per car has been more than offset by the dramatic increase in the number of cars on the road and the number of miles each car is driven.

That trend will continue. We heard testimony in our committee that the amount of miles Americans will travel by car will continue to increase at a rate of 25 billion miles per year—that's equivalent to a million car trips around the planet Earth. The total number of vehicles is estimated to grow by 76 percent by the year 2010.

Without further controls, emission levels from cars—which are already unacceptable—will cause even greater damage than it does now.

The bill before us will require not only immediate improvements in tailpipe emission controls, but will require additional improvements down the road. It does ask a great deal of the auto industry, but it does so only because automobiles constitute such a significant part of the pollution problem we face.

The requirement for a so-called second round of tailpipe control measures—to be implemented in 2003, has been severely criticized by industry and the administration. On the other hand, environmentalists, health organizations, and State and local governments from around the country, have praised the inclusion of this additional set of controls on auto emissions.

There are several myths propounded by the auto industry and its supporters that we must deal with at the start. The first myth is that the standards are technologically infeasible.

The California Air Resources Board disagrees. In fact, California has already taken steps to introduce standards twice as strict as those required in the committee bill. California is asking the auto industry to meet these higher standards by 1997.

What is amazing to me is that the auto industry claims it cannot technologically meet the demanding standards set forth in the bill when, in fact, many of the cars it produces already certify that they can meet these standards today, for vehicles traveling up to 50,000 miles.

More significant, the manufacturers of motor vehicle emission controls—the people who will actually make it possible for the auto industry to meet the new standards—say that technology will keep pace with the legal requirements set forth in our bill.

The second myth is that this aspect of our legislation is too expensive; the economic tradeoff is not worth the effort. This myth is based on an underlying myth—the EPA says the cost of implementing the stricter emission controls would amount to $500 per car. Using this figure, others calculate that our bill increases the cost of reducing ozone by $6.5 billion a year over the President's bill.

I do not believe it will cost $500 per car to comply with the new Clean Air Act. The EPA estimate is apparently based on the assumption that the catalytic converter in every car would have to be replaced during the vehicle's lifetime. But the manufacturers of emission controls and the State of California have testified that improvements in vehicle technology, fuels electronics and catalysts should enable cars to achieve the bill's standards without having to install two catalytic converters in each automobile. The California Air Resources Board estimates the overall cost of achieving the second round of tailpipe standards at about $122 to $132 per car. This substantially reduces the cost of the committee bill.

The third myth is that the standards are not cost effective; in other words, the cost per ton of emission reductions is too high when compared with other strategies.

The correct data reveals precisely the opposite: The second round of automobile standards is among the most cost-effective strategies for controlling the pollution that will remain in the year 2003. The additional emission controls contained in our bill—as opposed to the President's bill—will according to the American Lung Association remove 243,192 tons of hydrocarbons from the air each year; 13.9 million tons of carbon monoxide; and 216,170 tons of nitrogen oxide.

If we don't take that amount of pollution out of car emissions, where will we be able to do so? If not cars, then States will have to cut emissions from shoe factories, bakeries and other sources of similar pollution—at far higher cost and inconvenience to business and consumers. In the extreme—some have testified that if we don't cut pollution from cars—we'll have to examine eliminating lawn mowers, dry cleaners, and personal deodorants. Experts testified that government would have to turn to restrictions on items like these if we don't squeeze pollution from cars.

Finally, we must not forget to figure in the cost of health care, as I have noted earlier. Motor vehicle pollution costs Americans billions each year; in

my State of Connecticut, the figure is $1.6 billion in health care costs associated with motor vehicle emissions. I believe Americans are willing to pay $130 more for a new car in order to help keep themselves and their children free of the damage of air pollution to their health—damage that can cost them far more in the future than the entire cost of their car.

TRANSPORTATION CONTROL MEASURES

In addition to strict controls on emissions from motor vehicles, the Senate bill recognizes that, for some parts of the country, it may become necessary to implement transportation control measures to reduce our reliance on the automobile.

There's a lot of talk about how insulated Washington is from the rest of the country, but one thing we share in common with many of our urban and suburban constituents is traffic. Go out to the Shirley Highway or to the beltway and see what the proliferation of automobiles is doing to our air. That pattern of gridlock is being repeated in region after region across the country.

The GAO says that urban congestion levels will increase nearly 300 percent over a 20-year period unless we take steps to change our ways.

The committee bill requires that transportation planning decisions must be evaluated in relation to their impact on air quality. This kind of connection is important if we are to get control of motor vehicle use in the years ahead. State and local air pollution control managers agree. In testimony before the environment, their representatives said:

> Significant reductions in vehicle miles traveled are sorely needed in many ozone and carbon monoxide nonattainment areas. Unless transportation projects are evaluated based upon their ability to assist in attaining and maintaining the standards, adequate reductions will be difficult, if not impossible, to achieve.

Even a modest improvement in transportation control measures could have a dramatic impact, because at present more than 80 percent of our population commutes to work in automobiles. If the average commuter passenger load were increased by just one person, we would save 33 million gallons of gasoline each day, with a commensurate reduction in pollution.

Our legislation would require EPA to provide guidance to States and localities on the benefits that can be achieved from transportation controls. It would also encourage severely polluted regions to adopt transportation controls, though the decision as to what controls to implement would be left up to the States. Our bill does not impose any requirement for taxes, rationing, or tolls.

The inclusion of transportation controls in the new Clean Air Act enjoys the support of the Clean Air Working Group, made up of 2,000 small and large businesses, the Clean Air Coalition, the umbrella group of environmental organizations, and State and local air pollution authorities.

ACID RAIN

The critical element of the acid rain bill reported by the committee is the cap on future emissions of sulfur dioxide. Without a cap, the gains from any emission control technologies could simply be wiped out by a proliferation of acid rain sources.

There will be a strong effort mounted by those who want to eliminate the cap. Any such amendments must be defeated if the new Clean Air Act is to preserve its integrity as a strong antipollution measure.

Opponents of the cap will argue that the economic growth of this country is dependent on increased acid rain emissions—they may not say it in quite so many words, but that will be their underlying message. But the statistics do not support this proposition. In fact, since 1970, electricity sales have risen 76 percent. The GNP went up 59 percent and total coal use is up 50 percent. This all occurred during a time when environmental protection measures were being implemented all over America.

Because of environmental controls, emissions of sulfur dioxide actually decreased by 28 percent over the past two decades, while the economy underwent a tremendous boom. Clearly economic growth and environmental protection are not mutually exclusive.

More important, for the long-term protection of the planet, this bill is important because of its emphasis on energy conservation. The United States bears an especially heavy responsibility because of its contribution to global warming. In 1988, U.S. fossil fuel use accounted for close to a quarter of the world's carbon dioxide emissions from fossil fuels. Electric utilities are the largest source of carbon dioxide, emitting about 35 percent of the total. We can exercise little authority in our discussions about the global warming problem with our neighbors of the world if we do not act to put our own house in order.

The bill's section 403 requires that Federal facilities in certain areas devote some of their energy costs to such alternative sources of energy as solar, thermal, photovoltaic, and fuel cell technology. Such Government promotion of these systems will help put our country at the crest of a wave of the future. There is no doubt that the industries of the future will come to rely on new sources of energy.

TOXIC AIR POLLUTANTS

Senate bill 1630 creates important new requirements in the area of toxic air pollutants. Tons of chemicals are emitted into the atmosphere of this country every day, and their total impact on human health is not known, though we can safely conclude that it is not good.

Toxic air pollutants take an annual toll of thousands of cases of cancer, acute illness, and chronic disease. EPA has concluded that 200,000 people alive today will get cancer because of these emissions. The risk is particularly high for those who live in urban areas, where one excess cancer death for every 1,000 persons is not unusual.

I was particularly struck by a description of life in an industrialized area of the Appalachian Mountains which appeared in the Washington Post last spring. In a region surrounded by large chemical companies, the air is so polluted that screens rust out, paint peels off cars, and gardens wilt. The lung cancer death rate is twice the national average. One resident described the situation this way:

"With what we breathe, what would it hurt to smoke? You wake up with a headache. You get up and start in coughing and hopefully your sinuses will clear. You have laryngitis and you just ache all over * * *. The only thing free in this world they ruined: the air."

Toxic emissions also can cause serious illnesses besides cancer, including birth defects, damage to the brain and nervous system, reproductive disorders, and genetic mutations.

The chemical industry and others will say our bill is too tough. But the toxic air pollutants portion of Senate bill 1630 is a carefully crafted compromise. EPA's own analysis of the bill concludes that most industries will be able to meet the bill's standards without an undue cost.

The President's bill does nothing to define what kind of risk from toxic pollution is unacceptable. It simply leaves EPA with the discretion to determine what constitutes unreasonable risks. EPA has that kind of authority in the field of pesticide controls, and look at the results: 18 years of living with Alar in our apples; two decades of EBDC use on a wide variety of our fruits and vegetables. The discretionary standard is so loose and so vague as to render it virtually meaningless.

Finally, the toxic air pollutants portion of the committee bill contains an important feature absent from the President's bill: A provision to prevent, detect, and respond to accidental releases of chemicals. We need an independent Chemical Safety Board to deal with the threat of chemical accidents, just as we need the National Transportation Safety Board to deal with airline and train disasters.

This Board will have the authority to investigate catastrophic accidents and make recommendations to EPA to reduce the risk of accidents in the future. The NTSB, in operation since 1967, has made a dramatic difference in the safety of transportation in

America. It is time for us to create a Chemical Safety Board to promote the safer manufacture and use of chemicals in this country. One thing is clear: if we have a Bhopal-like disaster in America, Congress would create a Chemical Safety Board within weeks after the chemical clouds dissipate. Why wait for such a tragedy? In fact, chemical accidents are happening with disturbing frequency, and people are getting sick and dying because of them. A Chemical Safety Board is a simple, effective way to deal with this growing environmental problem.

Mr. President, there are many other details of this new Clean Air Act which are important for the protection of our environment and our health, and I know we will be debating them in the days ahead. I commend our majority leader for his longstanding efforts to enact legislation such as this; the fact that we are considering it today is due in large part to his persistence and his dedication to creating a cleaner America.

I also salute our committee chairman, the senior Senator from North Dakota, for his leadership and his determination to see clean air legislation rise to the top of the national agenda. And we are all indebted to the distinguished senior Senator of Montana and Senator CHAFEE for their tenacity and knowledge of the intricacies of this very complicated field of pollution control; I look forward to working with them as this debate continues.

Mr. President, the American people want clean air. They want a new Clean Air Act. Let us give them one that we can be proud of, and they can depend on. Our efforts will not bear full fruit for many years to come but, rest assured, if we fail to enact as strong a bill as possible, the fruit of this labor will sour, and air more polluted than ever will be the health legacy of our work.

Senate bill 1630 is one of the most important bills to come before this body in many years. Coming, as it does, at the beginning of a new decade, let us work on it with the knowledge that at the end of this decade we want a world that is cleaner and healthier for all our children and grandchildren.

I yield the floor.

The PRESIDING OFFICER. The Senator from Arkansas.

Mr. PRYOR. Mr. President, I ask unanimous consent that I may speak as if in morning business?

The PRESIDING OFFICER. Is there objection? Without objection, it is so ordered.

Mr. PRYOR. Mr. President, I have consulted with the distinguished manager of the bill, and, at the moment, there are no other speakers on the Clean Air Act. I understand the Senator from Michigan [Mr. LEVIN] will be on the floor very shortly to do so.

Mr. President, while on the floor, I have been listening to the distinguished Senator from Connecticut in his statement, and I must say, very detailed statement, relative to the Clean Air Act.

I would like to take this time to compliment this individual Senator. For many, many years he has been involved in this fight in his home State and now as a Member of the U.S. Senate. I compliment him on his knowledge and also on his very, very fine presentation.

In addition, I compliment the distinguished Senator from North Dakota [Mr. BURDICK], the chairman of the committee, where this legislation originated.

I compliment, as did the Senator from Connecticut, the distinguished majority leader, Senator MITCHELL, for his long fight in this effort and who ultimately has seen his dream become a reality. It is now on the Senate floor. It is being debated.

No one could have been chosen who would be better qualified than the distinguished Senator from Montana [Mr. BAUCUS] to handle this very complex, lengthy, and, I must say, controversial piece of legislation.

Approximately 1 year ago, I had the privilege of traveling with Senator BAUCUS. I asked Senator BAUCUS what he was reading. It appeared to me to be about an 18-pound notebook. He said, "I am preparing and studying for the debate on the Clean Air Act."

I doubt there are many more emotional issues that have come before the Senate and once again to work out the various interests and to handle each State's and each region's various problems as we go into the full-scale debate on the Clean Air Act. Once again, there is no one more highly qualified, more knowledgeable or better suited to deal with this issue than my friend, the distinguished Senator from Montana.

A PEOPLE'S CORPS

Mr. PRYOR. Mr. President, in recent weeks awesome global changes that we have witnessed have given rise to a new phrase in this body, the "peace dividend." Only weeks ago we were not even thinking about such a possibility. Now it has become a part of congressional and public vocabulary.

The distinguished Republican leader, Senator DOLE, has in recent days thrown out an idea of cutting the top five recipients of our foreign aid program and sending the 5 percent to Eastern Europe. The President only this morning in his press conference discussed aid to Panama. Poland and Hungary have already been targeted to receive American foreign aid.

Mr. President, I rise this morning to say that we should be very cautious about starting new programs of massive foreign aid to these newly liberated countries. Even as good or altruistic as our motive may be, I fear our infusion of dollars at this time is premature and possibly will contribute to the instability of the present unstable political environment in those countries.

Most of these countries have yet even to adopt a constitution. Their knowledge of writing the basic rules and laws has not yet been tested. A plan of distribution of American aid, priorities of need and assistance of seeing our dollars hitting the target, is today nonexistent. We as a country do not have the money. Akin to revenue sharing, there is no revenue to share. Today with America's elation and hopes for a new world, there is also some frustration. We as a people want to make a positive response. We want to extend our hand in friendship and share with Eastern Europeans the blessings of liberty. The question is how do we do it?

Yes, we do have a deficit of dollars, but we do have a surplus of good Americans who are willing to give their time, their resources, their wisdom and skills in sharing, volunteers, Americans from all walks of life.

In the past weeks, in my home State of Arkansas, when I stated over and over again that we should send people not dollars, the response was truly overwhelming, personifying, I think, American generosity at its best. A dentist in Benton, AR, said, "Here is my card. I will give a year." A school teacher came up to me in Little Rock and said, "Senator PRYOR, let me give a semester." An engineer in Jacksonville said, "Put me down for 6 months." An irrigation expert in Pine Bluff said, "Please let me go."

There are hundreds, of retired citizens throughout America who thirst once again for additional challenges. We should tap that resource. Today there is an army of Americans with big hearts, special skills to share. They are ready, they are willing, and they are able to become a peoples corps, representing the best of what America is all about.

Senator GORTON yesterday on the Senate floor touched on such a thought. It is truly a concept which all of us should explore. Let us encourage the leaders of business, of industry. Let us call upon organizations who represent agriculture. Let us take the various professions or ask the various professions to become a part of a true American experience of sharing.

We do not need governments or bureaucracies or bureaucrats to intervene and confuse. We do not need misguided dollars being sent to Eastern Europe. What we do need is Americans to help make their dream become tomorrow's reality.

Mr. President, perhaps the Benton, AR, Lion's Club or the Rotary Club could sponsor the dentist who volunteered to go. What about the Arkansas Education Association sending the teacher? What about the local farm bureau? They might even sponsor the irrigation expert. Maybe we can use our surplus postal equipment to help create a new postal system, or give them this equipment which will be surplus in just a year, to help them, to inspire them to create a better system of communication. Perhaps the sharing of knowledge in setting up a telephone system would be a major contribution in some of these countries.

The possibilities, Mr. President, are endless. Our goal should not be the Americanization of Eastern Europe but, rather, the realization that our great country shared at a moment of need our greatest resource—our people and their ingenuity.

In the days to come, I have scheduled several meetings with the U.S. Chamber of Commerce, with the Business Roundtable, the International Executive Service Corps, and farm organizations to help kick around and develop such ideas for such a plan, because the people's corps could truly represent the soul, the strength and the heart of America.

Mr. President, I ask unanimous consent that an article from the Arkansas Gazette, dated January 16, 1990, which relates to this matter be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Arkansas Gazette, Jan. 16, 1990]

PRYOR HAS EAST BLOC AID IDEA: USE WORK, NOT MONEY

(By George Wells)

U.S. Sen. David Pryor called Monday for an "Eastern European peace corps," rather than massive financial aid, to help the new non-communist governments of Eastern Europe.

"An Eastern European peace corps made up of American business people, American students, American teachers and American volunteers could have more impact in the next 12 months than all the billions of dollars we might send," Pryor said.

"And, I might add, we don't have those billions of dollars to send," he said.

After his talk to the Southwest Little Rock Rotary Club, Pryor wasn't comfortable with the name "peace corps" for his idea—it dredged up images of hippies who joined the official Peace Corps in the 1960s—but he was excited with the idea.

"If I weren't doing what I'm doing, I'd go," he said in an interview. "I'm going to encourage one of my sons to give a year of his life if this is started."

Actually, Pryor said, the idea was his wife's. "Barbara came in while I was shaving this morning and said, 'We need a peace corps in Eastern Europe,' and that's where it came from," the senator said.

"I think a lot of people would be willing to give a year of their life to go into these countries and help," he said.

In his speech, Pryor floated the idea as an alternative to financial aid.

"I think we should be making a very strategic mistake if we gave them any dollars or any weapons," he told the Rotarians. "They've not asked for weapons, but they will ask for money."

What the U.S. can and should give these countries "is something equivalent to the old Peace Corps made up of 5,000 volunteers," Pryor said.

Such volunteers could go in and "teach them government—they have no constitutions, not only do they have no constitutions, they don't even know how to write laws," he said.

"We can present them our way of life but not attempt to dictate to them to accept our way of life," Pryor said, "but to expose to them the opportunities that we have had and have been given under a free enterprise system and how it has made us the greatest economic power on the face of the earth."

Pryor also reflected on the "volcanic" changes in Eastern Europe last year.

He said the changes were made possible by two people—Lech Walesa, the Polish labor leader who founded Solidarity, and Soviet President Mikhail Gorbachev.

At the beginning of the 1980s nobody in the West had heard of either man, Pryor said, and at the end of the decade the face of Europe was changed because of what they had done.

Walesa was an unemployed electrician at the Gdansk shipyards who was fired for speaking about workers' rights, Pryor said, and Gorbachev was a "fifth level bureaucrat in the Agriculture Department.

"With Gorbachev challenging the system from within and Lech Walesa challenging the system from without, these two personalities provided the opportunity and the inspiration for people to do things they would never have done," the senator said.

On other issues, Pryor:

Won a round of applause when he suggested that if there is a "peace dividend" in the form of reduced defense spending, it should be applied first to reducing the national debt rather than starting new programs.

Warned that a capital gains tax supported by President Bush could lead to the sudden "dumping" of farmland, driving down the value of all farmland and leading to the Japanese and the Germans buying major holdings in this country.

Predicted that the next major investment interest of the Japanese in this country will be in communications and could involve the purchase of American newspapers.

Mr. PRYOR. Mr. President, I further ask unanimous consent that a letter dated January 17, addressed to me from professor of law, John R. Pagan of the University of Arkansas School of Law at Little Rock, encompassing his ideas for a voluntary international legal assistance corps be printed in the RECORD.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

UNIVERSITY OF ARKANSAS AT
LITTLE ROCK SCHOOL OF LAW,
Little Rock, AR, January 17, 1990.

Senator DAVID PRYOR,
Federal Building,
Little Rock, AR.

DEAR SENATOR PRYOR: In yesterday's Gazette I read about your proposal to create an Eastern European Peace Corps to assist the countries of Eastern Europe in their transition from dictatorship to democracy.

I applaud your idea, and I hope you will introduce a bill to make the plan a reality. I thought you might be interested in a similar plan which I outlined in December as part of my application for a White House Fellowship.

The fellowship application required me to write a memorandum, of not more than 500 words, to the President, making a specific policy proposal. I was supposed to explain why I think the proposal is important, what issues it raises, and why I think the President should support it.

My proposal asked the President to include an International Legal Assistance Corps in his "Points of Light Initiative," which the President announced on June 22, 1989. The proposed Corp's mission would be to help Eastern European nations democratize their legal institutions. The Corps would be staffed by volunteer American lawyers.

I enclose a copy of my proposal. Please feel free to use any of my ideas if you think they have merit.

Sincerely,

JOHN R. PAGAN,
Professor of Law.

Mr. PRYOR. Mr. President, finally, I ask unanimous consent that Professor Pagan's letter to President Bush relative to the international legal assistance volunteer corps be printed in the RECORD.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

MEMORANDUM

To: President Bush.
From: John Pagan.
Date: December 13, 1989.
Subject: Proposal to Include an International Legal Assistance Corps in the President's Points of Light Initiative.

I. INTRODUCTION

On June 22, 1989, you urged Congress to establish a Points of Light Initiative Foundation to encourage volunteer service by all Americans. I suggest that the Foundation also administer an International Legal Assistance Corps composed of volunteer American lawyers. The proposed Corps' mission will be to help Eastern European nations democratize their legal institutions.

II. REASONS FOR CREATING THE CORPS

1. Eastern Europe needs technical legal assistance:

East Germany, Czechoslovakia, Hungary, Poland, and Bulgaria are undergoing a fundamental restructuring of their systems of government. For forty years, Communist dictatorships monopolized decisionmaking; now the people demand to govern themselves. Self-government requires reforming the machinery of state so decisions are reached fairly, with due process of law. The countries of Eastern Europe have rich cultural heritages, but they are novices at democracy. To infuse due process into their local and national institutions, they need technical assistance from the United States and other nations experienced in operating a democratic system.

2. The United States abounds in the technical expertise Eastern Europe needs:

The United States has less than 5 percent of the world's population but about half of the world's lawyers. We now have approxi-

mately 750,000 lawyers and judges and add another 40,000 annually. From this huge pool of legal talent, the Foundation should be able to attract a few hundred volunteers who gladly will donate their time and skills to help Eastern Europeans implement democracy. The volunteers should not expect Eastern Europeans to become American clones, of course. Different cultures require different institutions. Nevertheless, the volunteers' suggestions, based on the American legal system, will give Europeans a useful model they can adapt to local conditions, if they choose.

3. The Corps will enhance the United States' image abroad:

The Peace Corps has strengthened the United States' image as a proponent of international cooperation and nonviolent change. Creation of the International Legal Assistance Corps will underscore our commitment to those principles.

III. HOW THE CORPS WILL FUNCTION

a. The Foundation will ask Eastern European countries whether they desire technical assistance from American lawyers and, if so, what kind.

b. Then the Foundation will recruit volunteers from law firms willing to subsidize them during their two years of service.

c. Volunteers will receive nine to fourteen weeks of training in language and cross-cultural skills, using Peace Corps methodology, and study the host country's legal system.

d. The Foundation will oversee the volunteers' activities in consultation with the State Department (to ensure consistency with American foreign policy).

e. The program's cost will be financed by the $25 million annual appropriation you requested for the Foundation plus private contributions.

IV. CONCLUSION

Establishment of the International Legal Assistance Corps will reemphasize your Administration's belief in voluntarism and demonstrate support for the democratic movement in Eastern Europe.

Mr. PRYOR. Mr. President, I extend my thanks and gratitude to the Senator from Montana, the manager of this bill.

CLEAN AIR ACT AMENDMENTS OF 1989

The Senate continued with the consideration of the bill.

The PRESIDING OFFICER (Mr. ROBB.) The Chair recognizes the Senator from Michigan [Mr. LEVIN].

Mr. LEVIN. Mr. President, I am environmentalist. I strongly believe that we can, and must, do more to protect our Nation's most precious resource—our air, our water, and our soil—from foul pollutants.

I am for clean air. I am distressed by the air in some of our communities, which is often so dirty that it obscures all but the nearest buildings. I believe we must fight acid rain, which threatens so many of our forests and lakes. I am also worried about the emission of greenhouse gases, which could change the world's climate over the course of the next century.

I am for strong action. It is unacceptable that twenty years after the enactment of the Clean Air Act, 150 million Americans continue to live in areas that fail to meet national standards for clean air. And I do not believe that we can clean up our air without sacrifices.

Air pollution is caused by every powerplant and chemical factory; every automobile; every gas pipeline and petroleum refinery; and every waste treatment, storage or disposal facility in America. Air pollution is caused by every drycleaner, bakery, print shop, and paint manufacturer; every auto body shop, every lawnmower, refrigerator, and barbecue in the country.

At an even more basic level, air pollution is caused by people. Every one of us who drives a car, flies in a plane, turns on the heater or the air-conditioner, buys a new stereo, eats any product that has been shipped by truck or rail, paints a chair, sprays a can of pesticide, takes a shirt to the cleaners, or grills a steak in the backyard causes air pollution.

The reduction of air pollution will require a lot of real sacrifices by a lot of real people. It will require cleaner powerplants, cleaner chemical plants, cleaner cars, cleaner and more efficient manufacturing, cleaner waste facilities, cleaner drycleaners, bakeries, print shops, and paint manufacturers.

Mr. President, it has been said that the costs of not cleaning the air are greater than the costs of cleaning it.

This is true. However, the costs of air pollution do not mean that we should be wasteful in our response to the problem. We simply cannot afford to squander precious resources for relatively small, relatively short term gains and lose the opportunity to invest in new technologies that could give us significant gains in the longer term.

In short, I believe that it is possible to have both clean air and a healthy economy, and that this should be our objective. The bill proposed by the President, the bill marked up by the House subcommittee—the so-called Waxman-Dingell compromise—and many of the elements of the committee bill would make it possible for us to reach both of these goals—cleaner air and a healthy economy.

Each of these bills would give us significantly cleaner air. But, the committee bill contains several provisions that go beyond the administration bill and the House bill, and would impose enormous costs on consumers for relatively small and in some cases negligible pollution reductions.

In the area of automobile emissions, for example, the President's bill, the Waxman-Dingell approach, and the committee bill have many features in common and would yield similar reductions in pollutant emissions relative to those common features.

According to the congressional Office of Technology Assessment, motor vehicles today are responsible for approximately 11 million tons of hydrocarbon emissions. By 2004, these hydrocarbon emissions will decline to 8 million tons with no change at all to current law, simply as a result of phasing in the cleaner cars now made by the automobile industry.

So we are going to go down from 11 million tons to 8 million tons of hydrocarbons by the year 2004 if we do nothing.

The OTA estimates that fuel volatility control and phase I emissions standards—two different measures that are mandated in the President's bill, in the Waxman-Dingell approach, and in the committee bill—will reduce hydrocarbon emissions from motor vehicles further, to less than 4 million tons a year.

All of the approaches that I have mentioned—the administration bill, Waxman-Dingell, and the committee bill—contain those two additional steps and will reduce the level of hydrocarbons from 8 million tons a year down to about 4 million tons a year, or somewhat less. That is a reduction, with those two additional steps, of roughly 35 percent. And the cost of that is about $1.5 billion a year.

However, the committee bill adds so-called "phase II" controls, which are an additional requirement not mandated by the President's bill or by the Waxman-Dingell compromise unless it proves to be technologically and economically feasible. And that is the heart of the Waxman-Dingell compromise, that phase II is only implemented if phase II is technologically and economically feasible.

The Office of Technology Assessment, the OTA—and I emphasize the source of these figures because I think the source of the figures is critical since we are going to hear so many different figures floating around this place in the next few weeks. I emphasize the source of my figures. It is not the automobile industry, and it is not the Lung Association. It is OTA unless I identify a different source, such as the EPA.

The OTA estimates that the phase II standards would reduce hydrocarbon emissions by an additional 160,000 tons. That is less than 2 percent, an additional 2-percent reduction from current motor vehicle emissions.

So, the two steps which the three approaches have in common yield about a 35-percent reduction for $1.5 billion a year. Where the committee goes further is in this phase II reduction, which is another 2 percent additional reduction beyond the 35 percent. And then the question is, what is the cost for that additional 2 percent?

The EPA and the OTA and independent experts have expressed doubts as to whether these additional requirements are even technologically

feasible. If the standards are feasible, in this phase II requirement, the EPA has estimated that they will cost about $6.5 billion a year—that is about $500 a car—for hydrocarbon emissions reductions of about 2 percent.

To summarize, the Waxman-Dingell bill, the administration bill, and the committee bill, all get us about 35-percent hydrocarbon reductions by the year 2004, at a cost of $1.5 billion or about $100 a car. But the committee adds the so-called phase II, which produces less than 2-percent additional reduction at a huge increased cost, of $6.5 billion a year according to EPA, which is about $500 a car.

There is going to be a lot of discussion on this floor as to whether or not that $6.5 billion figure is accurate, for what OTA says is a 2-percent additional reduction. The California Air Resources Board has said it is not going to cost $6.5 billion, it is going to cost $1.5 billion.

I happen to disagree with CARB, because they left out some critical costs, including the costs of technologically changing your catalytic converter so it is able to make greater reductions in hydrocarbons. It is critical either to change or improve the catalytic converter to make it possible, or to change the catalytic converter every 50,000 miles. We have to do one or the other.

But CARB, in its estimate, does not include either, so I disagree with them. But that is not the point. CARB says it is $1.5 billion, for what EPA says is that additional 2 percent reduction. My point here is that all three approaches that I have mentioned, administration, Waxman-Dingell, and the committee bill, because of the volatility gasoline change and the phase I tailpipe, those two together get us a 35-percent reduction in all the versions. So what the question comes down to is whether or not that slight additional gain, that 2 percent additional OTA-identified gain, is worth what EPA says is $6.5 billion and what CARB says is $1.5 billion.

The carbon dioxide emissions standards in this bill are even more extreme. These standards address only one industry, the automobile industry, and would reduce total manmade emissions of greenhouse gases by only 1 percent.

The Department of Energy has estimated that this 1 percent reduction in greenhouse gases would cost an additional $7 to $16 billion a year by the year 2000, depending on the number of cars sold. That is another $750 per car. But, by comparison, the committee approach places no other requirements on any industry that produces carbon dioxide emissions.

Carbon dioxide is emitted by powerplants, steel plants, glass plants, chemical plants, and every other facility that burns fossil fuel. EPA has issued a report that details dozens of ways in which emissions of carbon dioxide can be reduced but the EPA imposes costs on only a single segment of society. This is very different from what it has done in the area of carbon monoxide and hydrocarbons and other areas, where the committee bill looks at all the sources of emissions and tries to apportion in some way what the burdens will be to reduce those emissions.

I do not happen to agree with each and every one of its conclusions in that area but at least that was its effort. I consider that to be a worthwhile, fair, equitable process, even though the results came out different from what I believe are sensible, in a number of areas. At least the process looked at the cause and looked at the cure of an overall problem and says: This industry has to do more in one area; those cities and towns have to do more; these utilities have to do more; and so forth. And then we can argue cost and benefits of each of the solutions.

But, in the area of carbon dioxide, it singled out one industry and only one and said that it must take certain steps. It did not weigh the costs and benefits of a whole bunch of alternatives in this area, as it did in the other key clean air areas, but only on the automobile industry.

So, it is inequitable. It would impose huge costs on consumers and workers for that 1 percent reduction in manmade emissions of greenhouse gases. Most important, it is really inconsistent with the legislative process which in other parts of the bill looks at all the causes and tries to figure out the relative costs of various cures.

Mr. President, the automobile industry must do its share to reduce pollution. Despite the fact that new automobiles today emit 96 percent less hydrocarbons than the uncontrolled level of two decades ago, and despite the dramatic reductions in automobile emissions over the last two decades, the Office of Technology Assessment has estimated that, under existing law, automobiles will contribute about a third of all projected hydrocarbon emissions in 1999.

So nobody suggests we should ignore cost-effective measures to reduce those emissions. They continue to be part of the hydrocarbon problem, and they should be part of the solution. And they continue to be part of the problem, even though—again, a lot of people are not aware of this fact—a new car today has 96 percent less hydrocarbons coming out of its tailpipe than a new car did 20 years ago. So there has been great progress made but there is still a problem.

We should not, Mr. President, in addressing this problem, require wasteful steps which would cost American consumers billions of dollars and seriously weaken a very important industry in this country.

As I have indicated, the auto industry must do its share to reduce pollution but it cannot make up for other segments of society that have made no reductions at all or made less than proportionate reductions.

The committee proposal could impose a cost of almost $30 billion a year, or as much as $2,000 a car, on consumers in this country, between the phase I, phase II tailpipe standards, and the carbon dioxide requirement. The administration bill, the Waxman-Dingell bill, would cost consumers about $200 to $300 a car.

By spending billions of dollars on relatively short-term, incremental improvements in existing technologies as required by the committee bill, we would be wasting resources which could produce the next generation of automotive and clean air technology.

I believe this is a shortsighted policy, a policy of promoting relatively short-term, incremental gains at such a huge cost that we will rob ourselves of resources needed to produce the advanced, ultraclean vehicles we are going to need to make a real dent in the urban ozone pollution problem.

In the long run, clean air and a healthy environment will demand alternatives to current engines. We are going to need "leap-ahead" technologies such as electric vehicles, fuel controls, hydrogen-powered vehicles, vehicles that are partially powered by solar energy, hybrids—leap-ahead technologies that reduce emissions far below that of any current engine. Such technologies are on the horizon and they could be brought to the market earlier rather than later if we will leave some resources to invest in them.

I am afraid, however, that the decision of the committee will squander available financial and engineering resources on these short-term, incremental changes in existing cars, the phase II requirement that we are talking about and, as a result, will make the technological breakthrough to the leap-ahead technologies that I have indicated and others a lot less likely.

That will cost us environmentally, because it is those technologies with which we will be able to achieve major reductions in pollution rather than these relatively small, very expensive, incremental, relatively short-term gains which is typified by the phase II requirement in this bill.

Mr. President, those are some of the problems that I have with the committee approach, and my objections to the bill that has been offered, and as the debate on this bill unfolds I will have more to say in greater detail, with charts, about these problems. But today at least I wanted to summarize some of the issues which I know are going to be raised in this bill.

I am prepared to support a reasonable approach which places a reasonable burden on all of our industries, including the automobile industry. I am prepared to fight for an equitable bill that fairly spreads the burden of reducing emissions across segments of our society that contribute to air pollution. I remain open to that reasonable bill, but there simply are parts of this proposal I cannot accept.

Before I yield the floor, I commend my good friend, Senator BAUCUS. We have some differences on this bill, but we came to the Senate together and I know of nobody I would rather work with, be friends with than my good friend from Montana. I hope that as this debate unfolds we are going to be able to make some progress to achieve something that is mutually acceptable and environmentally sound.

I commend Senator BAUCUS and Senator BURDICK and the other members of the committee. They put in a lot of time on this bill. Even though there are some fundamental disagreements, they have made a real contribution to this debate, and I want to not yield the floor without commending them for that. I yield the floor.

Mr. BAUCUS. Mr. President, I compliment the Senator from Michigan. I know of no more able and more effective Senator who represents his or her State better than the Senator from Michigan. He is a very effective Senator, very articulate, a stalwart defender of the interests of the State of Michigan. I commend him very much for his excellent statement, and I also commend him for the degree to which he has contributed to a solution and also the degree to which he very strongly represents his State's best interests. I thank the Senator.

Mr. LEVIN. Mr. President, we have made some requests for information, and since there is this few-day period which is apparently going to elapse, I would like to make part of the RECORD the requests that we have made. I know there are a number of people trying to fill these requests and a number of agencies but it should be made part of RECORD at this point what the outstanding requests for information and analyses are.

I ask unanimous consent that a memo from myself to Senator MITCHELL be made part of the RECORD.

There being no objection, the memorandum was ordered to be printed in the RECORD, as follows:

MEMORANDUM

To: Senator Mitchell.
From: Senator Levin.
Date: 1/22/90.
Re: Summary of Unanswered or Incompletely Answered Correspondence on Clean Air.

The following summarizes requests for information which have not been answered or have been answered incompletely, regarding the effects of the Senate Environment Committee's Clean Air bill.

To: OTA/CRS/CBO From: 40 Senators.

Request: A cost/benefit analysis of S. 1630 as reported, and estimates of its impact broken down by industry and region.

Reply: The three agencies have indicated a need for more time.

To: DOE/CRS/OTA/EPA.

Request: Information on the carbon dioxide provisions in S. 1630 with respect to efficiency, costs, comparison of other strategies, and consumer preference.

Response: Only CRS has responded to date.

To: Sen. Baucus.

Request: A list of any changes that were made after the Committee adopted S. 1630.

Response: None yet.

To: Sen. Burdick.

Request: A complete analysis of the costs and the benefits of the bill in terms of total reductions of each considered pollutant.

Response: Information has not been provided.

To: OTA.

Request: An analysis of the California Air Resources Board and the Environmental Protection Agency's cost estimates of the second phase tailpipe standards in S. 1630. Also, the costs and reductions expected for carbon monoxide as a result of the Senate Environment Committee bill.

Response: None yet.

Mr. BINGAMAN. Mr. President, yesterday we began consideration of legislation to reauthorize the Clean Air Act. I agree with previous speakers that there are few issues Congress has considered in recent years more important to all Americans than legislation to improve air quality in this country.

Today, I believe as a people we are more aware and better informed of the important environmental challenges that our Nation and the planet face. We are more familiar with terms such as global warming, ozone depletion, acid rain, and carbon monoxide. But with this familiarity comes increased responsibility, responsibility to take the necessary action to reduce threats to our air resources and to begin to clean up the mess that has been made. Today, that process continues on the Senate floor.

I congratulate the majority leader, the chairman of the Environment and Public Works Committee, and Senator BAUCUS, who is the floor manager of this bill, for the excellent effort they have put into bringing clean air legislation to the Senate's attention. I believe action in this area is long overdue.

NEW MEXICO

Clean air is a particularly important issue to the citizens of New Mexico. I am proud of the efforts we have made in my State. We are blessed with clear skies and scenic vistas. We hope to keep it that way. Our utilities and copper smelters have made the expensive capital improvements necessary to reduce harmful SO_2 emissions. Our largest city Albuquerque has embarked on an ambitious course of action to attack both the CO and ozone problems. New Mexicans are willing to make the sacrifice necessary to preserve air quality.

IMPROVING THE BILL

Mr. President, I support clean air legislation. S. 1630 gives us a comprehensive approach to address clean air issues. However, there are provisions of this bill that must be improved. Let me review a few of these areas.

ACID DEPOSITION

I strongly support the provision in title IV of the bill which requires 107 utility plants to reduce their SO_2 emissions by January 1, 1995. In earlier versions of S. 1630, only 20 plants, involving 70 boilers, were covered. If the 20 plant option had been adopted, the resulting emissions requirements would have meant that the 20 plants could only use scrubbers. No other technology would have been able to meet the emissions targets. With 107 plants and a more equitable emissions requirement, the plants—252 boilers—will have the time to investigate alternative technologies, including cofiring, to meet the necessary reductions.

The 107 plant approach is more cost effective for controlling 107 plants at 2.5 lbs/106 Btu, significantly lowers capital cost expenditures, and gives greater flexibility for utilities. For these reasons, I strongly encourage the managers of the bill to resist any effort to lower the number of affected plants. Such action would erode confidence in our sincerity to seek a comprehensive solution to the acid rain problem and be seen as a thinly-yield cost sharing mechanism.

EMISSIONS CAP

I want to work with the managers to find an effective mechanism to deal with the concerns regarding the emissions cap provision of title IV.

This provison will prevent clean burning utilities in the west from expanding their electric generating capacity in order to meet future needs. For that reason, these provisions need to be amended. Plants emitting less than 1.2 lbs./MMBtu of emissions will be limited to their 1985 emissions rate and 120 percent of their baseline. The proposed tonnage cap results in the imposition of unreasonably harsh and unnecessarily expensive burdens being imposed on the owners of plants which already have taken major steps, whether through the installation of expensive pollution control technologies or the purchase of low-sulfur coal, to reduce their emissions. Additionally, new powerplants must hold allowances equal to the units annual SO_2 emissions. New utility units are not eligible for allocation of allowances. This prohibition could prohibit the construction of new powerplants in many growth areas, especially in the West. Because of low emissions in the Western areas of the United States, generation of allowances for new source offsets may not be possi-

ble. The only alternative may be to purchase the allowances from the high-sulfur areas of the Midwest. This will, in effect, serve as a subsidy to the midwestern utilities that have not shown the same commitment to clean air as have western utilities that have invested enormous capital toward clearing up their operations.

I remain firmly opposed to any cost sharing in this legislation and I hope the managers of bill will take action to correct this problem consistent with the committee report. I do not think it was the intent of the sponsors to prevent future electric generation capacity. I am hopeful we are able to allay the fears of those in the West who strongly support clean air and have demonstrated that commitment over the past decade.

ALTERNATIVE FUELS

I support a strong alternative fuels initiative as part of this legislation.

Urban air quality, whether acid rain, smog, or ozone, is a major and very troubling issue on our national agenda. Vehicle pollution is the major culprit, contributing to and accounting for 40 percent of the Nation's smog.

In the United States, there are about 13 million fleet vehicles—schoolbuses, taxis, trucks, delivery vans. They run throughout the day, have low fuel economy and mostly operate in the cities, where air pollution is worst. Using alternative fuels such as natural gas and oxygenates such as ethanol in these fleets will have the best immediate benefit for the country.

In the coming years, there will be an increasing number of vehicles running on alternatives fuels. In order to stimulate the use of alternative fuels, I introduced legislation last session to require the conversion of the Federal fleet of vehicles to these fuels. The U.S. Government has a responsibility to take a leadership role in the effort to reduce carbon monoxide emissions through the use of cleaner burning fuels. I encourage the managers of the bill to include my Federal fleet requirements in whatever committee amendment may be offered.

Additionally, I strongly support the committee's effort to include a strong oxygenated fuels requirement in title II of the bill related to motor vehicles. Albuquerque, NM, faced EPA sanctions in 1987 and 1988 as a result of noncompliance with CO emissions levels. Albuquerque has imposed a mandatory oxygenated fuels program and a vehicle inspection program which have helped reduce those CO levels to acceptable levels.

ADDITIONAL CONCERNS

I also plan to offer an amendment during consideration of this bill to effectively address worries I have regarding air pollution in the southwestern part of New Mexico. Particulate matter has formed a visible haze over much of the Rio Grande Valley and surrounding areas. I am concerned that part of this visibility problem is due to SO_2 emissions from the Nacozari and Cananea copper smelters in Sonora, Mexico. Both facilities are monitored by the Mexican Government which, under an agreement with the United States, has voluntarily agreed to operate the smelters in such a manner as to meet the same emissions requirements that all United States smelters are required to meet.

I understand the Mexican Government has certified that the facilities are currently meeting the emission requirements. However, I believe the amount of particulate in the air raises serious doubts about the methods used in certifying compliance with the treaty. I do realize that periodically the smelters are allowed bypass emissions—when emissions can exceed normal levels for a limited period of time. These bypass emissions or other emissions not monitored by the Mexican Government may be adding to an already serious CO and ozone problem that exists in the El Paso-Juarez area.

I intend to offer an amendment which would instruct our negotiators to review these concerns with the Mexican authorities at the next official negotiating session and see if there is some way to lessen the severity of these bypass emissions. I also will ask EPA to monitor the particulate matter on the U.S. side of the border and see if there are any additional steps that can be taken to address the problem. I am concerned not only from the perspective of visibility, which is very important to our quality of life in New Mexico, but also because of the potential health effects of such pollution.

CONCLUSION

In summary, the sponsors of S. 1630 deserve our thanks for their efforts in crafting the bill that is before us to protect and improve our air quality. I look forward to working with them during consideration of the legislation and in helping them make the necessary adjustments to win broad support for the bill. I urge my colleagues to assist in this effort.

Thank you, Mr. President.

Mr. ADAMS addressed the Chair.

The PRESIDING OFFICER. The Senator from Washington is recognized.

Mr. ADAMS. Mr. President, I am pleased that once again we are working toward significant revisions of the Clean Air Act. As a cosponsor of the bill during the last session and Senate bill 1630 this session, I would like to take a minute to commend all the Senators and the staff people who have spent a tremendous amount of time working on this issue. I would also like to give a personal note of thanks to Senator MITCHELL for his consistent leadership on addressing this urgent issue. This is a problem we must all face together. I must admit, however, that I am saddened about how little progress we have made over the years. We fought the same fights and debated the same issues over 10 years ago when I was the Secretary of Transportation. I hope that we meet with success this time.

I am very pleased that the Clean Air Act is the first issue on our agenda. Its place on our schedule reflects the public concern with this growing problem. In my home State of Washington we know that the quality of our environment is one of the most important issues confronting us, our children, and our grandchildren.

As citizens of Washington State, we are fortunate to be surrounded by beautiful mountains, lakes, and trees. These features are treasured for their aesthetic and ecological values by both residents and visitors. Our State's economy also depends upon a healthy environment. One of our largest industries is agriculture which requires a clean environment. Many people do not realize how enormous an impact a clean environment has on the agriculture of each State in the United States.

Our quality of life, our economy, and even the survival of our State is under constant threat by pollutants from a variety of sources. Air pollution from automobiles is escalating at a tremendous rate. The capital of the "Inland Empire," Spokane, situated in the beautiful, open blue skies of sunny eastern Washington, suffers from temperature inversions that trap pollutants at the ground level and often cast an ugly brown pall over that fair city. The population surrounding my hometown of Seattle, which is constantly being described, and I think truthfully so, as "one of the most livable cities in the United States," has grown over 20 percent during the past decade. This increase in population, combined with the changing work patterns, has resulted in a huge increase in automobile miles traveled, and therefore in automobile pollutants fouling our air. Statewide, we have experienced a 73-percent increase in vehicle traffic over the last 10 years alone. As a result, many areas in our State are not in compliance with the current clean air standards.

Probably the most dramatic example is illustrated in our national parks. Olympic National Park in the northwestern corner of our State has been listed as one of the four places in the world with the purest air. It is quite a formidable honor that we share with Antarctica, the Caucasus Mountains, and the 17,000-foot level of the Andes Mountains. We have a lot to protect. This is an unusual and valuable resource for all Americans, not just the people of my State.

Incredibly, this pristine park is also under siege by pollution, pollution we have created as human beings. Early reports indicate a decline in numbers of certain plant communities in the park that are sensitive to air pollution. Further research in monitoring of the air should tell us the extent of the problem. Mr. President, it would be a terrible tragedy to lose this unique natural resource.

There is no doubt we have a tremendous amount of work to do to fix the environmental problems we have created. We have created them, Mr. President, and we are responsible for their repair. We need to ensure that our actions in the future, do not add to that burden and leave an even bigger problem for our children and our grandchildren. A strong clean air bill may not win the war, but it is certainly a weapon we need to fight the battle.

A lot of attention has been focused on the cost to industry of implementing this act. No doubt, a price must be paid for environmental protection, but there are more important questions for us to consider: What are the costs of not cleaning up the environment? How much more will we pay in health care costs, lost productivity, and quality of life degradation without a strong Clean Air Act? Who is going to pay this price: today's sources of pollution, or unborn generations? Mr. President, I believe that we have a responsibility to the Earth and to our children to reduce the pollution of our atmosphere and pay the costs. Many of my constituents agree and have written to tell me that they are willing to pay their fair share, whether it means an increase in the cost of a car, electricity, or taxes. I know that the President has recently visited Eastern Europe. I have, too, and was appalled, as I viewed the damage that has been done in the Soviet Union and in Eastern Europe by uncontrolled development at the expense of the environment. Huge areas have been devastated. People are ill because of the pollution. It will take a great many years and a huge amount of money to repair this problem.

We have done better in our Nation. We have tried hard, and I think our people are dedicated to the clean air goal. But this is an important reminder to all of us that we must take another step forward to assure that our air is clean, not just for some theoretical reason, but for the health of our people, the quality of our life, and the future of our planet.

I wish to conclude, Mr. President, with the words of a very wise man spoken more than 100 years ago. The man was Indian Chief Sealth, the man after whom our largest city in Washington State was named. Chief Sealth said, and I quote:

The Earth does not belong to man. Man belongs to the Earth. This we know. All things are connected like the blood which unites one family. All things are connected. Whatever befalls the Earth befalls the sons of Earth. Man did not weave the web of life. He is merely a strand in it. Whatever he does to the web, he does to himself.

Mr. President, the web he speaks of is very tenuous. This is our legacy for future generations.

Mr. President, I appreciate the opportunity to convey my thoughts regarding this issue, and I look forward to passing revisions to the Clean Air Act this year. I know this will be a long, difficult, and complex bill, but I want the managers to know and the people of the United States to know that many of us are here to do everything we can to assure that the environment and the air we breathe are protected, not only for ourselves, but for our children and for our grandchildren.

Thank you, Mr. President. That concludes my statement.

I suggest the absence of a quorum.

The PRESIDING OFFICER. The absence of a quorum having been noted, the clerk will call the roll.

The bill clerk proceeded to call the roll.

Mr. DOLE. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

The PRESIDING OFFICER. The Republican leader is recognized.

Mr. DOLE. I thank the Chair.

(The remarks of Mr. DOLE pertaining to the introduction of S. 2021 are located in today's RECORD under "Statements on Introduced Bills and Joint Resolutions.")

Mr. DOLE. Mr. President, I thank the distinguished manager for letting me intervene.

Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The bill clerk proceeded to call the roll.

Mr. COHEN. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. COHEN. Mr. President, I am very pleased to support the Clean Air Act Amendments of 1989, and look forward to an illuminating debate in the Senate over the next few weeks. This is a very momentous occasion—the first time the Senate has taken up consideration of changes to the Clean Air Act in over a decade. I hope that the final bill approved by Congress and the President will be momentous as well, bringing much-needed improvements to our Nation's air quality. We need to provide ourselves with better ammunition to deal with the presistent problem of smog, the hazards of toxic air emissions, threats to our global atmosphere, and, most important to the residents of Maine, the destruction caused by acid rain.

The evidence is clear and convincing: Acid rain is caused by sulfur dioxide and nitrous oxide emitted from power plants and carried by prevailing winds to areas like Maine, far from the original source. The acidity carried in rain, fog and snow settles on lakes, rivers, crops and forests, changing nature's balance. In addition, the pollution in acid rain magnifies the problems of those who suffer from respiratory diseases.

The legislation before the Senate today would reduce the level of sulfur dioxide emissions by 10 million tons by the year 2000, put a cap on those emissions so that a future increase in pollution emissions is prevented, and allow utilities and industries to trade pollution allowances so that growth can occur without further environmental degradation. In addition, the bill would require the reduction of nitrous oxides by over 2 million tons, a level necessary to achieve if we are to reduce the impact of acid on our lakes, rivers, and forests.

I wish to remind the Senate of an invitation extended to this Congress almost 2 years ago. The Prime Minister of Canada, Brian Mulroney, said of his government and people, "We invite the administration, and the leadership of Congress, to conclude an accord whereby we agree on a schedule and targets for reducing acid rain that crosses our border." Our response to this invitation is long overdue and should be forthcoming. Mr. Mulroney maintains that by the time his country's acid rain control programs reach their projected targets the poisonous rain exported to the United States will be reduced by more than 50 percent. He also states that they can ask for nothing more than this from us. In fact, we can ask nothing less than this from ourselves.

After all, the devastating effects of acid rain are found not only in Canada, but are increasingly apparent in our landscape and wildlife. The United States has approximately 1,100 acidified lakes, in which fish no longer thrive on the water, but choke on its poisons instead. Likewise, 3,300 streams are still flowing but dying as they carry in their current the pollutants we produce.

As long ago as 1967, Swedish soil scientist Svante Oden described acid rain as a chemical war warranting immediate attention in Europe. Despite this warning, we have continued to poison the environment which struggles to nourish life. Now, we must ally ourselves with nature in an effort to undo the damage done and prevent further destruction. Today, as we engage in prolonged debate over the means to combat this menace, the war contin-

ues, with scientists often referring to acid rain as one of the worst environmental time bombs.

We do have the means to control acid rain, thereby defusing the bomb. We do not, however, have the means to stop the progression of time, which at present is witness to the growth of the problem, rather than a part of its solution. It was in 1980 that I first rose in support of acid rain legislation, and today I rise again because we have not yet taken responsibility for reversing the degradation of our Nation's resources and environment. It is essential to our well-being that the 101st Congress take measures to ensure an end to the devastating effects of acid rain.

Research indicates that the problems are grave and require immediate action. For example, studies of streams in the Eastern United States conducted by the EPA found that contamination of streams by acid rain is greater than originally thought. Also, according to a study made public in April 1988, acid rain contributes greatly to the decline of marine life in Atlantic coastal waters. Furthermore, while in the past there has been doubt about the effects of acid rain on forests, there is now strong evidence that acid rain has a grave impact. A 1988 report by the Massachusetts Department of Environmental Management documented the death of an unusually high number of red spruces, as well as the weakening of several sugar maples. These observations are largely attributed by State forestry experts to acid rain and airborne pollutants. It is frustrating to think that we allow the death toll in this chemical war to rise through inaction.

In the meantime, there have been those who have fought diligently, such as in Canada, to save their environment, only to reach the conclusion that the cooperation of several parties is needed to successfully combat transboundary pollution. Recently, Maine was vividly reminded of the effects of acid rain when 16 of 50 high-elevation lakes were found to have acidified. In addition, Maine's rain and snow in December 1988 was declared by the National Audubon Society to be 10 times more acidic than normal precipitation. Maine has initiated efforts to rid itself of such pollution, but the results have been limited by inaction on the part of other States and Congress. For example, State-approved clean air legislation reduced the 1980 figure of 106,000 tons of sulfur dioxide, the key component of acid rain, to approximately 90,000 tons. Yet, because 80 percent of the acid rain falling on Maine originates in other States, Maine has exhausted its means to protect itself.

Each year many people retreat to the State of Maine, also known as Vacationland, to be refreshed by its beautiful lakes, spectacular coastline, expansive forests, and abundance of fish and wildlife. The natural resources responsible for our tourism industry contribute to the livelihood and well-being of many Maine residents. If acid rain continues to fall on Maine, our fishing, forestry, and agricultural industries will certainly suffer, as will the residents of Maine and its future visitors. My concern deepens as I think of the increasing magnitude of the problem we face.

In the past, in dealing with the issue of acid rain, two major questions have been asked: "Who will pay?" and "What kind of regulations should be used?" Perhaps when addressing the issue of acid rain this year, we should ask ourselves the following questions: "Who will pay if nothing is done?" and "What kind of world will we live in if no regulations are agreed upon?" The answers to these questions are obvious, but it is my hope that in addressing them Congress will recognize the need for immediate action. Otherwise, we will all pay the price for inaction. At the very least, we will be sacrificing the joy of relaxing in an environment abundant with life, and at the very worst, we will be forfeiting our children's future.

The need to control the problem of smog is equally compelling. This form of pollution has crept stealthily along the eastern seaboard until it has reached the pristine islands of the Maine coast. The fact that Acadia National Park on Mount Desert Island, and another section of the Park on Isle au Haut are ozone nonattainment areas is reason enough to take strong actions to restrict the pollutants that form smog. Hancock County, ME, the rural county where Acadia National Park is located, has been an ozone nonattainment area for several years. During the summer of 1988, Acadia posted its first health warning because of severe smog levels. I believe it is disgraceful that a national park far from any urban center should be put in this position, but it is a reality we must confront. The fact that Isle au Haut is a nonattainment area would be laughable if it were not so serious a problem. This is an island several miles off the Maine coast that can only be reached by mail boat. There are no traffic jams, no highways, no polluting industries, but there is a smog problem. This situation demonstrates clearly that the problem of smog must be dealt with nationally. It cannot lie in the hands of any one State of region, no matter how responsible.

I hope my colleagues will agree that no price is too great or restriction too tough, which enables us to preserve our environment, its benefits, and the simple joys we derive from it. I am pleased to cosponsor legislation which has as its goal the protection of the environment and urge my colleagues to act quickly so that this goal might be achieved.

Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The legislative clerk proceeded to call the roll.

Mr. BAUCUS. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. BAUCUS. Mr. President, at this time I would like to spend more time describing in greater detail the provisions of S. 1630, particularly with respect to title IV, the acid rain provisions.

TITLE IV

Title IV of the bill, which adds a new title IV to the Clean Air Act, will result in a reduction of 10 million tons of sulfur dioxide below 1980 levels and the reduction of 2.7 million tons of oxides of nitrogen. All of the reductions mandated will come from utility powerplants.

The acid rain program works in two phases. In phase I, which begins January 1, 1995, 107 of the highest emitters of SO_2 or sulfur dioxide must make moderate reductions. They must bring their SO_2 emissions down to a level that would be equal to a 2.5-pound SO_2 emissions rate. In the year 2000, all utility plants whose emissions rates are in excess of 1.2 pounds of SO_2 must bring their emissions down to the equivalent of that 1.2-pound level. If a plant is already emitting SO_2 rate that is under 1.2, that plant will actually be permitted to increase its emissions by approximately 20 percent.

Once this program is put in place, utility plants will be permitted to emit no more than a total of 8.9 million tons of SO_2 per year. For the acid rain program to achieve its goals, emissions must not exceed that level. Accordingly, as we move forward in the consideration of the acid rain provisions, we must commit ourselves to the principle of emissions neutrality in the same way that we observe the principle of revenue neutrality when dealing with the budget. Any alterations we propose to make to this program must not result in increased emissions. To ensure that we maintain this ceiling on total SO_2 emissions, the bill requires that any new powerplant must secure SO_2 reductions elsewhere to offset its own SO_2 emissions.

In reporting S. 1630, the Environment and Public Works Committee looked closely at the provisions of the President's acid rain proposal and embraced an innovation introduced in the Bush bill. The acid rain program established under S. 1630 includes a system of marketable allowances that will permit utilities to trade emissions reduction obligations so that they can

achieve the maximum reductions for the lowest cost. In fact, the EPA reports that this system could reduce the overall cost of the acid rain program by 20 percent. It could also help reduce costs for all regions of the country. Those facing the highest costs because they have the greatest reduction obligations are in the best position to make extra emissions reductions cost effectively. They could lower their net costs by selling those extra reductions to growth regions that sought to emit more than they would otherwise be permitted to. Both sides of the transaction would be saving money.

Let me take a few minutes to explain how the marketable allowance system will work. When the program goes into effect any unit that has an emissions tonnage limitation requirement will be allocated allowances equal in number to the number of tons it is legally permitted to emit each year. Utilities are permitted to transfer allowances between and among units across State lines and even between different utility companies. At the end of each year, each unit must hold allowances equal in number to the emissions it has produced.

In practice, any unit that reduces its emissions more than required will be required to surrender to the EPA fewer allowances than will have been allocated to it initially. The leftover allowances can be sold to another unit that may need to produce more emissions than initially permitted. Or, the leftover allowances can simply be saved for use in future years.

The allowance system adds a new financial weapon to our arsenal for combating pollution. Since selling allowances is the same as making money by making extra emissions reductions, allowances will create economic incentives for innovative technologies and strategies for reducing emissions.

At the same time, utilities will use the allowance system to find the least expensive ways of complying with their emissions requirements. According to EPA analysis, the allowance system can produce a 50-percent cost-savings for phase I, a 14-percent cost-savings in the year 2000, when phase II begins, and a 20-percent cost-savings in 2010.

The allowance system also provides the key to the regional equity established under the acid rain program. In simple terms, all regions of the country can pool their efforts through allowance trading to ensure cost reductions for each region of the country. On the one hand, plants that have to make large reductions enjoy economies of scale so that their per-ton reduction costs can be relatively low even when they make more reductions than required. On the other hand, plants in regions facing growth in energy demand and plants with smaller reduction obligations may face higher per-ton costs. This presents utilities with the perfect opportunity to reduce their costs. The higher-emitting plants will be able to make more reductions than required and will be able to do so cost-effectively. They could then sell their resulting unused allowances to plants whose on-site reductions would be more expensive. As a result of such sales, both buyers and sellers can reduce their costs.

In fact, according to the EPA, for utilities in the region comprising Iowa, Missouri, Illinois, Indiana and Ohio, allowance trading can yield a 58-percent cost saving in 1995 and savings of 10 to 16 percent between 2000 and 2010. In the same vein, utilities in West Virginia, Virginia, Kentucky, Tennessee, and the Carolinas can use allowance trading to cut costs by 8 to 34 percent during the first 15 years of the program. Units in States like Florida facing dramatic growth in energy demand in the 80 to 86 percent range between 1985 and 2010 could use the allowance system to reduce compliance costs by 11.5 percent in 2000 and 27 percent in 2010. In the same vein, utilities in North and South Carolina, facing aggregate demand growth ranging from 66 to 74 percent could reduce costs through allowance trading by 18 percent in 2000 and 9 percent in 2010.

Both the bill sent up by President Bush and S. 1630 impose a firm cap on utility SO_2 emissions beginning in the year 2000. Without such a cap—which simply requires that new units ensure that SO_2 reductions are made elsewhere to offset the emissions produced by the new units—the objectives of the acid rain program would slip away less than 10 years after they had been achieved. The EPA estimate that between 1985 and 2010 new utility units will add between 800,000 and 2.7 million additional SO_2 emissions a year—and this calculation takes full account of the fact that every new unit will by itself have very low emissions. Without this cap, we simply would not be fulfilling our promise to the American people to enact legislation that ends, once and for all, our national acid rain crisis.

Though few would disagree that common sense demands we fix a permanent limit on SO_2 emissions if we are to solve the acid rain problem, some will argue putting a limit on SO_2 emissions is just the same as putting a limit on economic growth. Now, we are always seeking reliable predictors of economic growth, but SO_2 emissions inventories are not among them. In fact, history demonstrates that there is simply no connection between SO_2 emissions and economic growth. Between 1970 and 1987 the U.S. economy grew substantially, but SO_2 emissions decreased by 28 percent.

In practical terms, utilities and independent power producers will have a wide range of feasible options for responding to the cap or new-unit offset requirement. First, new units will be able to minimize the amount of offsets they have to secure by operating at extremely low emissions levels. To achieve this, near-term energy needs can be met by a mix of low-emitting technologies that include gas turbines and gas-fired combined cycles. Over the longer term, coal-fired plants will be able to reduce their offset burden simply by increasing the efficacy of their emissions control technology. The EPA estimates that just by increasing emissions removal by 5 percent, new units will be able to lower their additional annual emissions from the 800,000 to 2.7 million ton range to the 300,000 to 800,000 ton range.

(Mr. SHELBY assumed the chair.)

Mr. BAUCUS. Thus, total annual offsets needed after 2000 will be between 300,000 and 800,000 tons. According to the EPA, the reservoir supplying these offsets will be more than ample. For example, expanded application of energy conservation could produce approximately 500,000 tons of offsets. In addition, the EPA estimates that industrial sources of SO_2 could make voluntary, cost-effective reductions totalling 800,000 tons per year, which new units could underwrite and take credit for. Finally, EPA estimates that repowering existing units—which often entails lowering emissions while increasing energy production capacity—could produce yet an additional 600,000 tons of offsets.

In all, the cost of adopting measures such as these to meet the new unit cap will add only 4 or 5 percent to the total cost of a new powerplant.

Throughout the program, older, higher emitting powerplants will retire and will be replaced by units that can match their predecessors generating capacity while producing only one-third or even one quarter of their SO_2 emissions. Eventually, the total number of utility SO_2 emissions will begin to decline and allowances available to new units will increase even further. Under one EPA scenario this may begin to occur as early as 2010.

In view of the economic incentives built into the acid rain program, the total number of offsets needed by new units to meet the cap may actually be a good deal smaller than 300,000 to 800,000 and the cost achieving reductions or obtaining allowances may be a good deal lower, too. Because of the offset requirement, new units will have powerful economic incentives to employ emissions control technologies or methods that minimize their emissions and their resulting need to obtain allowances. These incentives will lead to innovations that can maximize emissions control while minimizing costs. If successful, such innovations, which have not been factored

into the EPA's analysis of the new unit cap requirement, will help lower the price of allowances themselves.

Opponents of acid rain legislation have been quick to dismiss the possibility that the allowance market will work to lower costs or to generate offsets sufficient to allow new units to meet the cap requirement. Many contend that utilities receiving allowances will simply hoard them either to meet their own cap requirements or to stifle competition. To provide insurance against such a breakdown, S. 1630 authorizes the EPA to create a special Federal allowance pool so that new units can resort to those allowances if they cannot secure any from other sources.

But this is an insurance policy that is probably not needed. Given that utilities can achieve significant cost savings by participating in a vigorous allowance market, both their shareholders and their regulators will have ample incentive to see to it that utilities use the market to lower their overall compliance costs. Earlier this month the Public Utility Commission of Ohio adopted a resolution pledging that the Ohio PUC would encourage interstate allowance trading by Ohio utilities precisely to maximize cost savings.

Utilities that hoard their allowances on the assumption that they will be more valuable in the indefinite future will risk squandering a significant asset. In fact, the value of allowances will probably peak, possibly as early as 2010 if, as one EPA scenario predicts, total SO_2 emissions begin to decline. Also, as the price of allowances rises, utilities will have increasing incentives to find innovative ways to make greater amounts of reductions more cheaply. Eventually this effort will succeed, and, as cheaper reduction methods become available, the price of allowances will begin to fall. In short, utilities holding allowances will be under stiff economic pressure to use the market to cash in on the value of their allowances before prices peak and drop.

Traditional opponents of S. 1630 may also attack the bill for requiring utilities to meet total tonnage limits rather than simple emissions rates and may also argue that the cap should be replaced by giving the EPA authority to ratchet down on emissions rates to offset emissions increases from new units.

Simply setting an emissions rate does not guarantee that we would be able to achieve and hold a 10 million reduction. A rate is just a function of emissions over electricity output. If power generation increased, so would emissions even if the emissions rate remained the same.

Calling on the EPA to ratchet down utility emissions rates every few years would put the Agency under enormous, if not unbearable, political pressure—an ironic assignment of responsibility since it would occur only if we in Congress had shirked our own.

At the same time, if the EPA did in fact require a succession of lowered emissions rates to compensate for new unit emissions increases, then utilities would be facing repeated and costly economic disruptions for the simple reason that utilities emissions obligations would change every few years.

In contrast, S. 1630 allows utilities to undertake flexible long-term planning and carry out those plans in a stable regulatory environment.

In addition, an emissions trading program would be extremely difficult to implement under an emissions rate approach and the flexibility and savings of emissions trading would be impaired or lost.

Finally, an emission rate program would eliminate one of the most powerful methods of pollution control, energy efficiency, as an option for compliance. Again, since a rate is merely a function of output, electricity generation could be reduced without lowering a utility's emissions rate.

In short, an acid rain program that simply imposed emissions rates would lack both environmental and economic integrity.

BENEFITS OF AN ACID RAIN PROGRAM

The broad scope of benefits that will accrue from the sulfur and nitrogen reductions mandated under the acid rain provisions of the bill must not be underestimated. Much more is at stake than making reparations for a few dead fish as the opponents of this legislation might wish us to believe. On the contrary, to appreciate the full range of benefits the acid rain provisions of the bill would bring we must look at the whole vista of natural resource and human health and welfare issues involved.

One hundred and fifty million Americans live in the 31 States east of the Mississippi and virtually every one will reap the benefits of reducing by 40 percent the more than 20 million tons of sulfur dioxide we put into the atmosphere every year. At the same time, the West, celebrated for its pristine natural resources will enjoy similar benefits.

Perhaps the most well-known victims of sulfur dioxide and nitrogen oxides, the second pollutant controlled by this bill, are the forests, lakes and streams of New England, the Mid-Atlantic, the Southeast, and the Rocky Mountain high country. When we achieve the mandated reductions, however, it could well be that human health is the greatest beneficiary.

Study after study, including separate investigations by epidemiologists at Brookhaven National Laboratories, Carnegie-Mellon University, and Harvard, reveal higher health risks in those regions that have higher sulfur dioxide emissions.

According to the EPA, these studies indicate that the sulfur dioxide reductions called for in the bill could prevent between 20,000 and 50,000 premature deaths every year.

In addition, sulfur dioxide often creates acid aerosols which cause lung damage when inhaled. Because of this, the agency's Clean Air Scientific Advisory Committee has already called for a standard specifically to control acid aerosols, which, the advisory committee has found, has risen to dangerous levels in the atmosphere. Studies indicate a strong link between the acid aerosols and the risk of illness. If we reduce sulfur dioxide we will be reducing that risk.

Once upon a time, a visitor to the Shenandoah National Park in nearby Virginia could see far enough to get a clear view of the Washington monument hundreds of miles away. That day has long gone. Such views are impossible even on the clearest days. Since 1940, visibility in the eastern United States has declined by 40 percent. Again, since 1940, in the last 50 years, visibility in the Eastern United States has declined by 40 percent. Studies have established a nearly exact correlation with the level of sulfates in the air, which, in turn, are the direct product of sulfur dioxide emissions.

Finally, when we think about the damage to lakes and forests caused by acid rain, we have to remember that acid deposition can undermine entire ecosystems. Entire food chains can fail with the destruction of just a few aquatic species in a given system. For example, the EPA reports strong evidence that falling waterfowl populations may result from the acidification of lakes.

Acid deposition has the potential to release toxic metals from soils and can, in as little time as one generation, leach essential nutrients from soils that have taken thousands of years to develop.

Title IV of this bill will put in place a program to curtail acid deposition and protect our environment.

Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The assistant legislative clerk proceeded to call the roll.

Mr. SPECTER. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. SPECTER. Mr. President, I ask unanimous consent to proceed for 5 minutes as in morning business.

The PRESIDING OFFICER. Is there objection? Hearing none, it is so ordered.

THE ELIMINATION OF EARMARKING

Mr. SPECTER. Mr. President, I would like to make just a few remarks about a subject which has been raised on the floor earlier today and is undergoing a considerable amount of public debate; that is, the proposition of discontinuing the practice of earmarking U.S. foreign aid, and that five countries had been specified among those where the earmarking should be eliminated.

I had the opportunity to travel to three of those countries in the distinguished company of Senator RICHARD SHELBY of Alabama, who happens to be the Presiding Officer today. During our trip we had discussions with the leaders of Pakistan, Egypt, and Israel, three of the countries designated to have the earmarking curtailed.

It was my view that those countries would be very adversely affected by any reduction in foreign aid which is being advanced at the present time. I happened to be in Israel at the time the announcement was made as to the distinguished Republican leader's statement, which appeared on the oped page of the New York Times, and I can say that there was considerable consternation there as to what impact there would be on Israel.

I had come from Egypt the day before and had a discussion with Egyptian officials, including President Mubarak. There was concern over Egypt's financial situation, and on that day Foreign Minister Meguid and others had left Cairo to go to the United States to deal with the IMF, International Monetary Fund, because of Egypt's precarious position.

I am sure that when President Mubarak and others read the notice of the proposal to cut their assistance, there was enormous concern. Similarly, in Pakistan, as you know, Mr. President, because you and I were present and talked to the President of Pakistan, Benazir Bhutto, about the enormous difficulties confronting Pakistan. In Pakistan there has been a special alliance with the United States on the very, very difficult issues in Afghanistan.

Mr. President, I think that ultimately we have to take a very hard look at the reduction in foreign aid from something in excess of 20 billion in 1985 to something in the neighborhood of $16 billion in fiscal year 1990. Those statistics were cited yesterday by Senator KASTEN, who is the ranking Member of the Foreign Operations Subcommittee. Since I serve on that subcommittee, I know personally the very grave problems which we face in allocating funds and dealing with this problem of earmarking.

We are looking for some funding, possibly, as a reduction in our defense needs. That has been articulated by the President and the Secretary of Defense. Where there is a necessity for assistance in Eastern Europe, we may be able to find funds in that direction. When we talk about the needs in Bolivia and Latin American countries on the drug issue, we have appropriated substantial funds, some $8.9 billion, or there may be some funds available as a reduction of defense needs.

Certainly, it is a very difficult issue. I caution my colleagues that the issue being raised may spread considerable alarm among our allies. I suggest that these delicate matters be handled preliminarily with discussions with our allies.

In Israel—as I said, I was there when the news broke—they face enormous additional costs as a result of the immigration of Soviet Jews. We know that there has been a sharp limitation in our own immigration policies, so that Soviet Jews are not able to come to the United States, which most would prefer. But instead, they are being taken by the State of Israel, and Israel is doing a favor to many, to the world really, but certainly to the United States, where there is considerable sentiment about having Soviet Jews come to this country. That is a subject which was debated very extensively last year in the immigration bill.

I know my time is growing to a close, and I thank my distinguished colleague from Vermont for yielding, because he was about to speak. I think this is a very, very sensitive issue, and the other two countries on the list, the Philippines and Turkey, are both good friends. All are good friends.

We have to do a great deal, but in the context where there is some difference with policies, as there might be with Turkey on the Armenian issue, the resolution pending in this body, or where there is debate as to whether we are trying to pressure Israel or propose a cut in foreign aid that may signify to some that it is a form of punishment, we have to proceed with great care.

I suggest, Mr. President, as we look at Eastern Europe and the chances for democracy and economic development, and look at Latin America with the need for curtailing drugs, and look at long-standing allies like Pakistan, Israel, and Egypt, we ought not to be curtailing aid and ought not send them signals which would suggest to any extent that we are fair-weather friends.

I thank the Chair and yield the floor.

CLEAN AIR ACT AMENDMENTS OF 1989

The Senate continued with the consideration of the bill.

Mr. JEFFORDS. Mr. President, I wish to address the pending business, the clean air bill.

This is a day that I have looked forward to for some length of time. I have been either in the House of Representatives or the Senate for 15 years. During that period of time, little or nothing has been done to improve the Clean Air Act. The only significant event occurred 10 years ago, in 1980, when we were finally able to get a study of the problem of acid rain.

So finally the log jam has been broken and finally clean air legislation is ready to be addressed by this Congress. I rise in strong support of S. 1630, and I wish to commend the chairman of the committee, Senator BURDICK, for his leadership, and Senator BAUCUS and Senator CHAFEE, who have shown tremendous leadership, compassion, heart, stamina in moving the bill through the subcommittee and committee process.

Equally important, I commend the efforts of President Bush for making the issue of clean air a priority of his agenda. That has helped us immensely.

It has been said that people love to talk about the weather, but no one ever does anything about it. Today we are doing something about it. Today we begin in earnest the job of restoring our weather to its healthy and natural condition. Today we are poised to act to curb acid rain; to decrease urban smog; to reduce toxic air pollution; to slow the rate of global warming; to repair our stratospheric ozone shield.

I do not believe that we will see many Senators coming to the floor to argue against clean air. Rather, our disagreements will be over various provisions of the proposed action. As a member of the Environment Committee, which had developed the bill before us today, I want to make it clear that I will oppose efforts to weaken provisions of the Clean Air Act amendments.

In particular, I strongly support the acid rain provisions, including the cap on sulfur dioxide emissions after the year 2000. I support the title of the bill regulating CFC's and other ozone depleting chemicals. I support the automobile provisions, including the second round of tailpipe emission standards, the carbon dioxide emission limitation and provisions regarding evaporative emissions. In addition to the motor vehicle requirements, I intend to offer an amendment designed to improve the quality of gasoline that is sold at service stations.

My home State of Vermont, due to its particular geographical location, was one of the first States to feel the full impact of acid rain. Nearly two decades ago, we first began to notice that trees were dying and that lakes and streams were becoming void of aquatic life. Due to the inability of Congress and the unwillingness of

Federal regulators to act, the problem has only worsened. Over the past two decades, growth in electrical generation, and proliferation of tall stacks, have increased the amount of acidic precipitation in Vermont.

It remains a physical truth that what goes up must come down. The Environmental Protection Agency estimates that about 20 million tons of sulfur dioxide is emitted annually into the atmosphere from utility sources. Twenty million tons every year. Much of this SO_2 is spewed from tall stacks, assuring that the pollution will travel hundreds of miles before it falls back to Earth in its acidic form.

Unfortunately, my State of Vermont has been among those on the receiving end of those emissions. One does not need to be a meteorologist to know that our Nation's prevailing air currents flow from west to east. Vermont is in the east. Most of the sources of sulfur dioxide and nitrogen oxide, the two primary precursors to acid rain, are found to the west of Vermont and New England.

Vermonters have paid the price for acid rain. Now others must also shoulder the burden.

Does this mean that the Northeast deserves special consideration? Of course not. But it does mean that Northeast deserves equal consideration. All regions of the countries are entitled to have air that is at least clean enough for our trees to grow and our lakes to support life. The Northeast deserves to have air that is healthy for the people to breathe.

There will be regional disagreements over the acid rain title of the bill. I think there is agreement, however, that the 10-million-ton reduction is warranted. It is my view that the structure of the acid rain title fairly distributes the burden of the required reductions. There will be economic impacts. I will not deny that. But I believe the structure of the bill minimizes the economic impact and distributes the costs as fairly as is possible.

Twenty million tons of sulfur goes up. The air currents carry it from west to east. Along the way, 20 million tons comes down.

Earlier this year, President Bush proposed an innovative plan to reduce annual sulfur dioxide emissions by 10 million tons and to maintain these reductions in future years by capping them at the reduced level. The acid rain title of the bill before us is largely based on the President's proposal. Among the changes made by the Environment Committee are a more aggressive timetable, and a nitric oxide program that has been clarified to assure reductions of this pollutant.

The cap on sulfur dioxide emissions is a vital and necessary component of the bill. The cap gives us assurances that the reductions will be maintained over time, so that we do not find ourselves struggling to cope with 20 million tons of sulfur emissions again in the year 2020 or 2050.

How will we accommodate economic growth without increasing sulfur emissions beyond the year 2000 level? The options are numerous. We burn cleaner fuels. We use energy more efficiently. We install nonpolluting generators. We reduce demand through conservation. We shift electrical loads. We use renewable energy sources. We build cleaner powerplants. It can be done.

EPA estimates that by the year 2000, after utilities have complied with the emissions reduction requirements mandated by this bill, emissions of sulfur dioxide from utility sources will still be approximately 8.9 million tons per year. This pool of emission allowances should be ample to accommodate the emission needs of our Nation's coal-burning sources.

By establishing a system of marketable allowances of sulfur dioxide emissions, the bill allows for reductions to be achieved in the most cost-effective manner possible. Preferences are not given to one fuel over another. One region is not favored over another. Because the allowances can be bought and sold, those utilities required to reduce their emissions can choose to overcomply and thus generate surplus allowances. These allowances can then be sold to other utilities for whom reductions may be prohibitively costly. In this manner, a system of cost-sharing is established by the marketplace, and yet the emission reduction targets are met.

Recent studies have indicated that this system of marketable allowances will encouarge conservation and development of renewable energy resources. This is because utilities will have added incentive to explore demand-side management techniques in order to conserve their electric generation capacity.

Renewable energy sources will become more attractive since they will not require allowances to offset their production. This combination of conservation and renewable energy will serve to slow the rate of global warming, since these techniques do not have the carbon dioxide emissions inherent in the combustion of fossil fuels.

The acid rain title will generate much debate. There is much at stake in regard to both our environment and our economy. The committee bill presents a fair method for addressing both of these concerns.

Title VII of the bill applies to a family of man-made chemicals that have the dual detrimental effect of contributing to global warming and to ozone depletion. This title mandates the complete phaseout of chlorofluorocarbons, halons, and carbon tetrachloride by no later than the year 2000.

The need to phaseout CFC's and other ozone depleters has been widely recognized by scientific studies. The recently negotiated Montreal protocol gives international credence to this need. Many States have realized the global implications of CFC production and have taken action on their own to curb CFC production and use. Vermont has already banned automobiles equipped with CFC-dependent air conditioners, and is currently contemplating a complete ban of CFC's by 1994.

This bill tracks the phaseout schedule of the Montreal protocol and takes the additional step of requiring a complete halt in production of the worst ozone depleters by the year 2000. In addition, the bill will achieve reduction in emissions of ozone-depleting substances by requiring recapture and recycling of substances that have already been produced and are currently stored in millions of consumer products. Beginning in 1992, venting of these chemicals will be prohibited. By 1994, EPA must establish safe disposal techniques.

Some will argue that unilateral action by the United States is unwarranted—that it will leave us at a competitive disadvantage with other trading nations. They will support a deferral to further international negotiations such as the Montreal protocol. Indeed, the administration has already stated intentions to resume negotiations in this area.

But hesitance in the international arena should not preclude aggressive action on our part. The United States is the leading producer of CFC's, so it is logical that we should take the lead in moving away from these ozone destroyers. It is my belief that by assuming this stance, the United States will put itself at the forefront of developing and marketing safe alternatives.

Moreover, this is not purely a unilateral action. Other countries, including some of our most favored trading partners in Europe, have developed or are developing policies that are at least as stringent as those put forward in this bill.

Another issue that will be hotly debated is whether to place methyl chloroform on the list of restricted chemicals. It will be argued that the ozone depleting potential of this substance is far less than some of the more traditional CFC's.

Unfortunately, methyl chloroform is produced in such quantities that it contributes about 13 percent of the chlorine in the atmosphere. Further, because of its relatively short atmospheric lifetime, curtailment of this substance can perhaps be the biggest single step in reducing atmospheric loading of chlorine in the near term.

We must remember that it is not only the production of CFC's and other chlorine-based chemicals that is

39-059 O-91-11 (Pt. 1)

cause for concern. We must also consider the amount of these chemicals that are now stored in products currently in use. And we must strive to reduce the levels loaded in the atmosphere. It is the combination of production, release and longevity of these chemicals that poses a threat to human health and environmental stability.

Therefore, title VII seeks to eliminate production of ozone-depleting chemicals. It establishes a regulatory regime for recapture, reuse, and safe disposal of these chemicals that have already been produced and are currently in use. Finally, it will add to the phaseout list those chemicals whose higher production levels and shorter atmospheric lifetime make them candidates for achieving near-term reductions in stratospheric ozone levels.

The CFC title of the bill will be widely debated. I believe that inclusion of these provisions is both appropriate and necessary.

Title II of the bill addresses mobile sources of air pollution. It is generally agreed that combustion of fuels in automobiles is responsible for about half of the pollution that causes urban smog. In order for the more than 100 urban areas currently out of compliance with Federal air quality standards to have a chance of coming into compliance, great strides must be made in reducing pollution from automobiles.

In the past, technology forcing regulations have induced significant reductions in the levels of emissions from automobiles. It is widely recognized that growth in the overall use of automobiles has largely negated these emission reductions. This bill proposes that the Federal Government mandate tougher emissions standards for automobiles in two phases, and gives guidance to States in methods to reduce the number of vehicle miles traveled.

While past legislation has largely focused on tailpipe emissions, this bill also requires significant reductions in fuel vapors that tend to evaporate prior to combustion. These vapors can escape during refueling, as cars sit idlely in the Sun and as gas tanks heat up while in operation. This bill requires EPA to set standards to achieve the maximum possible reductions of these evaporative losses.

While much effort is being made to curtail gasoline emissions from automobiles, I am afraid we have included scant little that will encourage oil companies to produce a cleaner fuel in the first instance. A notable exception is a requirement that gasoline have a lower volatility—meaning it will have less of a tendency to evaporate. This requirement will yield significant improvements in the evaporative losses I just mentioned.

I have long believed that if we had less "garbage" in the components of automobile fuel, then we would have less "garbage" in the emissions coming out of the automobile. While the committee has had discussions on this garbage-in, garbage-out theory, it has been tough to reach a consensus on the best course of action.

Efforts have been made to develop an alternative fuel program to encourage production of inherently cleaner alternatively fueled vehicles. Senator CHAFEE has made great strides in reconciling the major points of disagreement, the underlying premise being that the final measure should be fuel neutral, meaning that no one fuel should be given an advantage over another.

As currently envisioned, the Chafee proposal would mandate the use of alternatively fueled vehicles in the worst nonattainment areas beginning in California, which is considering a similar plan on its own. Alternative fuels, such as methanol, natural gas, propane, and electricity can achieve substantial emission benefits over traditional gasoline-fueled vehicles.

These new vehicles, once in service, will have positive impacts on the smog problems of many cities. The transition to these cars will not be simple, but neither will it be beyond our capabilities.

Meanwhile, I believe a closer look at today's gasoline is in order. At the appropriate time, I will introduce an amendment calling for gasoline makers to produce a cleaner gasoline for use in cars that are on the road today. Over the past 20 years, the components of gasoline have changed considerably and this has caused problems for cities trying to comply with air quality standards. It has created difficulties even in estimating emission inventories. It is hard to estimate the effects of a given fuel if you are not certain what is in the fuel.

Recently, one major oil company announced a new gasoline designed to be substantially cleaner than standard gas.

My idea is to require that a gasoline with similar environmental benefits be sold in all nonattainment areas beginning in 1994. By 1997, this fuel should be available nationwide.

I support efforts to develop an alternative fuels program to be specified for the worst nonattainment areas. I support the tighter tailpipe and evaporative emissions standards contained in the bill. My amendment seeks to fill the missing gap—that of improving fuel components for standard automobiles that are already in service.

By moving to a cleaner fuel, we have the best chance to improve the air in all areas of the country, whether they are in attainment of the standards or not. Cars currently are responsible for about half of the toxic emissions in the country—we can reduce that percentage.

Variations in fuel quality can affect the performance of emission control devices—we can limit the variation and improve system performance.

A cleaner, more standard quality gasoline can yield substantial improvements in air quality. I urge my colleagues support when this amendment is offered.

Before closing, I would like to mention that I have talked about the most practical solution to the cleaner fuels situation. But, at the same time, we should also examine other alternatives on the pure fuel sides, and they are attainable. We can, for instance, develop electric cars and also can develop sources for electricity for photovoltaics that will have no environmental impact whatsoever. We should pursue those approaches.

Furthermore, obviously the most pure from a fuel source is hydrogen. Hydrogen combined with oxygen only gives you water. It does not give you CO_2 or any other pollutants. We should take a look especially as to busses and others that might be able to use a hydrogen-type engine. I think this is important as we look into the next century and beyond perhaps even the time schedule we have in this bill.

Mr. President, we have a strong, comprehensive bill before us today. Once again, I commend Senator BURDICK, Senator CHAFEE, and the subcommittee chairman, Senator BAUCUS for the leadership they have shown in preparing this legislation for the Senate floor. The majority leader, Senator MITCHELL, deserves praise for his work and for bringing the bill up on the first day of the second session.

The contributions of President Bush should not be overlooked.

I urge my colleagues to support this bill, to make your concerns be known, and to work to pass this much needed legislation.

I thank the Chair and I suggest the absence of a quorum.

The PRESIDING OFFICER (Mr. WIRTH). The clerk will call the roll.

The legislative clerk proceeded to call the roll.

Mr. KERRY. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered. The Senator is recognized.

Mr. KERRY. Mr. President, I rise today in support of the reauthorization of the Clean Air Act. I would like to begin by, commending the distinguished Senator from Maine, the majority leader, Senator MITCHELL, for his long-time efforts on this legislation. I enjoyed working with him in the past few years, in the effort to achieve a compromise, and I am pleased that, as majority leader, he is

committed to making this the first piece of legislation debated in 1990.

I also want to commend Senator BAUCUS and Senator BURDICK and the members of the committee, Senator CHAFEE in particular. I thank Senator BAUCUS for his efforts as the chairman of the subcommittee. He has fought hard to create consensus, although it has not always been possible on every aspect of this bill yet. This has been almost a decade-long labor and I know it has been his particular desire to see this Nation face up to its responsibilities across the spectrum of clean air issues.

This legislation, Mr. President, is long overdue, particularly, as it relates to tough controls on acid rain. This is not the first time that I or others have suggested that it is long overdue. This was crucial legislation during the 1980's. It was crucial during that period and that we have lost valuable time.

Now that it is 1990 and now that it is a moment when apparently more and more people in this country are becoming sensitive to the demands of environmental cleanup, we dare not delay any further.

As Lieutenant Governor of Massachusetts in the early eighties, I had the privilege of chairing the New England Governors Acid Rain Working Group. At that time the conclusion of the New England Governors could not have been clearer. Federal legislation was long overdue.

Again, in the mid-eighties, I had the privilege of serving on the National Governors Association Task Force along with my colleague Senator ROCKEFELLER and with chief of staff Governor John Sununu. At that time the determination of the task force was that acid rain legislation was long overdue.

And it was long overdue, Mr. President, each time that I sought to introduce legislation to deal with acid rain, as my first proposal submitted in the last two Congresses.

For more than a decade the President and the Congress have failed to act on this serious threat to our citizens' health and to our Nation's environment. Despite the fact that over 139 million Americans, close to half our population, has been living in communities that do not meet the legal health standards for air quality, our Government has failed to act.

Even with health professionals estimating that air pollution accounts for over 100,000 premature deaths annually and with the American Lung Association estimates that air pollution costs Americans $40 billion each year in additional health care expenses, Government has failed to act. This failure is an outrage. Obviously, citizens are rightfully angry and frustrated by the lack of responsible action.

Now we have before the Senate a comprehensive package of clean air proposals. While some modifications in some areas may make this legislation even better, this is a solid basis for our deliberations to begin and it is certainly a basis that demands we avoid delay or further procrastination.

As we well know, this package addresses three critical areas. It is not my intention at this time, Mr. President, to go through each and every one of those areas. However, I am pleased that it sets new goals for achieving acceptable air quality in areas that currently exceed pollution standards. In addition, I am particularly pleased that it regulates the emissions of dangerous air toxins. When we recognize the fact that only seven of the hundreds of toxic chemicals currently freed into the atmosphere and environment are regulated by the EPA, it becomes clear that immediate action is warranted.

The current situation places our population at enormous risk. We know the consequences of continuing to emit dangerous toxins and we must take action. I will come back at a later point in the debate to deal with some of those issues, Mr. President.

In addition, the Clean Air Act gives us an opportunity to take action, real action, to control the release of chemicals which cause cancer, birth defects and neurological disorders.

I am pleased that it directs the EPA to issue standards for about 200 toxic pollutants in a timely manner.

Finally, Mr. President, the area that I would like to discuss for a moment today, this legislation will limit emissions which cause acid rain. In the work that I have done over the course of the past decade in this area, I have focused a considerable amount of time and attention on this particular portion of the legislation and on these provisions. I am pleased that the legislation reflects some of the provisions of S. 57, the Comprehensive Acid Rain Prevention Act of 1989, which was the first piece of legislation I introduced in each of the last two Congresses.

Mr. President, the evidence is clear—it is cumulative and it is persuasive—acid rain and CO_2 emissions continue to damage our environment and to produce significant damaging health effects on our citizens.

Although we in the United States have made some definitive efforts to improve the air we breathe, experts say that we still emit roughly 15 percent of the world's sulfur dioxide, 25 percent of the globe's nitrogen oxide, and 25 percent of the Earth's carbon dioxide. These three pollutants are the major sources of the greenhouse effect, of ground level ozone, and of acid rain.

Moreover, NO_x, nitrogen oxide, which comes primarily from auto emissions and powerplants, is a primary contributor to ground level ozone, which is a major public health problem that has been linked to long-term lung damage. Furthermore, NO_x is also a key component of acid rain, and thereby it threatens fish, marine life, our lakes, our streams, it devastates forests and, more importantly, Mr. President, recent studies suggest that even low levels of NO_x can cause reduced lung function, chest tightness, cough, and may even reduce resistance to infection.

Obviously, the United States cannot unilaterally reduce air pollutants that are generated elsewhere, but as the primary contributor, we have a fundamental responsibility to lead, to set an example to the rest of the world. This legislation, if we resist efforts, temptations, and pressures to weaken its key provisions, will help us to reestablish the leadership role we had in the 1970's, and it will put us in an important, necessary, and strong position to be able to assist in Eastern Europe and in other parts of the globe to encourage and demand change.

I am concerned, Mr. President, as I think everyone of my colleagues are, that in the long run clean air legislation in this country runs the risk of being offset by worldwide pollution, particularly that of Eastern Europe.

A report issued by the World Watch Institute has stated, "The clean air gains in the West are quickly being negated by the unrestricted burning of high-sulfur brown coal and diesel fuel that is blackening cities across Eastern Europe and the Soviet Union."

At the end of the last session of Congress, I offered a series of amendments which were added to the Poland-Hungary aid bill and these measures now require that our aid be used in a way that is environmentally sound with respect to the development policies of those Eastern European countries. This is an issue I want to address further at a later point, but I do think it is important we stress the need of those hopefully developing democracies to be able to move to a market economy in a way that is sensitive to notions about sustainable growth and development. And it is equally important as we have focused on the rain forests and the issues of Latin and South and Central American countries we do so now in that industrialized portion of the Earth.

Mr. President, when I submitted acid rain legislation in the last two Congresses, I had sought to reduce emissions of SO_2 by 12 million tons per year nationally or by 50 percent by the year 2000. I also sought to reduce NO_x emissions by 3 million tons per year and to cut CO_2 emissions by 90 million tons per year while saving roughly 600,000 barrels of oil a day.

The proposal before us in the Senate demands less. It would reduce emis-

sions of SO_2 by only 10 million versus the 12; it would reduce NO_x by 2.7 versus the 3. I am pleased that it places a cap on total emissions from utilities and requires that the EPA restrict industrial SO_2 emissions if they are expected to exceed a level of 1.5 million tons below the 1980 levels.

However, this proposal is not as strong as what many people felt we ought to be doing, and it is in that light that I want to very strongly stress I will oppose efforts to reduce them further, and I hope this body will oppose efforts to reduce them further. They represent a minimal standard we ought to be applying at this point in an already delayed process.

I do believe, however, that 10 million tons and 2.7 is a definitive step forward, and it is better obviously than anything we have had on the table until this point in time. I believe it does represent important progress.

I also view the standards set forth in this legislation with respect to the health of our citizens and the deterioration of our lakes, rivers, streams, and forests in many regions of the Nation as a minimum across the board. Anything less than adoption by Congress of these requirements would be insufficient in meeting the minimal environmental responsibilities that we have not only to our own people but necessary to reassert our worldwide leadership in this area.

I commend the sponsors of the bill, Mr. President, for including stronger NO_x regulations than either the President's bill or the drafts that I am aware are now being considered in the House of Representatives. But I remain concerned about the lack of an overall cap on NO_x emissions, and I may well address that further in the course of this debate through the amendment process.

In every community in our country, Mr. President, people are expressing significant increased concern about Government inaction, even Government retreat, on a number of environmental fronts. I believe we must respond to those concerns.

During the 1988 Presidential race, for the first time in history acid rain became an issue and now, gratefully, we have a President who has suggested that the time for study is over and the time to act has arrived. We also have a Chief of Staff in the White House who is committed to action and with whom, as I stated earlier, I have had the pleasure of working on this particular issue. During the bipartisan National Governors' Association Task Force effort as well as the New England Governors' effort, I came to understand his desire to move, though clearly there were some differences with respect to approach.

Today, citizens throughout the Nation are more educated and more aware and more demanding about the dangers of both the human and environmental consequences associated with air pollutants. This is the time for action. On the basis that this is the first legislative effort of the new decade, I believe we are setting an appropriate example for what this Congress ought to be doing in setting an agenda for the years to come.

Mr. President, while endless debate has sidetracked action, Massachusetts and other States have suffered increased and severe damage. In fact, frustrated by the absence of a national clean air legislative effort, Massachusetts and other States have themselves enacted new restrictions toward reducing acid rain emission within that State. In my State, the regulations stem from a 1985 law. It is interesting to note that 5 years ago Massachusetts took this step in order to try to respond to something that the Federal Government is still only now at this stage debating.

It is interesting, Mr. President, that at that time we capped the amount of sulfur dioxide allowed to be emitted in our State, and we are expected to reduce SO_2 emissions in Massachusetts by 26 percent by the mid-1990's.

Why was Massachusetts willing to impose tough standards on itself when it only contributes 1.3 percent of the SO_2 nationwide and particularly when the majority of SO_2 that falls in my State damaging it so severely comes from other States? The answer is very simple. It is because our rivers, our lakes, our streams, our forests, our buildings, and our marine life had suffered for too long. In Massachusetts, we understood and recognized the consequences of that damage, and wanted to try to set an example about our seriousness and our need for other States to respond to those consequences.

We knew it with such certainty and with such concern, Mr. President, that even the modest improvements that such a cap could produce was deemed both necessary and helpful.

Furthermore, we recognized that some of our emissions at certain times also flowed downwind. They flowed not only downwind to New Hampshire or Vermont or Maine, but they flowed downwind to Canada, and we accepted our responsibility to try to set an example with respect to the relationship with our northern neighbor.

We implore the rest of the States of this country, many of which have never taken the steps to clean to the level that we have, many which have never reduced their emissions to the level that the EPA required them to in the course of the 1970's and 1980's, and we ask them to join us in that effort now.

Since 1983 an ongoing study has been conducted in Massachusetts by the Massachusetts Acid Rain Monitoring Project in order to put together a realistic data base with which to study the magnitude of acid rain's effects on our surface waters.

Last year phase 2 of the study was concluded and the results were released. The findings are portrayed in the chart that is behind me. The chart's findings and the study's findings are alarming. A total of 64 percent of the 1,200 water bodies that were tested were found to be vulnerable to acid deposition, over 20 percent were critically sensitive, and the darkest areas on the map indicate the 5 percent were found to be fully acidified—in other words, dead. These are areas where no life is sustainable. Again 5 percent of the lakes in Massachusetts are dead as a consequence of the level of acidity.

We have also learned that for the huge percentage of those lakes considered critically sensitive as the level of pH goes down the alkalinity goes up and, the ability of those water bodies to buffer against increased acidity, diminishes incrementally. The curve moves in the direction where the damage exceeds any capacity to catch up and an extraordinarily rapid downgrading effect is the result.

Mr. President, in Massachusetts as well as in other States we have already borne a considerable cost in order to clean up our air. We pay a higher price every day, higher cost associated in burning cleaner, more efficient fuels or in burning fuels more cleanly and expensively. But we have done literally all we can do ourselves, despite these higher costs, to clean our air on our own. There is no way that we can clean up what is deposited on us when it comes from another State. Our efforts to negotiate reductions with other States, some of which efforts I remember engaging in when I visited Ohio and met with Governor Celeste, or met with Governor Perpich, and Governors in other States—have proven fruitless because of the problems within those States, and a basic unwillingness to move at the same rate as some of their sister States.

Mr. President, no one allows their neighbor to dump garbage in their backyard. The laws prevent that. We do not allow communities to willfully damage neighboring communities. How is it that we have ignored the unfairness of upwind States freely admitting airborne garbage on their downwind neighbors? In fact, we permitted a policy where people were encouraged to build large smokestacks so that the air quality within the region of the smokestack was measured as being fine but no one stopped to think about the consequences of what was sent up to the higher level and where it traveled and where it fell.

This bill is long overdue in its effort to provide equity with respect to a remedy for that dumping process. The

Federal Government must restore basic fairness to the interstate disposal of waste, which is really what we are talking about.

The devastating consequences of acid deposition are not solely felt by estuaries, rivers, and other bodies of water, by aquatic life, by forests, or even by soils. We learned recently from a study last year that even the light, the shallow salt water bodies, such as the Chesapeake Bay, increasingly are being damaged by virtue of nitrate overloading that takes place as a consequence of the acidity of the water that falls on the soil and then leaches the minerals into the water causing algae bloom, oxygen deprivation for water life, and ultimately the death of those kinds of water bodies.

In Massachusetts, Mr. President, we also pay for other damages. Approximately $13 million is being spent each year to simply protect and restore statues and buildings that are eaten away by acidic moisture. In order to provide safe drinking water we spend $1.2 million per year to ensure that the tap water from Quabbin Reservoir, the main water supply for the metropolitan Boston area, does not exceed safe levels of toxics such as lead. That lead is again leached out of lead pipes by virtue of the higher acidity of the water.

If we take into account the health, the forests, and other ecological and financial impacts of this damage and you project it on a national scale, the deterioration and its effects are enormous.

Mr. President, we can look beyond, obviously, Massachusetts to see those examples of damages associated with acid rain. Close to home, on Camels Hump in neighboring Vermont, there has been a 40- to 70-percent decrease in the life expectancy of spruce trees over the past 20 years. In the 1983 survey, 10 to 30 percent of the standing red spruce in the Catskill, Adirondack, and Green and White Mountain forests were dead with the greatest mortality at the highest altitudes which is precisely where the acid precipitation is most abundant.

In the Chesapeake Bay the nutrients from acid deposition are choking marine life. And on Mount Mitchell in North Carolina where just 5 years ago spruce forest covered the peak, one can today find only raspberry bushes, clumps of sedge, and a few young trees.

According to an American Forestry Association official, conditions in southern Appalachia show the same damaging signs as the forest damage of the German Black Forest.

Mr. President, I want to share with you that as a firsthand observer of the Black Forest damage I believe that is a frightening prospect. When I served as chairman of the New England Governors Task Force on Acid Rain, I visited the Black Forest, some 7 years ago. What I found was a nation's heritage that was literally being destroyed by acid rain. When I met with their associated industries of Germany, the leader of the associated industries described to me how in Germany they were going to retrofit every single company and every single entity that was responsible for SO_2 emissions. I asked them how they were going to do that. Were they getting government subsidy, were they getting loans, were they getting a tax credit or a tax deduction? He answered, "No. We are doing this through our own capitalization process." And I said: "Why?" It was a very simple answer, Mr. President. He said, "Because we cannot afford not to. We are losing the heritage of our country."

According to German forestry officials, 80 percent of the Bavarian Alps are now damaged, 97 percent of the trees aged 100 to 120 are dying, including evergreens, birch, and firs, and 41 percent of the young trees are already showing signs of imminent loss.

If we cannot learn from the experience of other countries and prevent the same thing from happening, where already we have forestry officials in Georgia and in the Northeast telling us that they are noticing the same precursor of damage, then we fail to learn from history. I believe that we are peering into the future on that visit, and that is one of the reasons I believe so strongly that this moment is a vital moment for us with respect to this clean air opportunity.

Swiss scientists with whom I have visited, Mr. President, report that alpine lakes are virtually dead and cannot support fish life. In Norway, scientists estimate by the year 2000, salmon will no longer inhabit their coastal waters or rivers due to acid rain pollution.

In Norway when I was there, Mr. President, they told me of the 5,000 square miles of lakes that are dead today. In Sweden when I visited, they told me of 18,000 lakes that are dead and of the millions of dollars they are spending on liming in order to try to restore life into these lakes.

In Greece, according to engineers who have carefully examined those structures, the famous Parthenon is literally collapsing under the acidic bath of air pollution. And in nearby Quebec, a 1986 study found that 82 percent of the sugar maples in one area were dead or dying, making maple sugar production the lowest in centuries.

It is no wonder that acid rain control is perhaps a most serious demand on the United States by Canada, our most critically important ally, economic partner, and neighbor.

Moreover, Mr. President, we should not forget our basic responsibility to our neighbors to the north. Canada has made it clear over the past few years that the goal of achieving acid rain reductions within Canada from sources in the United States is one of Canada's highest priorities.

I quote Prime Minister Brian Mulroney:

> We know the cause of acid rain, we know the consequences, and we know the cure. The Government of Canada is firmly determined to end the plight of acid rain and expects the same genuine resolve from the United States of America.

Unfortunately, during the Reagan administration, the response was one study after another, and in their view, studies addressed the problem adequately.

I am delighted with the reversal of this policy that has been promptly initiated by President Bush. I look forward to the leadership he has provided and will be called upon to provide during the difficult debates that will occur during the legislative consideration of this particular bill.

Mr. President, from Massachusetts, from all of America, from the world, the data is in, and it is indisputable. The bill before us is based on the best scientific evidence available on acid rain.

The committee's excellent report documents clearly and compellingly some of the major scientific conclusions which form the solid foundation upon which I hope we will act. Issues that produced rancorous debate for most of this past decade have been greatly clarified.

Evidence on damage, for instance, has been quantified to make a solid case for the cost benefit questions. Information on difficult questions like the linearity of damage has been clarified. The relationship between what goes up the chimney, what comes down as acid deposition and the damage that it causes is clearer than ever before.

The patterns of the emissions migration have been clarified so that the relationship between smokestacks in the Midwest and dead lakes in Massachusetts is clear. Our technology for reducing emissions has advanced dramatically with energy efficient gains and cost reductions that reduce significantly the cost of dealing with this problem.

As one who has been involved in this fight now since I have come into public life, I have heard this debate develop. I have watched it evolve. I am completely convinced that we have a compelling case for action now. We do not need a stronger case. We do not need better evidence on what is happening. We are not wanting for a scientific certainty. We do not want more assurances regarding the economic costs.

We have sufficient evidence, and most of all we have had sufficient

delay. The issues associated with acid rain are complex, but the results are simple. Acid deposition is damaging our valuable assets all around the world.

It is my hope that we will act. I know the distinguished Presiding Officer comes from a State with deep concerns about the dislocation of miners and workers. There is obviously a tension between high sulfur coal and low sulfur coal. There are legitimate questions about retraining, about that dislocation.

But it is my belief, Mr. President, that when you balance the process by which we can do those things against the equities of all the other costs to us as a society, not to mention the cost to us as our position of leadership in the world, this moment becomes even more compelling and more possible in that light.

I know that the distinguished manager of this bill, the Senator from Montana, who worked so hard to bring us to this moment, is committed to working hard to guarantee that the various problems that still exist are worked on and listened to. I certainly want to be part of the effort, as I think I have been when previously I submitted a cautionary proposal when we were working in a whole different atmosphere on this legislation. But it is my hope that as Prime Minister Mulroney once said:

> The day Congress joins the battle to purge acid rain from our common environment will be a day of celebration on both sides of the border.

I hope we will give our allies to the north and throughout the world, as well as every American who cares about the environment, and our Nation a reason to celebrate, Mr. President.

I look forward to working with the Presiding Officer and the distinguished manager of this bill in the effort to do that.

Mr. President, we have had a lot of speeches about the environment. Almost a day does not go by that some Senator does not come to the floor and talk about global warming or deforestation or some aspect of environmental problems today.

The fact is that here we are in the first legislative effort of 1990, with something that we have wanted on the agenda for a long time, and the rhetoric ought to end. This is a time to measure whether people are really for the environment or not, whether or not they will put their votes where their mouths have been over the course of this past decade. It will separate those who talk a good game and those who are willing to legislate a good bill.

I hope, Mr. President, that as a consequence of all of our best actions and interests, this institution and this country, as a consequence of this institution, will be able to celebrate the passage of this most important legislation.

Mr. BAUCUS addressed the Chair.

The PRESIDENT pro tempore. The Senator from Montana.

Mr. BAUCUS. I strongly commend the Senator from Massachusetts for that statement and more particularly, for his tremendous efforts in two respects. No. 1, on behalf of efforts to begin to combat the global warming in this world, stratospheric ozone depletion, tropical deforestation. He has worked diligently, and I can think of no Member in this Senate who worked harder than he in leading this country and this world in addressing those problems.

The second respect is the strong degree to which he works for his own State of Massachusetts. The Senator who just spoke, the Senator from Massachusetts, does a terrific job, and people who live in Massachusetts should be very proud of the efforts that the Senator has undertaken. I know all of us in this body are equally respectful of what he has done. I compliment the Senator.

Mr. KERRY. I thank the Senator for his kind sentiment, and I look forward to continuing to work with him.

I thank the Chair.

VETO MESSAGE—H.R. 2712

Mr. MITCHELL. Mr. President, I have discussed with the distinguished Republican leader scheduling on the vote on the veto message on the Chinese Students Immigration Status Act.

As I announced last night, we will be debating and voting on that matter tomorrow. I am about to propound an unanimous-consent agreement that would fix the times precisely. This agreement follows my consultation with the distinguished Republican leader, who is present on the Senate floor.

UNANIMOUS-CONSENT AGREEMENT

Mr. MITCHELL. Accordingly, Mr. President, I ask unanimous consent that the Senate proceed to the consideration of the veto message on H.R. 2712, the Chinese Students Immigration Status Act, at 10 a.m. tomorrow. I further ask unanimous consent that the vote on whether or not to sustain the President's veto occur at 2:30 p.m. tomorrow, with the time from 2:10 p.m. to 2:20 p.m. reserved for the Republican leader, and the time from 2:20 p.m. to 2:30 p.m. reserved for the majority leader.

The PRESIDING OFFICER. Is there objection? Hearing none, it is so ordered.

Mr. MITCHELL. Mr. President, the prior unanimous-consent agreement regarding the time allotted for debate on this matter, which was agreed to yesterday, provided for 4 hours. I ask unanimous consent that that agreement be amended to be for 4½ hours and thereby be consistent with the agreement just entered into.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. MITCHELL. Mr. President, I thank the distinguished Republican leader for his usual courtesy.

CLEAN AIR ACT AMENDMENTS OF 1989

The Senate continued with the consideration of the bill.

Mr. SYMMS addressed the Chair.

The PRESIDENT pro tempore. The Senator from Idaho [Mr. SYMMS] is recognized.

Mr. SYMMS. Mr. President, my colleagues, it has been 9 years now that I have had the privilege to be on the Environment and Public Works Committee in the U.S. Senate. Each Congress, the Environment and Public Works Committee has passed a bill; each bill I have voted against, and each bill has died before it came to fruition and passed the Congress.

One of the problems that I see as a member of the committee is its regional imbalance—and I might say, Mr. President, it is not surprising that I was the only member of that committee that cast a vote against this bill.

I think there is good, sound reason why I cast that vote, and I do not say what I am about to say to, in any way, impugn the motives of my colleagues because I think all Americans want clean air. Clean air is a noble goal, but it is very interesting to hear my good friend from Massachusetts, who was just speaking about the fact that a large body of scientific evidence now says that we have a major problem with global warming. It was only 15 years ago, when I was a member of the House Agriculture Committee and we had witness after witness come before the House Agriculture Committee and tell us that the Polar caps are freezing, that we are going into an ice age, and we all need to start making preparation to migrate south closer to the equatorial zone of the Earth because the Earth was going to cool off again and we were going to freeze. Now the very same people, in the short span of 15 years, have reversed their position and now the big panic is global warming.

There well may be a problem with global warming, but I think that when we start acting with respect to legislation impacting the lives and the opportunities of the citizens we represent, we should consider some very basic, fundamental principles that have served this Nation so well.

One of those fundamental principles is that we try to maximize the deci-

sionmaking process outside of Washington, DC. This bill has quite an opposite effect. This bill has the long arm of the Federal Government reaching into the very lives of our citizens. It reaches into the lives of the county commissioners. It is going to tell the Governors how they have to run their affairs, and it is going to be very, very costly to the American people. There has never been a tax bill pass the Congress that has been as costly in one big chunk as this bill stands to be.

The regulatory costs and the range of the costs of this bill can go anywhere from $50 to $100 billion depending on whose set of figures you want to impose on the people each and every year. It is nice to get in there and talk about the air that people breathe and how bad it may be and how terrible it is for their health, but, given the cost associated with the bill, I think we also need to put in perspective that this bill, according to the figures the CRS has given me, will consume the entire life earnings of 95,000 Americans every year. What that means is that it will consume the earnings of one American's entire life at the rate of one American every 5½ minutes.

Mr. President, I have to say, with all due respect to my colleagues on the committee, that for the past 9 years that I have been on the committee—this is starting my 10th year in the Senate—in each Congress a bill like this has never been able to come before the Senate and even be dealt with by the Senate because it was so out of step with what the rest of the Senate thought.

There are major geographical regions in the United States of America that are not represented on the Environment and Public Works Committee. And those areas of the country are yet to be heard from on how they will be impacted. What is the impact going to be on the lives of the people in Indiana, in Ohio? How many people will be unemployed? The same people come in every day and say that we are losing out competitively to the Japanese or West Germans, and yet they are preparing to pass legislation which would impose one of the biggest regulatory costs imposed on America and America's working people than has ever passed or even been brought to the floor of this Senate, much less been debated on this Senate floor.

If this is the standard we are going to set for 1990 and the decade of nineties, I say, "God help the American people." They better grab their wallets and run for cover because, if the Congress is going to continue to pass legislation like this. I hope we will make substantial reforms in this bill or this bill will not become law.

In the past, when bills that were as offensive to the lives and to the opportunities and to the very happiness of the American people as this bill is, other leaders have chosen not to take up the Senate's time to discuss it. Now we are starting out because the President has asked for clean air legislation. The majority leader has asked for this bill to be the first one. So we are doing it, but I just remind my colleagues before I get into the details of the bill that in the last 2 months we have witnessed people all over Eastern Europe overthrowing governments that have tried to command and control the lives of their people on a daily basis. We have witnessed people flooding across the Iron Curtain, flooding through the Berlin Wall to get away from the very essence of what this bill is about.

This bill reaches into the lives of the American people in every facet of their life, and I say that if by some chance it did become law in its current form, that beware and start preparing today to explain to people some of the taxes that will be imposed in this bill on local governments, some of the regulations that will be imposed, some of the higher power costs people will have, explain to them and make preparations, my fellow colleagues and Mr. President, make preparations to be able to go back home in 10 years from now and explain to people why it is that they now generate all the electricity in Canada and wheel it back across the border so we can pay twice as much for it. Explain why we are imposing rules and regulations on the American people not even based on sound science. There is a whole body of thought that challenges the very premises of some of the titles of this bill, and I think we should debate those titles.

I think it is time we started debating the bill so that the other Senators who are not on the Environment and Public Works Committee can have time to study this piece of legislation, take a careful look at it, look and see how it is going to affect the people in their parts of the country. I hope we can have an extended debate here, not a filibuster, not anything to slow it down, but a good debate, talk about each section of the bill, and allow Senators the opportunity to go back to their home States, talk to the people in those States to find out what the impact will be on their States.

And when we need to consider, Is it really worthwhile? When you look at President Bush's bill, which I think probably in some areas goes too far, the best estimates of cost that I have been able to find on it say that it will clean up 98 percent of the pollutants out of the air that the committee bill would clean up, but it would do it for less than half the cost on the American people.

The question I think each Senator is going to have to make is how far do we want to go to favor clean air. Of course, we all want clean air. There has to be a balance. There has to be common sense applied to it. There has to be other considerations.

There is no doubt in this Senator's mind that the ability of Americans to breathe clean wholesome air, free from life-threatening pollutants, is intrinsic to the inalienable rights of life, liberty, and the pursuit of happiness which we declared to be ours at the inception of this Nation. Certainly disabling illness, confining respiratory disease, and life-stealing cancer are as much, or more, our enemy as anything we can face.

But, Mr. President, I think it is appropriate for Congress to look at this and seek a means to secure and protect the integrity of the air we breathe, and we have done that. For over 3½ decades, the means chosen by Congress has been embodied in what we know as the Clean Air Act. This is not a new act. We have a Clean Air Act.

In my opinion, we have made a lot of headway with the current Clean Air Act. We have done a lot better than we used to do.

The Clean Air Act we operate under today was Public Law 159 originally. It was signed into law July 14, 1955. A series of amendments have been enacted by Congress since that time in an effort to expand and to improve its effectiveness as a tool to combat air pollution.

As the clean air program has expanded, it has met with varied degrees of success. Certainly one of its original intentions was to bring about cleaner automobiles and transportation in general. And to a large part a lot of that has been achieved. Today's automobiles are 25 times cleaner than they were 20 years ago. Just think of that, 25 times cleaner.

(Mr. LIEBERMAN assumed the chair.)

Mr. SYMMS. One thing I would say to my colleagues, just as a note on the side, if today's automobiles are 25 times cleaner than 20-year-old automobiles, maybe the best thing we can do in the Senate would be to not do things that are going to raise the price of automobiles so that the working men and women of the country are priced out of the market and cannot buy a new automobile that is cleaner, 25 times cleaner, than the ones they may drive and that are forced to stay in the old fleet. I think it makes sense, Mr. President.

Other once-serious airborne health threats are coming under control as well. Ambient levels of lead and oxides of nitrogen are well within acceptable health thresholds in most parts of the United States. Just since 1978, carbon monoxide and sulfur dioxide levels have been reduced by a third. Even where health goals have not been

achieved, the quality of the air in U.S. cities is much better than it is in most other major industrial cities around the globe.

Mr. President, this improved air quality can be seen in the health of Americans. I know that people like to come on the Senate floor and gloom and doom and wring their hands and say people are being poisoned by the air. But, I would just like to point out some of the real facts. Since the turn of the century.

Life expectancy is 29 years longer,

Infant mortality—the incidence of a newborn dying before its first birthday—is down 90 percent, and

The incidence of incurable disease, including cancer, has dropped from 90 percent to 45 percent.

As we look for ways to continue this improvement, it is helpful to look back and see what has worked in the past—what has been successful in bringing about cleaner air—and what has not. The exercise reveals some valuable lessons, including the following three guiding principles:

The first one, of course, is allow freedom to work. Freedom works. That is what people are telling us all over the world. They want to be free. They want the same opportunities that we have had in the United States of America. They are trying to get the Government off their backs so they can be free to innovate, to make new, better, simpler designs.

The solution to pollution is innovation. It is better technology. It is not going to be resolved with the whips and guns of government. That is what those people are trying to get away from. We have it a lot better here than they have it in the countries that have a government telling everyone what they can do.

The unleashing of the human mind in a free society, resulting in entrepreneurial innovation and continuing technological conveniences, Mr. President, is our best hope.

The single greatest improvement in air quality in the United States came about with a small invention that we often just take for granted. We forget all about it—the electric motor. Where would we be without the electric motor? The electric motor has done more for clean air in this country than probably any other invention. Innovations that improve quality of life are happening all the time.

Ford Motor Co. recently developed a new catalyst that maximizes the control of auto emissions using a more cost-effective mix of platinum group metals. Arco Oil Co. recently started sales of a new leaded gasoline, EC-1, designed to achieve lower emissions from the cars still on the road that create the most pollution.

The interesting point is that neither of these new inventions that are so important, so beneficial to cleaner air in our cities where there are many, many automobiles being driven in very condensed areas, neither one of those came about because of the whips and guns of government. Neither came about because of the command of the political spectrum. They came about as a result of the marketplace, of prudent managers and corporations identifying ways to cut losses and to attract new customers.

History tells us every day that closed societies, where the Government controls technology and innovation, have dismal success records at achieving clean air goals. It is not surprising to me that the West Germans have had to waive the air pollutant standards on East German cars. East Germans have been recently fleeing to the cleaner air of West Germany, the free air, but also cleaner air. Their smoke-belching cars must be exempted from the West German emission standards as they roll through the Iron Curtain.

It is not a surprise to me, but if you look at this piece of legislation, you would think that the authors of this legislation paid no mind to what is going on in the world outside the little clique inside the beltway here.

There are some who claim that economic growth and technology is what threatens our health and the environment. Nothing could be further from the truth. It was William J. McIlrath who recalled the time when—

> * * * There were about 8,000 cars in the United States, only 10 miles of concrete pavement, few spray cans to destroy the ozone layer. * * * The air was relatively unpolluted * * * and our average life expectancy was 47 years.

Forty-seven years old when life was like that. Now it is up to 75 years and going up every day. Physicians expect it to keep rising and continuing to rise for the foreseeable future and that is because of modern technology. It is because of wealth created through a free enterprise, capital, profit-and-loss system of free men working through free institutions to be able to develop new, better, simpler, cleaner, and more positive ways to do things.

Modern technology can be credited for saving lives, and fostering a society in which technology thrives is the best way to assure hope for improved air quality. So it is overkill, throwing the baby out with the bathwater, as this bill does in my opinion. This bill could not be any more negative on what I foresee for the future.

I said to some friends of mine yesterday that the stock market dropped some 75 points on Monday and then it held its ground yesterday, that was when the meeting was. I said if the American people had any idea what was in the bill that is being debated on the U.S. Senate floor, the stock market would probably drop 750 points if they realized the cost of imposition, interference, entanglement that the long arm of government would be imposing on people to be able to make their own decisions; the lack of flexibility of county commissioners, the city mayors, and the Governors who will have to try to run the affairs of their State and local governments; the inability of business leaders to be able to make decisions, and the denial of the opportunity to have our system work that this bill carries with it.

Mr. President, the second principle that I think we need to look to—the first principal is that freedom works—the second principle is that we should adhere to sound science. If Government standards and emission limitations must be set, clean air goals are best achieved when those standards are firmly founded in the soundest of science.

The police power of the Federal Government exists, as Thomas Jefferson said, "only to defend our true rights and freedoms, and to take none of them from us." Such power should be used in the name of "cleaning the air" only when the best science has confirmed that cleaner air will, as a matter of scientific fact, be the result. Regulations and restrictions that lack a basis in sound science impose on the freedom of the individual, consuming time and resources, with the possibility of yielding little or no health benefit to show for it.

If that is what we are setting up to do, we do not know where we are going to take the economy of this country. We do not know what will happen.

Are we really going to pass this law and end up having squandered our resources? If we do that, then we have violated the principles of good government. And ultimately it will take its toll because we failed to apply those resources where they really could achieve cleaner air. It is what you can see and what you cannot see. If you spend all of your efforts on something that does very little good, you have no resources left to spend on the opportunity where you really could do some good. It is called opportunity cost, for those who are economists.

One of the most well-respected provisions of the Clean Air Act is its procedure for developing ambient air quality standards. The development of criteria documents, the exhaustive review of scientific studies, analyses and available literature is definitely time-consuming. But when attaining those standards could cost billions of dollars and force dramatic lifestyle changes on millions of Americans, any lesser priority on ensuring the absolute best science cannot be justified.

This bill is a question, in large part, regarding the application of the soundest science. I will have more to say about that later with some major

efforts to correct some of those parts of the bill.

The third principle that has worked very well in the past and I think it will continue to work in the future, is: Permit local flexibility. The Clean Air Act has been successful, to the degree that it has been successful, because it has adhered to one of its original findings and that is, "The prevention and control of air pollution at the source is the primary responsibility of the States and local governments."

The people who are closest to the source, whose lives as well as livelihoods are at stake, can best choose for themselves how they want to achieve their clean air goals. Leaving such flexibility to local and State governments allows them to develop the control strategies that are most likely to address the unique problems they face. It also allows them to craft the strategy in a way that a regulated community can appreciate and accept.

The mechanisms of the Clean Air Act have always worked best when there is common ground and consensus between the regulator and the regulated. Conversely, the act's most serious flaws have occurred where compliance is achieved only at the whips and chains of the Federal Government.

The Clean Air Act Amendments of 1989, S. 1630, represent the Senate and Environment and Public Works Committee's latest attempt to improve on the Clean Air Act.

Most people would say there is no dispute that we should make an effort to improve the Clean Air Act. Some people even go so far as to claim that there are 100 million people who are breathing air that is hazardous to their health. I do not see those people falling and dying in droves. I see people living longer and healthier. I have already cited those statistics, but people make that claim and they make the statement that 2 people out of 1,000 are not going to live as long, and so on and so forth.

I think this is a gross misrepresentation. That is my opinion. However, health standards have not been achieved in many of the America's major cities. That is what brings us to the effort to improve air quality. To the degree that the above principles leading to better air quality can be employed to address this problem, some improvement on the current Clean Air Act may be possible. And it may also be prudent, in a moderate fashion.

Unfortunately, Mr. President, the committee bill does not adhere to these three principles, but it, instead, relies heavily on the same command and control proposals that have been raised unsuccessfully in the past, time and time again throughout the last decade. At almost every turn the bill ignores low cost but efficient control strategies and instead adopts extremely costly technologically difficult provisions.

The bill seems to accept the flawed philosophies that individuals will become creative and innovative if you hold a large enough gun to their heads.

That has not been true in any of the countries that are having their Communist systems thrown up in their faces and are breaking down. But yet we are trying to apply that kind of force of government and threats of government to the very Americans who we are expecting to solve the problem. If such forcing actions were possible I would suggest, Mr. President, that the Communist bloc would be the greatest technological power in the world today. We all know that is not the truth.

We all know the truth. All we have to do is go behind the Iron Curtain. It is like stepping back 50 years, in terms of technology that the average man and woman lives with. In many places, this bill abandons any adherence to sound science, advancing billion dollar measures that may or may not improve the quality of the air we breathe. And it radically overhauls the way in which the Federal clean air program is administered through State and local governments, usurping many local decisions and foisting upon the local businesses a straitjacket of permits and enforcement.

The permit system in this bill is replete with opportunities for unlimited interferences and frustrations for the people of this country.

Mr. President, the bill does deserve some credit, more so than the previous clean air proposals reported by this committee. The bill reported this year does reflect a recognition that the marketplace can select opportunities for air pollution reductions more efficiently than can any centralized regulatory power.

Mandatory Federal emission warranties are rolled back in order to allow greater competition in the service and after-market parts industries, and the acid deposition title at least pays lip service to the concept of allowing the marketplace to determine where to most efficiently achieve acid reductions.

Because of this slightly new tone, the committee bill may serve as an acceptable framework for further debate. If it is to be successful in achieving our clean air goals, however, there are many provisions currently contained in this bill that must receive greater scrutiny. I sincerely hope that the fundamental principles of clean air can progress, that they can be infused into the bill during the course of the floor debate.

Mr. President, I am only going to address ambient air standards today on this bill, title I. But I do want to talk a little bit about that because it is a very critical, important part of the bill.

How to measure attainment? I think it is important that our colleagues get a grasp on this, understanding how it will affect their States. The committee bill divides areas of the country that have not attained national ambient air quality standards into four classes, each with different requirements and deadlines. These requirements become more stringent as the severity of the problem escalates.

A system which designates four categories of nonattainment is a vast improvement over a system that recognizes nothing but attainment versus nonattainment. However, making this categorization inflexible, and imposing rigid Federal requirements within each category, is very arbitrary.

The classification system needs to be more sensitive to local conditions so that local people can consider the geographic problems of the area; the natural, if you will, Mr. President, geographic area ambient air, natural air problems of the area as opposed to some rigid Federal requirement.

The design value: The bill specifically adopts the use of present ozone monitoring data and the present EPA approach of using the design value extracted from the data to define nonattainment.

The bill would actually increase the impact of these techniques by using them as the basis for classifying nonattainment areas for the purposes of assigning them to one of the four categories of nonattainment.

There are severe problems with EPS' approach to monitoring and the use of the design value, and those problems are compounded by the committee bill.

Every air quality area engages in monitoring, though there is no specific number of monitors. There can be as few as 1 or as many as 43. EPA's general guidance is to place these monitors where high ozone levels are likely to be found. Each locality collects hourly readings from the monitors. If over a period of 3 years, four readings from any monitor exceed the standard, then the entire area is classified in nonattainment.

That is real good for real estate values, I might say, Mr. President. So you might think about that, if your area is going to be put in nonattainment because of the fact—and I want to repeat this—over a period of 3 years, where there could be as many as 43 monitors, if four readings of the monitors are in excess of the standard, then the entire area could end up being classified as nonattainment.

If you have just invested a lot of money in a plant or factory or some of your constituents who work there are trying to get a loan and expand and stay competitive with the Japanese and it gets classified as a nonattain-

ment area, good luck. I hope you have a good explanation to the people who start losing their jobs and they come to you and say, Senator, where were you when this bill passed the Senate that imposed this kind of a standard on our area. We have a geographical problem. We are trying to meet some standard set by those in Washington, DC. We have this mountain in the clouds in the so forth and so forth and there is an inversion layer, and this is what is causing it and it only happens 1 day out of 10 years but it just happened here and now we are called nonattainment. That is the kind of problem that this bill has in it in this first title. It can stand to cause great problems for the people.

The fourth highest reading above the standard—the one that tips the area into nonattainment—is the design value, and is the future toward which efforts to reach attainment are targeted. This design value is frequently cited with an implication that it represents some measure of average air quality for the entire region. In fact, it is computed from the highest measurements from any monitor in the entire area.

The design value is not likely to be representative of overall air quality. It ignores other important considerations, such as the number of times per year the ozone standard is exceeded or how great it is exceeded.

Mr. President, it places no weight on the duration of the time that it is out of balance or exceeded. It does not recognize that different conditions may prevail in different parts of a nonattainment area, and the monitors are usually sited to identify the worst levels, not the average levels.

Given these problems, the reliance on the design value as the basis for the significant and extremely costly Federal mandates is ill-advised. The whole design value approach needs reform, and until this is accomplished this number should be given greatly diminished importance.

Mr. President, they are assuming that the worst air is in this nonattainment area, if it exceeds it for 1 day, that everybody in the area breathes that air all the time. It is not the case. It states a completely different problem. The risk assessment needs a real reining in. We have to understand the nature of the problem.

Perhaps the best argument for adhering to an attainment strategy with the greatest local flexibility is the degree to which attainment is sometimes more a function of local weather and topography than a matter of controls on industry.

There are sometimes local topographical, geographical, meteorological problems that exist that have a bigger impact on what happens than the specifics of what the industries are doing in that area.

Biogenic hydrocarbons. A great inequity currently exists in the way the Clean Air Act pursues the attainment. While the current focus on mobile and industrial emissions has met with success in some cities, those same controls have achieved no success in others, such as Houston and Atlanta. One of the reasons for this is the mere fact that not all the air pollution is manmade and as long as the clean air efforts focus only on man-made pollution—I think the scientists like to call it anthropogenic pollution—the real problems will not be solved.

A report prepared by researchers at the Georgia Institute of Technology summarize the problem as follows:

> The effects of natural hydrocarbons must be considered in order to develop a reliable plan for reducing ozone in the urban atmosphere. Trees can emit significant quantities of hydrocarbons to metropolitan areas such as Atlanta, and model calculations indicate that these natural emissions can significantly affect urban ozone levels. By neglecting these compounds, previous investigators may have overestimated the effectiveness of ozone abatement strategies based on reducing anthropogenic hydrocarbons.

Aberrations in the weather, another important fact that I have already mentioned. The current dependence on the design value also exacerbates the degree to which weather variations may completely distort the perception of real air quality conditions.

In a report analyzing ozone trends in 71 major areas, Dr. K.H. Jones notes:

> Last year was an abnormally hot one. As a consequence, the number of times that ozone levels in many areas exceeded the Federal clean air standard increased dramatically over the historical trend.
>
> In contrast, 1989 was much more in line with "normal" and the number of calendar day exceedances of the ozone standard in areas most affected by the drought decreased dramatically in a range from 64 to 94 percent.

All related to the weather, nothing to do with man-made pollutants.

The general public has been lead to believe that 150 million people are exposed to unsafe levels of ozone. This simply is not the case, in my opinion. In fact, based on 1986 data, over 70 percent of the Nation's people are living in areas that are monitored and show no ozone problem. Dr. Jones further notes that "the majority of U.S. cities where ozone levels exceed Federal standards will likely come into attainment within 5 years without additional controls. In fact, the 22 cities added to EPA's list of nonattainment areas last year should probably not even be on the list." To base significant and long-term air quality planning on such an abnormal situation lacks scientific integrity.

Mr. President, what are we doing here? We are getting ready to legislate something that is not based on scientific integrity, that some weather factor can happen, and all of a sudden an area is in nonattainment and they cannot get loans; they cannot get jobs; people are out of work. What does that do for people? There is such a thing as people starving to death. It is nice to starve to death with clean air, I guess. Maybe that is the way my colleagues feel.

We will pass the bill and everybody will have thousands and thousands of people out of work. The Japanese will continue to grab a bigger share of the market. With the booming Europe of 1990, now adding all those thousands of people, if they become free, we will become less of an economic leader than we were if we continue to pass laws as suggested by this committee.

If one were to come to this world from another planet and went around the world to decide where he would like best to invest his money and live, I believe he would say I would like to go to that place called the United States of America. They have great people. They have a great record. They did not get started 2,000 years ago. They are only 200 years old. Boy, they made an impact in the time they have been there. It looks to me like they are just ordinary people, but they have been extraordinarily successful. It looks like it is because they have been free.

If they came into the Senate today and read this bill we are suggested passing for the working men and women of this country, they would say, if they are going to pass laws like that in the 90's, it is hard to tell where that country is going to be in 2010. And maybe they will decide to settle somewhere else, maybe in Canada, where they could make the electricity and sell it back to the United States and our people can pay more for it—we can cut wages for people to make up the difference, so wages can go down, so power rates can go up if we are going to stay competitive. I think people ought to think about this.

Out there in the hinterland of America, outside this beltway, if there is anybody watching TV today—they must not have much to do if they are watching me speak, but if they are watching, they better start calling their Congressmen and Senators and tell them you better be cautious about what you are getting ready to shove down our throat with this Clean Air Act. We can only stand so much.

If we can get 98 percent of the pollutants out of the air with a bill that costs half as much as the one the committee is supporting, I think that would be a good place to start. I think the President's bill goes too far in some areas, as I have said, but it is a big improvement over this bill.

The more people read this bill, the more they study it, the less they are going to like it.

The advanced planning program. As this Nation embarks on another round of costly air control measures to

achieve clean air goals, it is essential that the mistakes of the past not be ignored and repeated. Many within the regulated industry believe the best way to accomplish a modernizing of our view toward attainment goals is through an advance planning program involving all levels of Government.

This advance planning program would develop better criteria for dividing and assessing when an area is in nonattainment, improve the accuracy of inventories which influence the control strategies, create a monitoring system which defines the characteristics of the problem, improve air quality modeling techniques and rank the cost effectiveness of control options, identifying why some controls have worked and why others have not. And then try to use those controls that work and reject those that have not.

The current drive to reach such ill-defined attainment goals may not be in the Nation's long-term best interests. Many localities have imposed extensive, costly control requirements only to find out that they must go back to the drawing board and seek to impose even more costly controls, the effectiveness of which have not yet been guaranteed.

It is imperative, Mr. President, that the Nation take its time now to assess the problems, and obtain better information to more thoroughly analyze possible solutions and advanced planning and programming would provide a solid basis for accomplishing this. It should be part of Congress' current activity of the Clean Air Act.

As a condition of any area of nonattainment being assigned to a particular category, the committee bill lays out a number of control options for areas to adopt. Apparently it is the view of the majority on the committee that the local planners do not understand air pollution problems they face, and therefore we are going to have Congress impose their judgment. The Congress knows what is best for you people. You people that live out along the banks of the Snake River according to this bill do not know what is good for them, but we know what is good for them in Washington, DC, and we are going to shove it down their throats. That is what this bill does. It will shove it down their throats whether they like it or not, and they will pay for it whether they like it or not, and it is going to consume the life savings of one American every 5 minutes. That is what we are talking about. That is what this bill does.

This is going to be the most costly piece of legislation to ever pass this Congress, imposed on the backs of the American people and at the same time the same Senators are going to run around the country and say, oh, we have got problems with trade, we cannot compete with the Japanese, we cannot compete with the Germans, and we cannot compete with who else. They will wonder why when they are passing legislation like this.

If this legislation passes, ladies and gentlemen, my colleagues, Mr. President, I will tell you this will be an absolute donnybrook to our economy. It may create another recession of its own weight. This bill alone has the potential to put this country at a real competitive disadvantage, and cause thousands and thousands and millions of Americans to have a lower standard of living. They may have cleaner air but they will not live as well. They can maybe have 98 percent as clean air as this bill would have for a third the cost. That is what some of the best estimates are. I do not know why we have to go so far overboard to throw the baby out with the bathwater.

NEW FEDERALLY IMPOSED REQUIREMENTS

Mr. President, another area that we need to discuss is the fee structure.

This is a real dandy. Perhaps the most encompassing of the committee's bill is a new imposition on ambient air pollutant sources, and the many varied fees to be assessed besides the basic $75 per ton fee for carbon monoxide, ozone, and ozone precursor and particulate matter sources, the committee bill includes the following: $2 auto registration fee.

This bill also requires areas in carbon monoxide or ozone attainment to impose an annual $2 fee on top of the current automobile registration fees. If a State or a locality fails to do this, EPA is empowered to levy the fee itself. I do not know what they want to do with the money. But I want everybody to know if they vote for this bill, then be prepared to explain to everybody that has to get a license for their car, unless this is changed and taken out of the bill, that they are voting to raise the fee by $2.

So I guess they can hire more people, more policemen, to go out and tell them to dig up their gas tanks that do not leak. It is what is happening right now all across rural America. When I was home during the last break, I talked to many, many people.

We had hearings in the State. School districts, bus districts, service stations are digging up tanks all over America, thanks to Uncle Sam in Washington. We are imposing it. Now we are getting ready to do it again in this case in the clean air bill.

This bill will require areas in carbon monoxide to impose this annual $2 fee, and if the State and local governments say we do not need the fee, we do not need the money, we do not want to impose it, then EPA is going to impose the fee on them. The fee is completely unjustified.

First, if a State or locality needs the revenue to operate their air quality programs, they can figure out how to do it. They do not need this provision in the bill to do it. They can seek those revenues on their own. It is entirely possible that a State may want to impose fees on something other than auto registration in an attempt to encourage voluntary participation in some other program.

The committee provision excludes that kind of local discretion. I think that is a big issue. Others may not think that is a big issue, but in my opinion, that is a big issue that we are going to have people sitting along the banks of the Potomac telling people out along the banks of the Missouri River in Montana, or along the banks of the Snake River in Idaho that they do not know what is best for them, but we know what is best for them in Washington, DC, and we are going to shove it down their throat whether they like it or not.

Furthermore, there is no equity in such a fee. Automobile emission controls are built into the cost of an automobile when the owner buys it. Highway maintenance and construction undertaken as part of transportation control measures are also paid for by highway users in the form of a fuel tax which is paid at the gas pump.

Most State air program costs are due to stationary sources, not mobile sources. Consequently, this fee taxes car owners to cover the cost of completely unrelated air program administration. So automobile owners of America, grab your wallets and run for cover because the committee clean air bill is going to raise your taxes and it is going to start out at $2. If it is anything like what we have seen in the past, it will go up every year.

Should a State or locality refuse to assess the fee, the money accrues to the EPA in a special fund. Guess what? It is outside the appropriation process for the agency. So the EPA will have their own little nest egg of money that they do not have to come to Congress and ask for their permission to spend. So they can go out here and tell your constituents what they should be doing. Then you will go back home, my colleagues, and say "We don't have any control over that. We cannot control it." You have control over it right here. Take this out of the bill. We will give you an opportunity to take this out of this bill. So that will be one amendment that Senators could be prepared to vote for.

I want to quote what the Highway Users Federation has to say about this lulu. They say such a fee would in effect constitute a tax on vehicle ownership, the revenue is going to an ill-defined entity or EPA, whichever the case was, for an ill-defined purpose. It would also lead to enormous administrative problems since motor vehicles are registered, licensed, and taxed at the State or county but seldom metropolitan levels. Potential evasion of such localized fee might be fairly

likely. And the cost of enforcement would offset much of the revenue generated. Highway users accept responsible user fees when the revenues are used for highway improvements, but they resist being singled out to pay for general societal programs which should be funded by all taxpayers.

This portion of this bill must be stricken before the bill leaves the Senate. EPA budget add-on fee. In an apparent effort to completely bypass the normal appropriation process of the Congress, the committee bill makes anyone already paying a fee under other sections of the bill tack on an amount "as the administrator shall require," but at least $15 a ton to go to EPA.

Then, notwithstanding the provisions—requiring deposit of Federal revenues in the Treasury pending appropriation—revenues from fees imposed under this subsection shall be deposited into a special fund of the Treasury and shall thereafter be available for appropriation only to carry out the activities of the agency under this act.

Mr. President, that sounds like a tax to me. I am on the Finance Committee. We are supposed to have the say-so on raising taxes on the backs of the working men and women in this country. But this is in the Environment and Public Works Committee. This is a tax on a tax.

Then they have the gall in this bill to give it to EPA where we do not even have to appropriate it. There is no equitable basis for such a fee. The committee did not even entertain at any hearings or solicit any cost estimates on it. It was inserted as a leadership amendment at the subcommittee markup.

Here is another doozy, Mr. President: The $5,000 sanction fee. If an area does not come into attainment within the time specified for the category to which it has been assigned, one of the sanctions is to elevate the normal $75-a-ton emission fee to $5,000 a ton.

Now, there is a real flaw in this that is twofold. No. 1, the condition of attainment is not well defined and may be influenced by factors out of the control of the State regulators, and certainly beyond the control of an individual source.

A plant or factory, even one that reduced its emissions far beyond that required by the permit or by the State's implementation plan, could still be faced with a $5,000-a-ton fee, merely on account of an abnormally hot or abnormally cold year, because of the geography, meteorology, or some natural event that happens in the area. But they can still be imposed $5,000 a ton.

This fee is imposed on all major sources, which could very easily include—and I hope Senators will listen to this—pulp mills, drycleaners—Does anybody here in the Senate have drycleaners in their States? They can be fined with this. Or any other companies that are involved in painting, printing, plastic coating, solvents, electronics. Many, many small businesses, Mr. President, emit up to 100 tons per year.

So if you have a small business, it is possible that a small printing shop, cleaning, solvent shop, a small paint or repair shop, automotive, or other shop could easily emit up to 100 tons per year, and that would mean that it would end up getting a one-half million dollars a year fee imposed on it.

I venture to say, Mr. President, that it is pretty easy for the Senate to pass a bill that would carry one-half million dollars for a small business fee to be imposed on them over and above all their other costs, even though that small business might not even do one-half million dollars' worth of business, much less make one-half million dollars in profit that it could be able to turn over to the Government.

I mean, it is an outrage. I hope my colleagues will take this bill and study this bill tonight and the next night and the next night, and we will talk about a clean air bill. I said this in the committee, Mr. President. By the time this bill gets to the Senate floor and Senators begin to read it, it is going to smell like a bag of rotten fish. As we are trying to clean up the atmosphere, are we trying to pollute America with big government? How does that clean up the atmosphere in America?

Freedom is what works, and sound science works, and good technology works. We are not doing that bad in the United States. We are not doing that bad on the clean air program. But to hear people here tell it, you would think we have the dirtiest air in the world.

I suggest to people that think the air is bad in the United States, maybe they ought to go to a foreign country and breathe a little, and when they come back, they will find out the air is pretty good here. It is not perfect, but we are making good headway.

Stage II, vapor recovery. This is another real interesting one, the issue of whether or not to force gas stations to adopt bulky accordion-like vapor recovery systems. That is not a new issue, but that was an issue of substantial debate when the committee considered S. 1894 in the 100th Congress.

EPA Administrator Lee Thomas, in testimony before the committee, had clearly voiced concerns about the duplicative overcontrol imposed by the overlapping stage II vapor recovery and on board canister provisions in the bill.

Now, it duplicates itself. "The administration," and I am quoting Mr. Thomas now:

> The administration is doubtful of the benefits of requiring stage II technology on gasoline pumps in order to control basically the same refueling vapors captured by the onboard control required on new cars by title II.
>
> Over the long term, this technological redundancy would lead to very high marginal costs and very little marginal improvement in the air quality.

This is a classic example of Government overkill. Mr. President, the highways to hell are paved with good intentions, and this is a classic example. My colleagues, I know, have good intentions, but this is overkill, double kill, to have redundancy, to do the same thing and impose these horrendous costs on the American people—for what? For very, very little improvement in the air quality.

Mr. Thomas went on and presented a graph prepared by EPA's Office of Mobile Sources, showing that by mid-1996, onboard canisters can be controlling the same and more hydrocarbon emissions as the stage II recovery systems mandated by this bill—assuming current enforcement.

Stage II enforcement is even more difficult. For the awkward and cumbersome stage II nozzle to work properly, it must be held so as to form a seal around the gas tank opening on the car. If you have not tried one of these, buy some fuel here from a station in the District of Columbia and you can see what I am talking about.

It is difficult for some people to do this. In fact, many people do not do it.

Stage II efficiency, as measured in the real world, is extremely low. New York State has not, with existing monitors, measured by ozone level reductions attributable to stage II.

Maybe what we can do, is take the fees we will impose on everybody, and we can hire somebody to work for the air control board of the Government, and they can stand there at the fuel station and be sure that everybody holds those stage II little accordion vapor locks up next to the tank exactly the way it was designed to work to keep it on.

This is one of the most ridiculous things I have heard come out of Government, to try to impose something like this. We have self-service gas stations, in case most of you have not noticed. It is not a matter of training the people who work at the service station to do it. You have 50 million Americans filling up their own cars out there. If you want to hire policemen to stand at every gas pump to make sure everyody does this correctly, vote for this bill, but this Senator will not vote for it.

This is an absolute outrage to the American people, that we would even discuss something like this and bring it to the floor. If people think they have a problem, let the people in those States take care of that problem.

In the face of clear evidence that the stage II requirement is ineffective, duplicative, some argue this duplication is necessary so as to control refueling emissions sooner.

Considerable evidence, however, discredits even that argument.

According to the New York State Department of Environmental Conservation, "the estimate for fully implementing a stage II program, in just the ozone nonattainment areas, is 5–6 years." If that is true, then the stage II program imposed by this bill could not be fully implemented until after onboard canister controls are mandated on all new cars in 1993.

And finally, there are the costs of this provision to consider. The Congressional Research Service estimates this provision could cost America's gas stations more than half a billion dollars. According to EPA, the capital investment required for stage II is at least $12,000 per gas station, and the petroleum marketers and service station dealers estimate it to be much more. After that, an additional $2,500 per year is required for maintenance. The Service Station Dealers of America, Inc. have estimated that these costs could force many service stations out of business, as many as 9 percent due to inability to finance the initial capital costs, and as many as 20 percent due to the annual maintenance costs.

Mr. President, I do not know whether my figures are accurate, whether they already counted how many stations were currently running out of business because of underground storage tank regulations being imposed on American rural and city gas stations today. It may be by the time we get this bill on the books, if it passes in its current form, our past sins will already run some of these people out of business. That is, unless we can get relief from EPA and pass the bill that my colleague, the junior Senator from Montana, has introduced to give a little time out there in America. I know in my State and neighboring Montana, Utah, Nevada, and many rural States, people are telling me in intermountain regions that 30 percent of fuel stations are already being closed because of the arm of big government imposing on them the cost of insurance, technical requirements, improved tanks that do not leak, throwing the baby out with the bath water. The American Service Station, Inc. estimated anywhere from 9 to 20 percent more would be closed by this bill. Whether that is before or after the fact of past Government intervention I do not know.

TRANSPORTATION CONTROL MEASURES

The bill requires States with serious and severe ozone and serious carbon monoxide nonattainment to revise their State implementation plans to include "transportation control measures" designed to dramatically curtail automobile use. These measures would not only demand radical changes in the lifestyles and restrictions on the personal mobility of ordinary Americans, but also impose further crushing burdens on large and small businesses. For example, the bill could require States to adopt measures like the following, or alternative measures that lower emissions by a comparable amount:

"Trip reduction ordinances," which likely could mean gas taxes, gas rationing, alternative driving days, or forced reductions in miles traveled per car or per person;

"Vehicle restricted zones," which could cripple business activity in downtowns and other commercial areas; and

"Programs for improved public transit," which could mean multibillion-dollar mass transit systems.

This is what I was talking about at the outset. This bill has the potential to make or break the future of millions and millions of Americans. What if you happen to be an American that had a job in the new shopping center somewhere in middle America or maybe in Connecticut or maybe in Montana or maybe in Idaho, or Iowa, or Missouri, but this shopping center had been put into place based on the fact that people were going to be able to drive their automobiles to get there? And then along comes the Congress, after the fact that people that bought their homes, they signed the mortgages, bought the cars, are sending the children to college, and all of sudden, lo and behold, Congress imposes something that is going to deny people the opportunity to use their car. All of sudden we find out for some reason nobody is going to that shopping center any more and it is going broke.

A number of national interests groups representing the mainstream Americans likely to severely impacted by these measures voiced the concerns to the committee. Among them were the American Automobile Association [AAA] representing the average driver, and the National Asssociation of Home Builders, representing those who are faced with the dilemma of putting homes in places where people will be able to commute back and forth to work.

Perhaps most indicative of the concerns voiced were those of the National Retail Merchants Association. In a letter to members of the committee, Tracy Mullin explained NRMA's position as follows:

> The bill includes provisions that would limit downtown access by imposing fees and charges on roads and parking, impose no-drive days and vehicle restricted areas and ban single-drive cars. In NRMA's view these measures are extremely inflexible, could well exacerbate downtown decay and may prove counterproductive by adding to traffic congestion in toll plazas or on roads that have not been restricted.
>
> In our view, each governor ought to be encouraged to find creative solutions to transportation concerns that best meet the need of each state.

I would like to reiterate that, Mr. President. Each Governor should be doing this, not Congress, not Congress directing, commanding the American people what they should do from our little ivory tower here in the Nation's capital. That is not our mission. Our mission should be to provide people with environment that they can live in that is clean, I agree, but that provides an opportunity for people to survive, to work, to save, to invest, to propose. This bill interferes with those very basic, fundamental values that Americans cling to.

OFFSET REQUIREMENTS

The committee bill requires those sources seeking new permitted emission authority to offset such emissions with reductions on some emissions sources one and a half times greater, in serious nonattainment areas, and double, in severe and extreme areas.

That the committee doesn't recognize how counterproductive such offset requirements are to true air quality improvement is astonishing. The chairwoman of California's Air Resources Board, an entity known for its willingness to adopt far-reaching measures to obtain even small increments in improved air quality, expressed her concerns with such offsets as follows:

> As with the existing Act, the bill requires that new or modified major sources obtain reductions in emissions from existing sources to "offset" the new emissions they create prior to receiving permits. However, based on the assumption that offsets are generally available, S. 1630 seeks to obtain a net air quality benefit from the new sources by requiring as much as a 2.0 to 1 offset ratio whereby the new sources must reduce twice the emissions it produces.
>
> Unless alternatives to the high offset ratios are provided, new sources otherwise desired by local communities are fully willing to meet stringent emission requirements, will find it very difficult to locate in the state. In addition some existing sources, particularly those with the lowest emissions, will find it difficult to expand or modernize their facilities in order to remain competitive in the marketplace.

Mr. President, that statement was form the chairwoman of the California Air Resources Board trying to tell the committee in advance what not to do. But, boy, we really paid attention. The most aggressive clean air State in the Union, some of the best expertise in air quality control in the Union, trying to tell us what we should not do, and we go right on and send the bill to the Senate.

Mr. President, this bill needs a lot of work. I say to my colleagues I intend to address each title of the bill in the next days in the debate.

And that concludes my first comments on the general picture of where we are with this bill on title I. But I think that we have a lot of work to do and I know many of my colleagues have worked very hard on this bill for very many years, but I say to my colleagues who are not on the Environment and Public Works Committee, I urge you to put your staffs to work on the committee report. I know, Mr. President, that there was only one Senator, and that is the junior Senator from Idaho, who voted against this bill in committee and the only one who filed minority views in opposition to the bill. But I urge my colleagues to have their staffs review those minority views then find out how it affects your States, and then I believe that with a lot of hard work and some discussions here in the Senate that this bill can be substantially improved.

Mr. President, I had a letter here I wanted to make a couple quotes from President Bush to put in the RECORD here today and I think it is important that the President's letter to Senator DOLE be read by all Senators. Basically the statement of the administration, January 22, outlines the President's position very clearly.

I have had the opportunity to talk to some of the President's staff people at the White House, Governor Sununu and others. I am convinced that if we do not make substantial improvements in this piece of legislation that this legislation will not pass the Congress. If it does pass the Congress, it will not pass the President's desk.

I urge all my colleagues to get the statement of January 22, 1990, from the White House, from the administration, carefully, read it, carefully apply it to the bill. We need to start working immediately to make major, substantial changes in this bill. This bill is replete with excesses of Government intervention and the denial of decisionmaking at the local level, a denial of sound science and technology. It is based on a premise that in many cases is faulty science and it should not be passed in its current form.

That is not to say that this Senator or any other Senator who might feel this way is not for clean air. But there is another side of this story that is yet to be told. I urge my colleagues to make some serious considerations on this legislation. How will it affect Indiana? How will it affect Ohio? How will it affect West Virginia? How will it affect certain States?

My State happens to be a clean State. The way this bill was written, it will probably always be a clean poor State because we will never be able to grow. The cap that is in the bill will require Inahoans to come up with money to buy certain pollution rights. That is another subject that I will discuss at a later date. I thank my colleagues for their indulgence.

Mr. President, I ask unanimous consent that the letter from the President, dated January 22, be printed in the RECORD.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

OFFICE OF MANAGEMENT AND BUDGET,
Washington DC, January 22, 1990.

STATEMENT OF ADMINISTRATION POLICY

(S. 1630—Clean Air Restoration and Standards Attainment Act of 1989, Baucus (D) Montana and 12 others)

The President, in a letter to Senate Minority Leader Dole dated January 19, 1990, reaffirmed his support for reauthorizing and strengthening the Clean Air Act.

TEXT OF THE PRESIDENT'S LETTER

Last July I submitted to the Congress a comprehensive proposal for reauthorizing and strengthening the Clean Air Act. That proposal was the result of a long and careful debate within the Administration, and reflected extensive consultation with Members of the House and Senate, representatives of affected industries, state and local governments, and environmental and public health groups.

Consistent with my belief that environmental protection and economic growth can be compatible, the Administration's Clean Air bill seeks to achieve public health and environmental protection in an economically efficient way by making extensive use of market principles. My comprehensive proposal carefully balanced our mutual desire for enhanced public health, a cleaner environment, and sustained economic growth. Even so, the cost estimate of the Administration's bill to the American economy is approximately $19 billion annually when fully phased-in.

As the Senate moves toward floor consideration of the Clean Air Act, I am convinced that we must maintain the balance reflected in the Administration's bill. Initial cost estimates of the Clean Air bill reported by the Senate Environment and Public Works Committee exceed $40 billion annually—more than double the cost of the Administration's bill. Yet the Committee bill provides little incremental environmental benefit above that proposed by the Administration. And the additional costs of some of the Committee bill's far-reaching provisions have yet to be incorporated in these estimates.

I want to sign a Clean Air bill this year—so that the 1990s can indeed be known as the "Clean Air decade." But I will only sign legislation that balances environmental and economic progress.

Specifically, I will only approve legislation which meets the following minimum tests of balance and reasonableness:

(1) The important environmental protections afforded by the Administration's bill must be maintained in the final legislation and preserved over time. The Administration proposes to: reduce sulfur dioxide emissions permanently by 10 million tons; achieve attainment of ozone, carbon monoxide and particulate matters standards; and sharply curtail the hazards posed by air toxics emissions. These represent critically important steps in achieving clean and healthy air for all Americans. In view of the environmental and health risks posed by acid rain; the fact that 100 million Americans now live in cities which are out of attainment with public health standards for ozone; and the estimate that current excessive levels of air toxics emissions may result in premature cancer deaths and other serious adverse health effects; it is vital that we move quickly and decisively to reduce these pollutants. The Administration's proposed bill would do just that.

(2) The bill should not impose aggregate costs on the economy that exceed the already considerable costs embodied in the Administration's bill—with an adjustment of no more than ten percent to reflect certain mobile source provisions added in the House Energy and Commerce Subcommittee on Health and the Environment. The House subcommittee added certain provisions affecting mobile sources to the titles of the bill which relate to non-attainment that will modestly increase the cost of these titles. Unfortunately, several provisions currently contained in the Senate Environment and Public Works Committee's bill—such as mandatory nationwide second phase tailpipe standards for automobiles, an inflexible second phase of air toxics control, and carbon dioxide emissions standards for mobile sources—cause the Senate bill to exceed substantially the cost of the Administration bill. The result of an excessively costly bill will be a less competitive American economy with fewer jobs for American workers.

The Administration has received letters from around the country, for example, indicating that a considerable number of plant closings could result from adoption of the Senate's air toxics provisions. The Administration has set up a task force under the chairmanship of the Council of Economic Advisers, and including the Environmental Protection Agency, the Office of Management and Budget, the Department of Energy, and the White House Office of Policy Development, to monitor and estimate the economic cost of various clean air proposals as the debate proceeds.

(3) Controls in the bill should be designed to achieve reductions in the most cost-efficient way—that is, for the least cost per ton of reduced pollutant. By incorporating flexibility and innovation in its recommended control strategies, the Administration's bill would allow environmental and health standards to be met in a way that creates maximum choice for both states and regulated industries and places fewer burdens on consumers. For example, the Administration's alternative fuels proposal will challenge the automobile and oil industries to produce cleaner vehicles and cleaner fuels at the lowest cost to the consumer.

The "command and control" approach embodied in several provisions of the Environment and Public Works Committee's bill—such as that which disallows "netting" for factories and commercial facilities seeking to meet ozone non-attainment standards in the most cost-effective way—results in the same environmental benefit, but at greatly increased cost and with sharply increased impediments to economic growth. Similarly, the provisions in the Environment and Public Works Committee's bill which move up emissions reduction deadlines while failing to provide incentives for clean coal technology needlessly inflate the cost of acid rain control.

(4) The system of emissions trading, which allows acid rain reductions to be achieved in the least costly and most equitable fashion, must be allowed to work. The Administration's proposed acid rain emissions trading program inherently reduces

the cost of any given level of sulfur dioxide or nitrogen oxide reduction, and provides an efficient mechanism for balancing the burdens imposed on any given region of the country. The Administration has provided information to several Senators which indicates that this trading system can dramatically reduce the impact of acid rain controls on electric utility rates in any given state, while at the same time reducing the cost of the overall bill by up to billions of dollars per year. In the first phase, the initial allocation of required reductions to 107 plants is essential to ensuring that effective trading opportunities exist. The trading system must survive in a form that achieves environmental benefits comparable to those in the administration's bill and involves a sufficient number of plants in the first phase to ensure its workability.

(5) The legislation must not include a national electricity tax to pay for controls, which would penalize consumers in those states which have already undertaken reductions by making them in effect "pay twice" for clean air. Supporters of such "cost sharing" argue that it is needed to address regional inequities. Any imbalance in control costs can be addressed far more effectively, efficiently, and equitably through the operation of a robust emissons trading system—which would not require new taxes.

The Administration took substantial time and effort to craft a balanced proposal. My staff and I stand ready to assist you and the other Members of both the House and Senate as you work to develop legislation which maintains this vitally important balance, and which does not violate one or more of the above mentioned "tests."

I look forward to signing legislation that will accelerate progress toward cleaner air for a growing America at the earliest possible opportunity.

Mr. BAUCUS. Mr. President, I will be very brief. The senior Senator from California is on the floor and wishes to be recognized. Very briefly, I would like to thank the Senator from Idaho for his statement. He is a member of the committee that reported out this bill.

This bill was reported out by the EPW Committee by a near unanimous vote; that is, Mr. President, every member of the committee supported this bill but for the Senator from Idaho. The Senator from Idaho was available and did contribute during all of the deliberations of the bill. There were many meetings, many formal hearings, many informal hearings. The Senator from Idaho was afforded more than an ample opportunity to make his wishes known at that time, although he did not make his wishes known nearly as much at that time as he did now. That is fine and that is certainly the privilege of the Senator from Idaho.

I have only one point to make here, and that is that when we ask ourselves what are the costs of this bill in the various States, what are the costs of this bill to the people of the various States, that we ask ourselves what are the health costs of people in all our States because of dirty air.

There are many studies, many compilations of studies which have documented the economic costs, dollars and cents economic costs, of dirty air in America that affect Americans all across our country, whether they are in the North, East, South, or West. The American Lung Association, for example, has compiled various studies which showed the economic costs only of dirty air because of auto emissions from automobile source emissions that range from the low end of $4 billion a year that Americans pay in economic costs because of dirty air up to the high end of $93 billion a year in economic costs Americans suffer because of dirty air.

That is just economic costs and that is only auto emissions or trucks and buses, mobile source emissions. That has nothing to do with additional economic costs of crop losses, agriculture losses because of ozone in particular. It does not even mention the economic losses attributable to air toxics, that is the chemicals, often carcinogenic toxics, that come out of some plants in our country. Nor does it mention the economic costs of acid rain in our country.

So the economic costs of dirty air, Mr. President, that fall upon Americans all across our country in economic costs that people pay because of health bills, hospital bills, and lost work, far exceed the highest exaggerated economic costs industry would have to pay to help clean up the air. And I underline the word "exaggerated."

We have not been able to see the basis, the hypothesis, or the assumptions of the exaggerated economic costs that some State will befall upon businesses across our country. And we would like to see those, because I think the assumptions behind those studies are inaccurate, they are fallacious.

The final point and the main point is that we should always keep in mind, as we hear all these ricocheting estimates of economic costs, to also keep in mind the economic costs of dirty air in America. Because those economic costs, all the studies that we are able to find demonstrate conclusively, far exceed the other side of the costs on the other side of the ledger.

And I have not even mentioned the discomfort, the tragedy of illness, the personal effects of illness. I have not mentioned death. There is between 2 to 5 percent increased illness and death in this country because of dirty air. When I say economic costs, I do not even include that because nobody can attach economic value to life.

This year, for example, in the Los Angeles area 3,800 people will die of benzine in automobile exhausts. Those people live their lifetimes in California in the L.A. area. That is only one chemical, one part of the country, to say nothing of other toxics, other aerial pollutants that affect people, causing premature illness or premature death.

So I say, Mr. President, that the comments of the Senator from Idaho have been helpful. But whenever we listen to those horror stories of the costs and how much problem this bill is going to cause to the American people, keep in mind the economic costs and the cost of premature death and illness that fall upon Americans because of dirty air in America.

I thank the Chair.

The PRESIDING OFFICER. The Senator from California is recognized.

Mr. CRANSTON. Mr. President, I rise in strong support of the measure before us, S. 1630, the clean air amendments of 1989. I commend Senator MITCHELL, Senator BAUCUS, who are handling the measure on the floor at the present time, Senator BURDICK and Senator CHAFEE for their herculean efforts in working so wisely and effectively on this issue, and their success in bringing this important legislation to the Senate floor.

S. 1630 is a tough and comprehensive bill. It renews the attack on ground-level ozone and carbon monoxide pollution which, despite our past efforts, continue to plague urban areas around the country. In addition, this far-reaching legislation confronts the issues of acid rain, air toxics, global warming, municipal incinerators, and CFC emissions—making S. 1630, in my opinion, one of the most important environmental bills ever to come before this body.

Action on this measure is long overdue. Despite numerous attempts, the Clean Air Act has not been amended in 13 years, yet more than 100 areas around the country still exceed the Federal standard for ozone; more than 40 areas do not meet the standard for carbon monoxide; and about 58 areas are out of compliance for particulate matter. Millions of Americans live in areas where the air they breathe is unhealthy.

My State of California has the unfortunate distinction of having the most severe air quality problem in the whole country.

Particularly troublesome is the problem of ground-level ozone pollution, commonly known as smog. California experiences approximately 75 percent of the Nation's population exposure to smog at levels above the national standards. Los Angeles, San Diego, Bakersfield, Fresno, Sacramento, Modesto, San Francisco, Santa Barbara, Stockton, Visalia, Tulare, and Porterville are all ozone nonattainment areas.

Mr. President, the adverse health effects resulting from continued exposure to ozone pollution is well-documented. The lungs are ozone's primary target. Ozone damages cells in the lungs are ozone's primary target.

Ozone damages cells in the lungs which causes inflammation and swelling of the passageways. Short-term exposure to unhealthy levels of ozone pollution can lead to chest and lung pain, labored breathing, and nausea. Children are particularly vulnerable since their lungs are not fully developed and early damage to the respiratory tract can increase the risk of respiratory disease in later life. Also at greater risk are people who already suffer from respiratory disease, such as asthma, emphysema, and chronic bronchitis. But ozone also affects healthy people. Scientists now believe that repeated exposure to ozone pollution over a long period of time may lead to permanent lung damage.

I do a lot of running. But I found it is not wise to run close to where there are a lot of automobiles along freeways or crowded streets. You run in part to develop your lungs and maintain your lungs. You have to be careful, even if very healthy, about where you run.

We should be able to wander around our country, our communities, totally free, without having such concerns.

S. 1630 would allow those areas, which currently are out of attainment for ozone, additional time in which to meet the Federal standard provided that specific control measures designed to bring these areas into attainment as quickly as possible are implemented. Nonattainment areas are divided into four categories—moderate, serious, severe, and extreme. The severity of the pollution problem in an area dictates the stringency of the control measures that must be implemented and the time in which that area must meet the Federal air quality standard.

The legislation also addresses the problem of carbon monoxide pollution. Carbon monoxide, another criteria pollutant, is emitted almost exclusively by motor vehicles. When inhaled, it interferes with the blood's ability to absorb oxygen. When inhaled by pregnant women, it is believed to threaten fetal growth and development. Under S. 1630, areas failing to meet the carbon monoxide standard would be divided into two categories and classified as either moderate or serious. Attainment deadlines would be extended by 5 years and 10 years respectively. All carbon monoxide nonattainment areas would be required to implement an enhanced vehicle inspection and maintenance program and an oxygenated fuels program. Those areas designated as serious would also have to implement specified transportation control measures.

The Los Angeles area, otherwise called the South Coast Basin, faces the worst air quality problem in the Nation. Ozone levels are three times the Federal standard; carbon monoxide and fine particulate levels range up to twice the national health-based standards. Air pollution costs the residents in the area as much as $13 billion a year in health expenses and damage to property and crops. The South Coast Basin has recently put together a plan designed to achieve attainment in 20 years as required under this legislation. In order to reach this goal the plan relies to a certain extent on measures that are technology forcing. This presents a problem under current law and I will be offering an amendment at a later point to address this problem.

Mr. President, any serious attempt to deal with air pollution must include strong technology-forcing tailpipe standards for all categories of motor vehicles. Motor vehicles are the single largest source of ozone and carbon monoxide pollution. Cars and trucks account for almost 50 percent of the ozone pollution and 90 percent of the carbon monoxide pollution in urban areas around the country.

The Federal tailpipe emissions standards in force today are the standards established in the Clean Air Act way back in 1970. They have not been strengthened since then. The number of vehicles on the road has increased dramatically, as has the number of miles driven by motorists. As a result EPA is projecting that for the first time in 20 years, pollution from cars and trucks will begin to increase again unless tailpipe emission standards are tightened.

Unlike the Federal Government, California has continued to make strides in this area so that—I'm proud to say—California now has the strictest standards in the country. Despite a 50-percent increase since 1970 in the total number of vehicles on the road in California and a 65-percent increase each year in vehicle miles traveled, emissions from vehicles have decreased dramatically. By setting tough standards California has spurred the major technological advances that have been made in automobile pollution control. I take great pride in these accomplishments of Californians.

Recently, out of frustration over the lack of Federal leadership on this issue, and in recognition of the fact that tougher tailpipe standards are absolutely essential in order to meet Federal air quality standards, eight States in the Northeast announced their intent to adopt automobile emissions standards as stringent as those in California.

S. 1630 contains strong emissions standards. These standards are divided into two tiers. The first tier of standards would go into effect in 1993. Light-duty vehicles would have to meet a NO_x standard of 0.4 gram per mile and a hydrocarbon standard not to exceed 0.25 gram per mile. These standards are not technology-forcing at all, they simply require at the Federal level the standards already adopted in California.

The second tier of standards would go into effect in 2003. Emissions standards for hydrocarbons, NO_x and carbon monoxide for cars and light trucks would be reduced to half their 1993 levels. The tier two standards will require certain advancements in technology before cars meeting these standards can be mass produced. However, already there are demonstration cars that meet these standards in certification testing. S. 1630 gives us 13 years in which to come up with the technology on a large scale. Those who say this cannot be done—those who anticipate failure—are selling us short.

The Air Resources Board in California is the best organization in the country working on this problem. Several Senators have made that remark to me in the course of the beginning of consideration of this measure. So it is not just my view.

Already in California, the Air Resources Board has taken the first step in adopting a regulation that would require low emitting vehicles and ultra-low emitting vehicles in Los Angeles in 1994. This plan would require that the tier two standard for hydrocarbons specified in S. 1630, which go into effect in 2003 on a national level, will go into effect for a percentage of vehicles in Los Angeles beginning in 1994—9 years ahead of the Federal schedule. And the tier two standard for NO_x would go into effect in a percentage of vehicles in California beginning in 1997—6 years ahead of the Federal schedule.

In addition to the mobile source provisions already in the bill, severe and extreme ozone nonattainment areas around the country will need additional emissions reductions that can be achieved through the use of clean fuel vehicles. Clean burning alternatives to gasoline are absolutely necessary and cannot be overlooked in Federal legislation if many areas are going to accomplish the mandated air quality.

In southern California, more than 50 percent of our smog is directly attributable to mobile sources. Southern California will not be able to meet federally mandated air quality standards unless it moves to clean fuel vehicles. This is true because of California's rapidly growing population, the shortage of affordable housing close to jobs, and the corresponding increase in vehicles and vehicle miles traveled. The South Coast Air Quality Management District plans to have 40 percent of cars and 70 percent of trucks and buses running on clean fuels by the year 2000. The success of local plans trying to move in this direction is uncertain unless the Federal Government takes this opportunity to make sure that these vehicles and clean

fuels are made available. However, the clean fuels program must be a complement, not a substitute for the tier two tailpipe standards.

Mr. President, title II also includes a carbon dioxide standard which would essentially require that light-duty vehicles, beginning in model year 1996, meet a 33-miles-per-gallon fleet average, increasing to 40 miles per gallon in the year 2000. The United States is the largest contributor to global CO_2 emissions and has a unique responsibility to provide leadership in what will have to be a global effort to resolve the problem. So far we have failed to provide that leadership. We cannot afford to drag our feet any longer. In the short term we must take reasonable steps first to control our CO_2 emissions and move then, as more is learned, to reduce our total emissions. The first step is to become more efficient in our energy use. Thirty percent of our total CO_2 emissions comes from mobile sources. Requiring that our cars and trucks become more efficient is a step in the right direction.

Along the same vein, title VII of this legislation addresses the issue of depletion of the Earth's stratospheric ozone layer. This new title is similar to a bill introduced by Senators CHAFEE and BAUCUS last year—S. 491. I was a cosponsor of that legislation and I strongly support its inclusion into the bill pending before us. If we have learned anything at all, Mr. President, it is that we must stop looking at these issues as if they existed in a vacuum, separate from one another. They are inextricably linked. Action taken in one area has widespread repercussions in other areas. We need to approach these issues in a comprehensive manner. This is exactly what S. 1630 attempts to do.

Again, I congratulate Senator BAUCUS and the other architects of this measure for their great work.

Finally, I want to mention section 111 which deals with Outer Continental Shelf activities. The Outer Continental Shelf Lands Act of 1978 delegated authority to the Secretary of Interior to perscribe regulations for OCS oil and gas activities to the extent that the emissions significantly affected onshore air quality. This responsibility was delegated to the Mineral Management Service. There has been ongoing litigation in California since 1981 when California filed suit alleging that Interior's rules were not adequate to protect onshore air quality. It is now 9 years later and this issue has still not been resolved. Interior has failed miserably in its many attempts to come up with a satisfactory rule.

The OCS provision in this bill directly addresses this situation by transferring jurisdiction of OCS air emissions from the Department of Interior to EPA and requiring equitable treatment of onshore and OCS pollution sources in the same air basin. The underlying premise is simple—OCS sources contribute to the onshore air quality problem therefore they must do their fair share to contribute to the solution. Without it, many areas along the coast in California and the Gulf of Mexico may be hindered and possibly prevented from reaching attainment because of OCS pollution. With the provision that is now in the bill, OCS sources will be required to use the same or similar pollution control requirements as onshore sources. It will end the disparity in regulation that currently exists and ensure that all sources are consistently and fairly controlled.

Mr. President, in 1970 when the Clean Air Act was initially passed, the stated intention of that legislation was to bring all areas of the country into attainment thereby assuring clean air for everyone. Despite subsequent amendments and the passage of 20 years we still face a public health crisis due to air pollution. With this bill we are attempting finally to deliver on our 1970 promise. No one denies that it means making certain sacrifices or that it will cost money but what is the alternative? You cannot choose not to breathe the air. You need clean air.

S. 1630 is a very good bill. Its purpose is to achieve clean, healthy air for everyone. That is what the American people expect—that is what they want. That is what they have waited for a long time. We must finally deliver on our promise.

I yield the floor.

Mr. BAUCUS. Mr. President, I thank the Senator from California, who has worked very hard on behalf of his home State particularly to clean up the air. As the Senator said, he enjoys the dubious distinction of representing the State of which the southern part has some of the dirtiest air in the Nation, that is, the Los Angeles basin is in a category of extreme in our four categories we set in our nonattainment provision, and the Senator from California has done a terrific job in helping craft this bill so that we begin to put southern California and some other parts of his State back into attainment.

I also want to point out, Mr. President, that the Senator in his statement mentioned that California needs a round two in tail pipe emission standards in order to reach attainment. We in our bill provide that California need only reach attainment in 20 years—that is, southern California, because Southern California, the Los Angeles basin is so far out of attainment, but the experts from California, the California Air Resources Board in particular, as referred to by the Senator from California, have said that California must have round two in order to comply with the provisions in this bill, and it wants to comply with the provisions of this bill. That applies not only to California, Mr. President, but also to the other most serious areas of the country.

Why do I mention this point? I mention it because there are some who say we should not enact round two tail pipe emission standards. As I said, the Senator from California and experts from California said they must have it.

I must go further and point out that round two provisions in our bill, which California says it must have, are really only the middle position. California is going much further than we are in this bill—that is, we in our bill provide that round two goes into effect in the year 2003—13 years from now. California says, that is right, we need round two, but the staff of the California Resources Board—and by the way, they have a good record because basically what they recommend is approved in southern California—recommends that California have a standard which goes into effect at an earlier date, much tighter and significantly earlier.

So I say, Mr. President, that the so-called tough round two standards that we have in this bill are the middle position. It is the middle position because it is fair and it is the middle position because that is a good national position. It is only fair and appropriate that if California wants to go further, even tighter than we are in this bill, it will be allowed to do so. In fact, that is the basic tenet of the Clean Air Act. There is an exception carved out only for the State of California because of California's unique requirements.

So again I compliment the Senator from California for his great work, and also I compliment the State of California for its leadership. They have a difficult problem and they have met it foursquare. I am, frankly, very proud of the efforts of the California Resources Board and am proud to be associated with the Senator from California in his efforts as well.

Mr. CRANSTON. Mr. President, I thank the chairman very much for those thoughtful words and for his recognition of what we have set out to do and what we are accomplishing in California. The point should be made clear that if we in California can set such high standards and make progress toward meeting them without disrupting our economy and can afford the costs as they fall upon us, then others can do it also. Clean air is needed everywhere, and if we can do it, surely the rest of the Nation can do it. We are making progress in California, and yet we have a very successful economy at the present time. There has been no disaster to the economy because of all this. I wish our air was as great as our economy right now.

But we are making progress in that direction.

I am delighted that Senator BAUCUS and others are committed to moving forward on this front. I want to assure the Senator that I will be on this floor working with him as we come to grips with the amendments that would water down this measure, as we come to grips with the other issues we will have to face in coping with the needs of clean air in our country.

I will be following the leadership of the chairman and doing my best to see he has the support and the troops are there when they are needed on crucial votes that we will be facing that will affect the lives and health and well-being of people all over this country—children, the elderly, everybody.

Mr. BAUCUS. Mr. President, I see the Senator from Virginia on the floor. I yield to him.

Mr. WARNER. Mr. President, the Senate is now taking up a truly historic piece of legislation as its first order of business in this 2d session of the 101st Congress. For the next several weeks, we will be debating S. 1630, the Clean Air Act Amendments of 1990, a comprehensive bill to address the serious environmental problems of ozone and carbon monoxide pollution, cancer-causing toxic emissions, acid rain, and ozone depletion.

As a member of the Senate Committee on Environment and Public Works, I voted with an overwhelming majority of the committee—all but one of the members—to report S. 1630 to the full Senate. During consideration of this legislation, it was clear that amendments to the Clean Air Act are greatly needed and long overdue. Indeed, as many of my colleagues have already pointed out, it has been 12 years since we have amended the existing clean air law. In that time period, this country has experienced dramatic change and growth. It is time for us in the Congress to provide EPA with the tools not only to keep pace with the changes that have already occurred, but also to anticipate future needs.

Last year, as in years past, the Committee on Environment and Public Works worked long and hard to produce a bill to address the air pollution problems we face today. I commend my colleagues on the committee, and in particular, Senators MITCHELL, BAUCUS, and CHAFEE, for their leadership on this important issue.

Mr. President, I also wish to commend the President for changing the terms of this clean air debate. It cannot be understated: President Bush broke a longstanding logjam against this legislation by sending the Congress a tough, credible clean air bill of his own. Only through this action were we able to hold any realistic hope of enacting a strong set of clean air amendments.

We have now reached the point, Mr. President, where each Member of the Senate must analyze this extremely complex legislation to determine not only the impact it will have on air quality but also its effects on the economy in each State and the Nation as a whole. And, above all, Members must determine who is going to pay the bill for these controls? I submit that individuals will be hit the hardest, because corporate America will certainly pass the costs on.

As we begin this debate, Mr. President, it is my judgment that the committee has produced a strong bill that will produce positive results in our fight against air pollution.

Of course, Mr. President, when any committee considers legislation as far ranging as S. 1630, it cannot possibly produce a perfect bill. As we will see when the substantive debate begins, the divisions that this bill creates are more along regional than partisan lines. The full Senate will no doubt work to improve those parts of S. 1630 that can produce more equitable treatment. It is my sincere hope that, in working to produce a bill that is strong, yet fair and cost effective, the Senate will act responsibly.

In the coming days, there will be many opportunities to discuss the details of this legislation. There will no doubt be a discussion of the cost of acid rain controls to be imposed on ratepayers, the feasibility of a variety of new requirements to be imposed on industry, and the possibility of reasonable, environmentally sound economic growth in the future. These are important issues, not to be considered lightly. As we take each one up in turn, I urge my colleagues to proceed with any amendments to S. 1630 with the deliberateness that a bill of this magnitude deserves.

Mr. President, that is the approach I intend to take in the days and weeks to come.

ADDITIONAL COSPONSOR—S. 2006

Mr. WARNER. Mr. President, I ask that the Senator from Virginia be added as a cosponsor of S. 2006, a bill to establish a Department of the Environment, sponsored by Senators GLENN and ROTH.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. WARNER. Earlier this afternoon, I was privileged to join with Senators GLENN, ROTH, CHAFEE, and DURENBERGER and Members of the House to meet with President Bush in the Oval Office. In that meeting, the President indicated that he will support the goal of S. 2006, and a comparable bill introduced by Senator DURENBERGER earlier this year, creating a Cabinet post for that individual who is given the responsibility to head up the Environmental Protection Agency.

This is a recommendation that took courage on behalf of these various Senators. I am privileged to be a cosponsor. It took even greater courage on behalf of our President, a man dedicated to trying to limit the size of growth in Government, but nevertheless recognizing that the time has come for the United States of America to join other industrial nations in making environmental protection of the highest importance, both at home and abroad.

In the words of Senator ROTH as he spoke to the President in the Oval Office:

> The future economic situation of America depends on competition, and we are in competition with other nations in the world that do not pay the attention that we and other major industrial nations do to our environment.

We should not allow other nations to gain an unfair advantage over American firms because they do not comply with basic standards of good environmental law. It is one of the hopes and aspirations of the President and those of us who sponsored this legislation that we will be able to have a stronger voice in the global community of nations, to see that all nations meet basic standards to clean up the environment globally as well as in our respective countries.

I thank the Chair.

Mr. BAUCUS. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The legislative clerk proceeded to call the roll.

Mrs. KASSEBAUM. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mrs. KASSEBAUM. Mr. President, I ask unanimous consent that I be permitted to speak as in morning business.

The PRESIDING OFFICER. The Senator from Kansas [Mrs. KASSEBAUM] is recognized.

THE FOREIGN AID CRISIS

Mrs. KASSEBAUM. Mr. President, a debate over the funding for foreign aid will be one of the most important issues facing us as we begin our work this year.

As Senator DOLE so clearly pointed out in his column in the New York Times, our congressional process of earmarking foreign aid severely hampers our ability to respond to the dramatic changes taking place. Over 80 percent of our foreign aid budget is earmarked, with only five countries getting over two-thirds of the foreign aid funds. With earmarking, we in Congress have set up a system that

prevents us from responding to opportunities such as in Eastern Europe or Panama.

The historic events of this year have put a spotlight on our foreign aid crisis. Our leadership role in aiding new democracies is threatened, I think, by these particular requirements.

But, Mr. President, our foreign aid crisis has been a problem for some time. The overall cuts in foreign aid, which began several years ago, have created a greater need than ever before for efficient management of funds and programs. There must be sufficient flexibility as well. Without flexibility, we will be unable to respond to changing world situations.

As a member of the Foreign Relations Committee, I reached the conclusion several years ago that the foreign aid process both here in Congress and the Administration can be improved.

Senator DOLE's proposal for a 5-percent cut in the top five earmarked countries has focused attention on these problems. I support that proposal. I hope it leads to the serious review and substantive reform our foreign aid process needs. The present system has resulted in the use of earmarks on an ad hoc basis. That is a far cry from the comprehensive review of our foreign policy goals and priorities.

In the 100th Congress and again in this Congress, I have introduced a foreign aid reform bill. Perhaps the most important change in this bill is that it will no longer allow congressional earmarks. The bill replaces this ad hoc approach with regional accounts, making our budget process more systematic. It also will distribute any budget cuts much more evenly. Furthermore, Congress would move to a budget process that parallels the administration process. It would also help relate our development programs directed to the needs of specific regions.

This reform would not remove Congress from foreign policy, but it would make our role more responsible.

Improving the congressional process is only one part of the equation. The executive branch is also required by the bill to make a number of management reforms aimed at reducing costs, keeping budgets lean, and maximizing efficiency.

Since I introduced my bill, the House established a task force to review foreign aid, and they have done some very important work over on the House side. However, there have been no hearings on the Senate side to date. I urge our committee chairman, Senator PELL, and the Foreign Relations Committee to begin a review of the foreign aid process. The pressure on our budget and the challenges to our foreign policy will only grow, not subside.

Mr. President, I yield the floor and suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The legislative clerk proceeded to call the roll.

Mr. DOLE. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. DOLE. Mr. President, I ask unanimous consent that I may proceed as if in morning business.

The PRESIDING OFFICER. Without objection, it is so ordered.

ADMINISTRATIVE DIRECTIVE ON CHINESE IMMIGRATION

Mr. DOLE. Mr. President, during the past couple of days, I have heard a lot about a Congressional Research Service memorandum that allegedly shows that the President's immigration directive is somehow subject to court challenge. I know that the CRS memorandum is cited in at least one "Dear Colleague" letter supporting a veto override.

And since we are going to vote tomorrow at about 2:30 on the Chinese student question and I do not have time to circulate a "Dear Colleague" letter, I thought most Senators would like to know that the general counsel's office of the Immigration and Naturalization Service has prepared a memorandum rebutting each and every claim or suggestion of illegality made in the CRS memorandum.

In fact, the INS memorandum unequivocally shows that the Attorney General has legal authority to grant a blanket waiver of the 2-year foreign residency requirement for J-1 visa holders—that the Attorney General can promulgate regulations that provide the Board of Immigration Appeals with binding rules of decision—and that the Attorney General can properly delegate much of his authority to administer and enforce the immigration laws to the Commissioner of the INS.

Mr. President, I ask unanimous consent that the entire text of the INS memorandum be printed in the RECORD.

There being no objection, the memorandum was ordered to be printed in the RECORD, as follows:

MEMORANDUM

This memorandum responds to the Congressional Research Service memorandum of January 22, 1990, which compares H.R. 2712 and the Bush Administration's immigration relief plan for nationals of the Peoples' Republic of China.

There are two matters that should be mentioned at the outset. The first is the allegation that the Administration's initiative is "vulnerable to court challenge." We cannot conceive of a single context in which any party would have standing to challenge in court the Attorney General's directives giving relief of PRC nationals. The directives benefit PRC nationals and harm the legal interests of no one.

Secondly, it is important to note, as the CRS memorandum does, that the benefits under H.R. 2712 that relate to work authorization, presumption of lawful status, and notification of expiration of stay are effective only so long as the Administration's deferral of enforced departure remains in effect. If H.R. 2712 becomes law, but the Administration's directive expires, the H.R. 2712 will not give any PRC national any independent basis for remaining in the United States lawfully, beyond the expiration of the Administration's directive.

1. WAIVER OF THE FOREIGN RESIDENCE REQUIREMENT OF EXCHANGE VISITORS

The CRS memorandum suggests that there exists no authority under current law to grant a blanket waiver of the foreign residence requirement which INA § 212(e) imposes on certain exchange visitors. CRS Memorandum at 6. It is important to note, however, that nothing in section 212(e) prevents the Attorney General from granting a waiver on a blanket basis. INA § 212(e), 8 U.S.C. § 1182(e). Even the CRS Memorandum acknowledges that section 212(e) "does not clearly preclude group relief." CRS Memorandum at 6. The Attorney General has authority to take such actions as he deems proper to carry out his authority under the INA. INA § 103(a), 8 U.S.C. § 1103(a).

The CRS Memorandum also suggests that the USIA Director's recommendation is problematic. CRS Memorandum at 6. However, the actions of the USIA Director and of the Attorney General clearly comply with the requirements of section 212(e). It is true that the USIA Director recommended that the Attorney General grant the waiver to all PRC nationals in the United States on June 5, 1989. The Attorney General granted this waiver. The USIA Director then sent a second recommendation, setting the date at December 1, 1989. The Attorney General also granted this waiver.

Next the CRS Memorandum suggests that the Administration's Directive is not clear on what PRC nationals must do to obtain the benefits of the waiver. CRS Memorandum at 6. Again, this is not correct. All a PRC national needs to do to obtain the benefit of the waiver is to file a nonfrivolous application for adjustment or change of status, or for an immigrant visa, at any time before January 1, 1994. It should be noted that H.R. 2712 had the same requirement: H.R. 2712 would have granted the waiver only to PRC nationals who filed nonfrivolous adjustment applications within four years of the date of enactment. H.R. 2712 § 2(a).

2. EMPLOYMENT AUTHORIZATION

The CRS Memorandum notes that the Attorney General has "ample authority under current law to carry out its work authorization relief." CRS Memorandum at 8. The Memorandum also notes that the Administration has granted this relief to a larger group than would have been covered by H.R. 2712. *Id.* Under H.R. 2712, only students and scholars would have received employment authorization. The Attorney General has granted this relief to all PRC nationals in the United States on June 5, 1989.

3. PRESUMPTION OF CONTINUED LAWFUL RESIDENCE

The CRS Memorandum suggests that the Administration's Directive may conflict with

INA section 245(c)(2). CRS Memorandum at 9. This provision bars the adjustment of status of most aliens who are in an "unlawful immigration status" on the date they apply for adjustment. INA § 245(c)(2), 8 U.S.C. § 1255(c)(2). The memorandum itself, however, notes that the Attorney General has authority to "set standards for lawful residence." CRS Memorandum at 12. There are "no detailed requirements for remaining in lawful status." *Id.* The CRS also notes that the Attorney General has authority to determine how long and under what conditions an alien may remain in the United States as a non-immigrant. *Id.* The source of this authority is section 214 of the INA. Regulations promulgated under this authority permit the extension of an alien's authorized period of stay. 8 C.F.R. § 214.1(c). In appropriate circumstances, these extensions can be granted even after the initial period of stay has expired, so long as the failure to obtain the extension in a timely manner is excusable. 8 C.F.R. § 214.1(c)(2). In addition, section 245 itself provides additional flexibility to deal with aliens who have fallen out of status "through no fault of their own or for technical reasons." INA § 245(c)(2), 8 U.S.C. § 1255(c)(2). INS regulations reflect this flexibility. 8 C.F.R. § 245.1(c)(2)(ii). The Attorney General has, in his discretion, deemed that the PRC nationals who cannot return to China at the present time are in an analogous situation. The CRS Memorandum notes that "the Attorney General may be able to assist PRC nationals to maintain lawful status through" the use of this authority. CRS Memorandum at 12. The CRS believes that regulations may be necessary to accomplish this result. *Id.* The Attorney General, however, already has the authority to exercise, in person, the authority given under INA § 214 and 8 C.F.R. § 214.1(c)(2). INA § 103(a), 8 U.S.C. § 1103(a); 8 C.F.R. § 2.1. Thus, additional regulations are not needed.

4. ASYLUM STANDARDS RELATIVE TO COERCIVE POPULATION CONTROL POLICIES

The CRS Memorandum notes that the Attorney General's directive conflicts with the decision in *Matter of Chang*, I.D. No. 3107 (BIA 1989), in which case the Board of Immigration Appeals denied an asylum request that was based on the alien's fleeing the PRC's population control policies. CRS Memorandum at 13ff. The CRS suggests that the Attorney General's directive may not bind the BIA and the immigration judges, since the Attorney General may not dictate results to the BIA in a given case. *Id.* at 16. The Attorney General may, however, reverse the Board after certifying a case to himself. 8 C.F.R. § 3.1(h)(1)(i). *Chang*, therefore, does not stand in the way of full implementation of the Attorney General's directive.

The CRS Memorandum also suggests that a regulation promulgated by INS to implement the Attorney General's directive may not bind the Board. CRS Memorandum at 16. The Attorney General himself, however, promulgated these regulations. Thus, there can be no question that these regulations will bind the Board and the immigration judges.

5. NOTIFICATION OF EXPIRED STATUS

The CRS Memorandum acknowledges that the Attorney General has the authority to notify PRC nationals of the expiration of their period of authorized stay, without initiation of deportation proceedings. CRS Memorandum at 17. The CRS also notes that there is no legal bar to the cancellation of orders to show cause that had been issued against PRC nationals who were in lawful status on June 5, 1989.

Mr. DOLE. Mr. President, let me add another point here:

As a result of President Bush's directive—not any law, but of his directive—the INS has granted work authorization to 4,852 Chinese nationals, waived the 2-year foreign residency requirement for 129 nationals—with 58 pending, adjusted 133 nationals to permanent resident status, and adjusted 465 nationals to temporary status. All this good work took place in a month—between December 19, 1989, and January 19, 1990.

During this period, not a single court action was brought challenging the INS actions. Not a single one.

So, I think it behooves the Senate to start focusing on real-life situations and not on hypothetical lawsuits.

Finally, President Bush has written a letter to me in which he points out—correctly—that the administration has provided relief to students and other Chinese Nationals that is, in fact, more favorable—and I would underscore "more favorable"—than the relief that would be granted by H.R. 2712. In this letter, President Bush also gives his personal assurance that he will never take any action that would force the return of Chinese students whose lives or liberty are at stake.

Mr. President, I ask unanimous consent that the entire text of President Bush's letter be printed in the RECORD.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

THE WHITE HOUSE,
Washington, January 24, 1990.

Hon. BOB DOLE,
U.S. Senate, Washington, DC.

DEAR BOB: You have asked how Chinese students in this country will be affected if Congressman Pelosi's bill never becomes law. I am writing to give you my personal assurance that no Chinese students will be disadvantaged in any way.

At my direction, the Attorney General has implemented a program that extends—and extends irrevocably—the same rights and benefits that Chinese students would receive under the proposed legislation. Indeed, we have gone beyond the legislation by providing work authorization for all Chinese aliens in this country, not just Chinese students, and asylum protection for all aliens under the threat of coercive family planning programs, not just Chinese aliens. Beyond that, you can rest assured that I will never allow any action that would force the return of Chinese students whose lives or liberty are at risk.

I hope this commitment provides the assurance some of your Senate colleagues were seeking.

Sincerely,

GEORGE BUSH.

Mr. DOLE. Mr. President, I would ask my colleagues or members of their staffs, when they receive the RECORD in the morning, to take a look, not particularly at my remarks, but take a look at the memorandum from the general counsel of the INS. I think it will answer many of the questions that I know some of my colleagues on this side have asked me about and perhaps some of the questions that Members on both sides have.

THE STATUS OF PENDING EXECUTIVE NOMINATIONS

Mr. DOLE. Mr. President, on several occasions during the closing weeks of the 1st session of the 101st Congress, I reported to my colleagues on the status of pending executive nominations. This is the start of a new year, the beginning of the second session. I will continue from time to time, to update my colleagues. This Senator is confident that all Senators will act in a responsible manner, to expedite the confirmation process in an orderly fashion.

To date, there are 99 nominations awaiting Senate action, the majority of which are pending in Senate committees. It is important to note however, that the Senate received 33 of those nominations from the White House just yesterday. I have been advised that possibly as many as 45 nominations will be acted on by their respective committees prior to the end of March. This is good news. Yet it seems that there are still a number of nominations which are not scheduled for committee action. I would hope that the committees would begin scheduling hearings to expedite these nominations.

Again, I would like to emphasize that this is a new year and a new session. I am confident that the Senate will work in a timely fashion to confirm the nominations, so that these men and women can perform their official duties, and allow the executive branch to operate at an optimum level of efficiency. The Senate has an obligation to the American public to act on these nominations so that our Government can perform its duties for all Americans.

I look forward to working with the majority leader, and Members of the Senate on both sides of the aisle to move as many of the nominations as possible in the coming months or, hopefully, the coming weeks.

Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER (Mr. BRYAN). The absence of a quorum having been suggested, the clerk will call the roll.

The assistant legislative clerk proceeded to call the roll.

Mr. DOLE. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

MESSAGE FROM THE HOUSE

The following message from the House of Representatives was communicated to the Senate by Mr. Hays, one of its reading clerks:

The House of Representatives having proceeded to reconsider the bill (H.R. 2712) entitled "An Act to facilitate the adjustment or change of status of Chinese nationals in the United States by waiving the 2-year foreign residence requirement for "J" nonimmigrants", returned by the President of the United States with his objections, to the House of Representatives, in which it originated, it was

Resolved, That the said bill pass, two-thirds of the House of Representatives agreeing to pass the same.

The PRESIDING OFFICER. The message will be received. Pursuant to the previous order, the reading of the message is waived. The message shall be spread upon the Journal and consideration laid aside until 10 a.m. on Thursday, January 25, 1990.

Mr. DOLE. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The absence of a quorum having been suggested, the clerk will call the roll.

The assistant legislative clerk proceeded to call the roll.

Mr. MITCHELL. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

MORNING BUSINESS

Mr. MITCHELL. Mr. President, I ask unanimous consent that there be a period for morning business.

The PRESIDING OFFICER. Without objection, it is so ordered.

SHIFT FROM DEFENSE, NOT AMERICA'S FRIENDS

Mr. HARKIN. Mr. President, last year, in an historic address to a joint session of Congress, Lech Walesa made an impassioned appeal on behalf of emerging democratic forces in Poland and elsewhere in Eastern Europe. The heroic labor leader said to us then:

We believe that assistance extended to democracy and freedom in Poland and all of Eastern Europe is the best investment in the future and in peace, better than tanks, warships, and war planes, an investment leading to greater security.

Democratic movements in Eastern Europe have taken the first step toward lasting independence. But the next several steps are the most daunting. For freedom to last it must be demonstrated that democracy and free-market economies bring real benefits—better jobs, more purchasing power and richer lives.

The historic changes sweeping across Eastern Europe have opened new doors for democracy. But they have also placed equally weighty responsibilities on democratic nations.

Eastern Europe demands more than speeches and promises. It needs effective action from the West. It awaits, according to Walesa, "an investment in freedom, democracy and peace—an investment adequate to the greatness of the American nation."

I am encouraged that the senior Senator from Kansas, in a recent editorial, accepts Walesa's conclusions by writing that "we have enormous opportunities to consolidate and expand freedom's gains and at the same time, to enhance America's security and economic potential."

To realize this potential, the article recognizes that freedom in Eastern Europe will cost us "bucks"—more American foreign aid.

The article's assessment of the problem is correct, but its proposed solution—across-the-board cuts from the five leading recipients of foreign aid—Israel, the Philippines, Pakistan, Turkey, and Egypt—which, not coincidentally, top the list of our most important allies—is wrong—dead wrong.

A 5-percent across-the-board cut—which totals $330 million—won't get the job done in Eastern Europe. Poland, according to Walesa, needs $10 billion over the next 3 years to rebuild its economy. While insufficient to meet our new friends' needs, Senator DOLE's proposed shift of funds will seriously harm our old friends.

You don't help our new friends by cutting off the legs of old friends. Mr. DOLE's proposed shift will likely damage our security interests in trouble spots like the Middle East and Asia. President Aquino of the Philippines still struggles to consolidate democracy against frequent threats from an unruly military.

Israel's security remains at risk so long as neighboring Arab nations threaten its existence. Equally important, as the peace process in the Middle East stays on track, why, now, pull the rug out from under Israel, and in the process, strengthen the hand of forces hostile to our most reliable ally in the region?

The other partner in the peace process, Egypt, would also be hurt by DOLE's cuts. Cuts in vital economic assistance to a poor country like Egypt could stir domestic upheaval and divert Mubarak from his role in the peace process.

Now is not the time to undercut the two major players in the Middle East peace process, Israel and Egypt, whose security and survival depend on continued levels of assistance from the United States.

Moreover, Israel's strained economy will be pressured even further by the influx of thousands of Jews from the Soviet Union. Have we forgotten that Soviet Jews, like Poles, Romanians, and others in Eastern Europe, are also beneficiaries of Gorbachev's political opening?

Shifting funds from an already shrunken foreign aid pie—which has decreased by 25 percent in real terms since 1985—is not only ill-advised, it is counterproductive to our security interests.

Instead, we should look to Lech Walesa for the solution. It was the Polish freedom fighter who said that assistance to Eastern Europe is an investment "better than tanks, warships, and war planes * * *." Yet, we currently devote 60 percent of the defense budget—or $180 billion—for the defense of democracy and freedom in Western Europe.

Events of the past year have changed our defense and foreign policy priorities which now are directed toward expanding democracy and freedom in all Europe. Our budget priorities should reflect those changes as well.

In the 1990's, Europeans await the flow of investments and aid from the West, not the movement of tanks and soldiers from the East. The principal threat to the expansion of European democracy in this decade is economic, not military. The Pentagon's budget, which is already bloated by years of the Reagan buildup, can stand a cut. The same cannot be said of foreign aid, which has been pared to the bone in the past 5 years.

If we were really serious about sustaining democratic movements in Eastern Europe and elsewhere, why not divert some real money to meet the pressing needs of freedom's newest friends? In a recent article, Charles Krauthammer proposes a 5-percent shift from our military budget for Europe, to underwrite democratic changes in Eastern Europe.

The idea is not new. Last year, the Bush administration found $430 million for Poland and Hungary in the defense budget. During the heyday of the United States war against Nicaragua, the previous administration shifted more than one-quarter of a billion dollars from the Pentagon to the phony freedom fighters, otherwise known as the Contras.

Why not divert some real money for the real freedom fighters in Eastern Europe? Krauthammer's transfer would shift $7.5 billion to Eastern Europe and Panama, while insuring that scarce aid resources would not be diverted from our old friends in the Middle and Near East and Asia.

The foreign aid budget should not be approached as a zero-sum game, especially when vital security interests and alliances are at stake.

MESSAGES FROM THE PRESIDENT

Messages from the President of the United States were communicated to the Senate by Mr. Kalbaugh, one of his secretaries.

EXECUTIVE MESSAGES REFERRED

As in executive session the Presiding Officer laid before the Senate messages from the President of the United States submitting sundry nominations and treaties which were referred to the appropriate committees.

(The nominations and treaties received today are printed at the end of the Senate proceedings.)

MESSAGES FROM THE HOUSE

At 6:04 p.m., a message from the House of Representatives, delivered by Mr. Hays, one of its reading clerks, announced that the House having proceeded to reconsider the bill (H.R. 2712) to facilitate the adjustment or change of status of Chinese nationals in the United States by waiving the 2-year foreign residence requirement for "J" nonimmigrants, returned by the President of the United States with his objections, to the House of Representatives, in which it originated, it was resolved that the said bill pass, two-thirds of the House of Representatives agreeing to pass the same.

EXECUTIVE AND OTHER COMMUNICATIONS

The following communications were laid before the Senate, together with accompanying papers, reports, and documents, which were referred as indicated:

EC-2189. A communication from the from the Comptroller of the Department of Defense, transmitting, pursuant to law, notice of the transfer of certain funds for Jordan; to the Committee on Appropriations.

EC-2190. A communication from the Secretary of Commerce, transmitting, pursuant to law, the annual foreign policy report for the period January 21, 1990 to January 20, 1991; to the Committee on Banking, Housing, and Urban Affairs.

EC-2191. A communication from the Secretary of Energy, transmitting, pursuant to law, a report entitled "A Compendium of Options for Government Policy to Encourage Private Sector Responses to Potential Climate Change"; to the Committee on Energy and Natural Resources.

EC-2192. A communication from the Deputy Inspector General, Federal Emergency Management Agency, transmitting, pursuant to law, the audit report on the administration of the Comprehensive Environmental Response, Compensation and Liability Act for fiscal year 1988; to the Committee on Environment and Public Works.

EC-2193. A communication from the Inspector General, Department of the Interior, transmitting, pursuant to law, a report entitled "Accounting for Reimbursable Expenditures of Environmental Protection Agency Superfund Money, Office of Environmental Project Review, Office of the Secretary"; to the Committee on Environment and Public Works.

EC-2194. A communication from the Assistant Legal Advisor for Treaty Affairs, Department of State, transmitting, pursuant to law, a report on international agreements, other than treaties, entered into by the United States in the 60-day period prior to January 18, 1990; to the Committee on Foreign Relations.

EC-2195. A communication from the Assistant Secretary of State (Legislative Affairs), transmitting, pursuant to law, certification that the strategic minerals currently imported from South Africa are essential for the economy or defense of the United States and are unavailable from reliable or secure suppliers; to the Committee on Foreign Relations.

EC-2196. A communication from the Acting Federal Cochairman of the Appalachian Regional Commission, transmitting, pursuant to law, the annual report on the system of internal accounting and financial management in place during 1989; to the Committee on Governmental Affairs.

EC-2197. A communication from the Comptroller General of the United States, transmitting, pursuant to law, a list of the reports issued by the General Accounting Office during December 1989; to the Committee on Governmental Affairs.

EC-2198. A communication from the Secretary of Education, transmitting, pursuant to law, the annual report on the system of internal control and financial management in place during 1989; to the Committee on Governmental Affairs.

EC-2199. A communication from the Secretary of the Mississippi River Commission, transmitting, pursuant to law, the annual report of the Commission under the Government in the Sunshine Act for calendar year 1989; to the Committee on Governmental Affairs.

EC-2200. A communication from the Secretary to the Railroad Retirement Board, transmitting, pursuant to law, the annual report of the Board on competition advocacy for fiscal year 1989; to the Committee on Governmental Affairs.

EC-2201. A communication from the Chairman of the Farm Credit Administration, transmitting, pursuant to law, the annual report of the Administration on competition advocacy for fiscal year 1989; to the Committee on Governmental Affairs.

EC-2202. A communication from the Chairman of the Farm Credit Administration, transmitting, pursuant to law, the annual report under the Government in the Sunshine Act for calendar year 1989; to the Committee on Governmental Affairs.

EC-2203. A communication from the Chairman of the United States International Cultural and Trade Center Commission, transmitting, pursuant to law, the annual report on the system of internal accounting and financial management in place during 1989; to the Committee on Governmental Affairs.

EC-2204. A communication from the Chairman of the Barry M. Goldwater Scholarship and Excellence in Education Foundation, transmitting, pursuant to law, the annual report on the system of internal control and financial management in place during 1989; to the Committee on Governmental Affairs.

EC-2205. A communication from the Chairman of the Equal Employment Opportunity Commission, transmitting, pursuant to law, the annual report on the system of internal controls and financial management in place during 1989; to the Committee on Governmental Affairs.

EC-2206. A communication from the Director of the National Science Foundation, transmitting, pursuant to law, the annual report on the system of internal controls and financial management in place during 1989; to the Committee on Governmental Affairs.

EC-2207. A communication from the Chairman of the Board of Governors of the U.S. Postal Service, transmitting, pursuant to law, the annual report under the Government in the Sunshine Act for calendar year 1989; to the Committee on Governmental Affairs.

EC-2208. A communication from the Chief Judge of the U.S. Claims Court, transmitting, pursuant to law, copies of the report of the Hearing Officer and the report of the Review Panel in the case of Edward J. Chapman, Jr., et al. C.R. No. 1-86; to the Committee on the Judiciary.

EC-2209. A communication from the Secretary of Veterans Affairs and the Secretary of Defense, transmitting jointly, pursuant to law, a report on the implementation of the health resources sharing portion of the "Department of Veterans Affairs and the Department of Defense Health Resources Sharing and Emergency Operations Act" for fiscal year 1989; to the Committee on Veterans' Affairs.

INTRODUCTION OF BILLS AND JOINT RESOLUTIONS

The following bills and joint resolutions were introduced, read the first and second time by unanimous consent, and referred as indicated:

By Mr. DOLE (for himself, Mrs. KASSEBAUM, Mr. SIMPSON, Mr. BOSCHWITZ, and Mr. GRASSLEY):

S. 2021. A bill to amend title 11, United States Code, to ensure that the bankruptcy laws are not used to prevent restitution to, or recovery of, failed financial institutions; to the Committee on the Judiciary.

By Mr. HELMS:

S. 2022. A bill to extend the suspension of duty on machines designed for heat-set, stretch texturing of continuous man-made fibers; to the Committee on Finance.

SUBMISSION OF CONCURRENT AND SENATE RESOLUTIONS

The following concurrent resolutions and Senate resolutions were read, and referred (or acted upon), as indicated:

By Mr. GRAHAM (for himself, Mr. THURMOND, Mr. DURENBERGER, Mr. MACK, Mr. SARBANES, Mr. SPECTER, Mr. DODD, Mr. BRYAN, Mr. BAUCUS, Mr. ADAMS, Mr. DECONCINI, Mr. MATSUNAGA, Mr. KENNEDY, Mr. BURDICK, Mr. BENTSEN, Mr. BUMPERS, Mr. HEINZ, Mr. DASCHLE, Mr. BURNS, and Mr. BINGAMAN):

S. Con. Res. 88. Concurrent resolution expressing the sense of the Congress that a postage stamp should be issued in honor of Claude Denson Pepper; to the Committee on Governmental Affairs.

By Mr. MITCHELL (for Mr. SASSER):

S. Con. Res. 89. Concurrent resolution correcting the enrollment of S. 1838; considered and agreed to.

STATEMENTS ON INTRODUCED BILLS AND JOINT RESOLUTIONS

By Mr. DOLE (for himself, Mrs. KASSEBAUM, Mr. SIMPSON, Mr. BOSCHWITZ, and Mr. GRASSLEY):

S. 2021. A bill to amend title 11, United States Code, to ensure that the bankruptcy laws are not used to prevent restitution to, or recovery of, failed financial institutions; to the Committee on the Judiciary.

TAXPAYER RECOVERY ACT

Mr. DOLE. Mr. President, I join today with my distinguished colleagues, Senators KASSEBAUM, SIMPSON, BOSCHWITZ, and GRASSLEY, in introducing the Taxpayer Recovery Act of 1990.

THE PROBLEM

Mr. President, I do not need to tell anyone in this Chamber about how much the thrift bailout will cost the taxpayers of this country. The estimates are staggering—ranging from a low of $50 billion to as much as $150 billion. Some economists have estimated that the price tag will rise even higher as new information becomes available and as market conditions change.

And who will have to foot this bill? The American taxpayer, of course—to the tune of several thousand dollars for each man, woman, and child in this country. One of the main causes behind the collapse of the thrift industry can be summed up in a single word—greed. The greed of dishonest thrift executives. The greed of dishonest attorneys and accountants. The greed of other dishonest thrift "insiders." And unbelievably, the greed continues—even after the thrift insiders have been arrested, convicted, sentenced, and put behind bars.

Take the case of Attorney Larry Vinyard, who is now serving a prison term for defrauding a savings and loan. Vinyard paid $963,000—in cash—for a five-bathroom mansion 4 days after he was convicted. The FDIC is currently unable to attach Vinyard's mansion—even though Vinyard owes the Federal Government—and the taxpayers of this country—millions of dollars in criminal fines.

Or take the case of Jay and Leif Solderling, two brothers who apparently like to go on shopping sprees despite owing $1.5 million in criminal restitution to the Federal Savings and Loan Insurance Corporation.

The two spent more than $500,000 after they were released from prison in 1988—not bad for a pair that claimed that they were so broke that they were unable to pay their court-ordered restitution.

How can this happen? How can the S&L criminals continue to own and enjoy many of the fruits of their illegal actions—despite being responsible for gouging the American taxpayers out of millions and millions of dollars?

Mr. President, the answer is simple: as currently drafted, the Federal Bankruptcy Code contains a number of gaping loopholes that give the S&L criminals safe haven. Taking advantage of these loopholes is—unbelievably—perfectly legal.

THE PROVISIONS OF THE TAXPAYER RECOVERY ACT

The Taxpayer Recovery Act of 1990 attempts to close some of these loopholes through a number of minor—but important—changes to the Federal Bankruptcy Code. Let me briefly explain what these changes are and how they would work:

First, the act provides that a criminal restitution order issued against a person who has criminally defrauded a failed financial institution is not dischargeable under chapter 3 of the Bankruptcy Code.

Although the nondischargeability of criminal restitution orders is the subject of a case now pending before the Supreme Court, Congress must weigh in—and it must weigh in now. Criminal restitution orders—and particularly those restitution orders issued against the S&L crooks—should not be dischargeable in bankruptcy. Period. The taxpayers of this country demand no less.

Second, the act provides that judgments obtained by the FDIC against officers and directors for defrauding their financial institutions will also be nondischargeable in chapter 13 proceedings.

These officers and directors have abused the fiduciary trust of their depositors and shareholders—and should be punished accordingly.

Third, normally, a creditor has approximately 60 days during which to object to the discharge of a particular debt. However, there have been a number of instances of dishonest thrift executives filing for bankruptcy long before the completion of the FDIC's investigation. As a result, the FDIC is often shut out of the objection procedure.

The act corrects this problem by extending the time period during which the FDIC can object to the discharge of certain debts in bankruptcy. Finally, the act restricts the amount of personal assets that a debtor accused of defrauding a failed financial institution act can shield under the so-called homestead exemptions contained in the various State bankruptcy laws. Federal law protects only $7,500 in home equity, but allows States to make the exemption more generous.

Not surprisingly, many of the S&L criminals have taken advantage of these more generous State exemptions—in some instances, using the State exemptions to protect multi-million dollar mansions, expensive motorboats, and even yachts from the reach of the FDIC.

Let me emphasize that the act would not restrict—in any significant way—the availability of these State homestead exemptions. The State exemptions would continue to be available to all law-abiding citizens.

The act would simply apply the less generous Federal homestead exemption to those who have defrauded our Nation's financial institutions—and hence, the American taxpayer.

CONCLUSION

Mr. President, the Taxpayer Recovery Act of 1990 does not call for a major revision of the Federal bankruptcy laws. It is simple and specific legislation with a very simple and specific goal: To stop the S&L crooks from manipulating the Federal and State bankruptcy codes for their own personal, selfish advantage.

Those who have so shamelessly flouted the law in the past should not now reap the benefits that the law provides. And those who have defrauded America's taxpayers to the tune of millions and millions—perhaps even billions—of dollars should not continue to defraud the taxpayers by wrapping themselves around the protective shield of the Federal and State bankruptcy codes.

Mr. President, it's time for justice to be rendered to the American taxpayer. It's time for the S&L criminals to ante up.

Mr. President, I ask unanimous consent that the text of the Taxpayer Recovery Act of 1990 be printed in the RECORD.

There being on objection, the bill was ordered to be printed in the RECORD, as follows:

S. 2021

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled,

SECTION 1. SHORT TITLE.

This Act may be cited as the "Taxpayer Recovery Act of 1990".

SEC. 2. EXCEPTION TO DISCHARGES.

(a) Subsection (a) of section 523 of title 11, United States Code, is amended—

(1) by inserting "1328(a)," immediately before the phrase "or 1328(b)",

(2) by striking out "or" at the end of paragraph (9),

(3) by striking out the period at the end of paragraph (10) and inserting in lieu thereof a semicolon, and

(4) by adding at the end thereof the following new paragraphs:

"(11) for restitution that the debtor has been ordered to pay by any court of the United States, or of any State, in any criminal proceeding arising from any act that caused loss to any bank, savings association, or credit union; or

"(12) for damages provided in any judgment, order, or consent decree entered in any court of the United States, or of any State, or in any settlement agreement entered into by the debtor, arising from any act involving fraud or reckless disregard for

the law committed with respect to any bank, savings association, or credit union.".

(b) Section 523 of title 11, United States Code, is amended by adding at the end thereof the following new subsections:

"(e) Any individual acting as a director, officer, or institution-affiliated party (as defined in section 3(u) of the Federal Deposit Insurance Act (12 U.S.C. 1813(u))) of a bank, savings association, or credit union shall be considered to be acting in a fiduciary capacity with respect to the bank, savings association, or credit union for purposes of subsection (a)(4).

"(f) Notwithstanding subsection (a)(2)(B)(ii) of this section, reliance by a creditor will not be required to establish an exception to discharge if the creditor is a financial regulatory agency that is a successor to a bank, savings association, or credit union.".

(c) Subsection (c) of section 523 of title 11, United States Code, is amended by—

(1) striking out "Except as" and inserting in lieu thereof "(1) Except as", and

(2) adding at the end thereof the following new paragraph:

"(2) Notwithstanding any other provision of law, a complaint objecting to the discharge of any debt owned to—

"(A) a bank, savings association, or credit union that is closed, is in receivership or conservation, or is sold to (or has its assets and liabilities assumed by) another bank, savings association, or credit union in a transaction assisted by a financial regulatory agency, or

"(B) a financial regulatory agency,

may be filed on or before the date that is the later of 120 days after the date of the debtor's first meeting of creditors or 120 days after the date of the appointment of a conservator or receiver by a financial regulatory agency for the bank, savings association, or credit union with respect to which the debt arises.".

(d) Paragraph (2) of section 1328(a) of title 11, United States Code, is amended by striking out "section 523(a)(5)" and inserting in lieu thereof "section 523(a)".

SEC. 3. EXEMPTIONS.

(a) Section 522 of title 11, United States Code, is amended by adding at the end thereof the following new subsection:

"(n) Notwithstanding subsections (b) and (1), or any other provision of State or Federal law, an individual debtor who has committed an act involving fraud or reckless disregard for the law, or is subsequently adjudicated to have committed an act involving fraud or reckless disregard for the law at any time during the pendency of his bankruptcy proceeding, with respect to any bank, savings association, or credit union that is in receivership or conservatorship, is sold (or has its assets and liabilities assumed by) another bank, savings association, or credit union in a transaction assisted by a financial regulatory agency, shall not exempt from property of the estate—

"(1) more than $7,500 in value of the debtor's aggregate interest in any real property that the debtor, or a dependent of the debtor, uses as a residence or in a cooperative that owns property that the debtor, or a dependent of the debtor, uses as a residence, and

"(2) the debtor's interest in any insurance policy or annuity.".

(b) Paragraph (1) of section 522(c) of title 11, United States Code, is amended by striking out "section 523(a)(1) or 523(a)(5)" and inserting in lieu thereof "paragraph (1), (5), (11), or (12) of section 523(a)".

SEC. 4. EFFECTIVE DATE.

The amendments made by this Act shall take effect on the date of enactment of this Act.

Mrs. KASSEBAUM. Mr. President, I am pleased to join Republican Leader DOLE in introducing the Taxpayer Recovery Act. We have all read with disgust how some savings and loan executives drained deposits to finance lavish lifestyles. What is now more appalling is that these same people are still continuing their lavish lifestyles by taking advantage of liberal provisions under the Federal bankruptcy code. Under the bankruptcy code, States may provide homestead exemptions to protect the debtor's home and household goods from creditors. There is a gaping loophole in this exemption because some States allow bankrupt debtors to continue to keep their houses regardless of how palatial they may be.

People convicted of illegally taking money from savings and loans are using their ill-gotten gains to purchase expensive houses so they can avoid having to pay back the money to the Federal deposit insurance fund.

I do not believe that convicted criminals should be able to use the bankruptcy code to maintain million-dollar homes and expensive cars. This money belongs to the American taxpayers who are paying for the savings and loan clean up and we should do everything possible to see that we recover these funds.

● Mr. BOSCHWITZ. Mr. President, many of my constituents in Minnesota are alarmed by the current savings and loan crisis and its implications for taxpayers. As they read about the billions of dollars that will be exacted from honest citizens, they grow increasingly outraged. They are further offended when they observe an unwillingness to assume personal responsibility on the part of those directly at fault. Given the justifiable concern of my constituents, I am pleased today to join my good friend Senator DOLE as a sponsor of the Taxpayer Recovery Act of 1990.

I strongly support vigorous prosecution of individuals guilty of defrauding financial institutions, and contributing to their downfall. Mr. President, I know you agree that those convicted of criminal activity should be jailed and heavily fined. I am proud of what we accomplished through the enactment of the Financial Institutions Reform, Recovery, and Enforcement Act [FIRREA], especially our approval of almost $50 million of additional funding devoted to prosecuting criminal wrongdoing arising from savings and loan failures.

Despite our best efforts, however, criminals found guilty of fraudulent acts are still avoiding full accountability by using the bankruptcy laws to escape payment of restitution. In other words, an individual who has been convicted of defrauding a failed financial institution and has been ordered to make restitution, can file for protection under chapter 13 of the Bankruptcy Code and obtain a discharge of this obligation.

The Taxpayer Recovery Act of 1990 addresses that problem. It ensures that the Bankruptcy Code is not misused by criminals who should be forced to step up and accept responsibility for their roles in financial institution failures.

The bill's intent is as follows:

First, to prevent the discharge of criminal restitution orders under chapter 13 of the Bankruptcy Code;

Second, to prevent the discharge of criminal judgments against the officers/directors of failed thrifts;

Third, to extend the time period during which the FDIC can object to the discharge of debts under the Federal bankruptcy laws; and

Fourth, to restrict the amount of personal assets that a debtor can shield under the homestead exemptions contained in various State bankruptcy laws.

Mr. President, I urge my colleagues to support this legislation. Our constituents rightly demand that we play a role in making sure that perpetrators are held fully accountable for actions which could topple our financial system and ultimately threaten all of us. This legislation provides an important way to obtain some redress from those adjudged to have violated the public trust.●

ADDITIONAL COSPONSORS

S. 276

At the request of Mr. DURENBERGER, the name of the Senator from Virginia [Mr. WARNER] was added as a cosponsor of S. 276, a bill to establish a Department of Environmental Protection.

S. 585

At the request of Mr. LAUTENBERG, the name of the Senator from Colorado [Mr. WIRTH] was added as a cosponsor of S. 585, a bill to implement the national objective of pollution prevention by establishing a source reduction program at the Environmental Protection Agency, by assisting States in providing information and technical assistance regarding source reduction, and for other purposes.

S. 1216

At the request of Mr. SIMON, the names of the Senator from Michigan [Mr. LEVIN], the Senator from New York [Mr. MOYNIHAN], and the Senator from Hawaii [Mr. INOUYE] were added as cosponsors of S. 1216, a bill to amend the National Labor Relations Act to give employers and performers in the live performing arts, rights given by section 8(e) of such act

to employers and employees in similarily situated industries, to give to such employers and performers the same rights given by section 8(f) of such act to employers and employees in the construction industry, and for other purposes.

S. 1310

At the request of Mr. SIMON, the names of the Senator from Pennsylvania [Mr. HEINZ] and the Senator from Massachusetts [Mr. KERRY] were added as cosponsors of S. 1310, a bill to eliminate illiteracy by the year 2000, to strengthen and coordinate literacy programs, and for other purposes.

S. 1393

At the request of Mr. REID, the name of the Senator from Massachusetts [Mr. KERRY] was added as a cosponsor of S. 1393, a bill to direct the Secretary of Defense to give priority to the Federal Bureau of Prisons in transferring any surplus real property or facility that is being closed or realigned.

S. 1430

At the request of Mr. KENNEDY, the name of the Senator from New York [Mr. MOYNIHAN] was added as a cosponsor of S. 1430, a bill to enhance national and community service, and for other purposes.

S. 1436

At the request of Mr. PACKWOOD, the names of the Senator from Montana [Mr. BURNS], the Senator from Utah [Mr. HATCH], the Senator from Alaska [Mr. MURKOWSKI], the Senator from Alaska [Mr. STEVENS], the Senator from Idaho [Mr. SYMMS], and the Senator from Wyoming [Mr. WALLOP] were added as cosponsors of S. 1436, a bill to revise, streamline, and make more efficient the review of land and resource management plans, together with sales and other actions implementing such plans, to clarify the jurisdiction and powers of the courts with regard to review of such plans and actions pursuant thereto, and for other purposes.

S. 1675

At the request of Mr. KENNEDY, the name of the Senator from Michigan [Mr. LEVIN] was added as a cosponsor of S. 1675, a bill to provide financial assistance for teacher recruitment and training, and for other purposes.

S. 1751

At the request of Mr. GORTON, the names of the Senator from Kentucky [Mr. MCCONNELL] and the Senator from California [Mr. WILSON] were added as cosponsors of S. 1751, a bill to prohibit the use of refrigerated motor vehicles for the transportation of solid waste, to prohibit the use of cargo tanks in providing motor vehicle transportation of food and hazardous materials, and for other purposes.

S. 1843

At the request of Mr. BOSCHWITZ, the names of the Senator from Iowa [Mr. GRASSLEY], the Senator from Maine [Mr. COHEN], and the Senator from Mississippi [Mr. LOTT] were added as cosponsors of S. 1843, a bill to amend the Internal Revenue Code of 1986 to provide a nonrefundable credit for the purchase and installation of Mode C equipment for transponders used in aircraft.

S. 1931

At the request of Mr. DANFORTH, the name of the Senator from Michigan [Mr. LEVIN] was added as a consponsor of S. 1931, a bill to prevent the discharge in a chapter 13 bankruptcy proceeding of certain debts arising out of the debtor's operation of a motor vehicle while legally intoxicated.

S. 1951

At the request of Mr. HATFIELD, the names of the Senator from Pennsylvania [Mr. HEINZ] and the Senator from North Dakota [Mr. CONRAD] were added as cosponsors of S. 1951, a bill to promote interagency cooperation in the area of science, mathematics, and technology education.

S. 1978

At the request of Mr. GLENN, the name of the Senator from Hawaii [Mr. INOUYE] was added as a cosponsor of S. 1978, a bill to establish as an executive department of the Government a Department of Industry and Technology, to establish within such Department the Advanced Civilian Technology Agency, to add the Secretary of the Treasury and Industry and Technology and the United States Trade Representative to the National Security Council, and for other purposes.

S. 2006

At the request of Mr. GLENN, the name of the Senator from South Dakota [Mr. PRESSLER] was added as a cosponsor of S. 2006, a bill to establish the Department of the Environment, provide for a global environmental policy of the United States, and for other purposes.

At the request of Mr. WARNER, his name was added as a cosponsor of the bill S. 2006, supra.

S. 2017

At the request of Mr. DOLE, the name of the Senator from Arizona [Mr. MCCAIN] was added as a cosponsor of S. 2017, a bill to provide a permanent endowment for the Eisenhower Exchange Fellowship Program.

SENATE JOINT RESOLUTION 223

At the request of Mr. GARN, the names of the Senator from Illinois [Mr. DIXON], the Senator from Connecticut [Mr. DODD], the Senator from New York [Mr. MOYNIHAN], the Senator from Georgia [Mr. NUNN], and the Senator from Michigan [Mr. RIEGLE] were added as cosponsors of Senate Joint Resolution 223, a joint resolution to authorize and request the President to issue a proclamation designating May 1990 as "Neurofibromatosis Awareness Month."

SENATE JOINT RESOLUTION 228

At the request of Mr. FORD, the name of the Senator from Georgia [Mr. NUNN] was added as a cosponsor of Senate Joint Resolution 228, a joint resolution to designate May 1, 1990, through May 31, 1990, as "Worldwide Bluegrass Music Month."

SENATE JOINT RESOLUTION 229

At the request of Mr. CRANSTON, the names of the Senator from Alabama [Mr. HEFLIN], the Senator from Colorado [Mr. WIRTH], the Senator from Idaho [Mr. MCCLURE], and the Senator from Illinois [Mr. SIMON] were added as cosponsors of Senate Joint Resolution 229, a joint resolution to designate April 1990 as "National Prevent-A-Litter Month."

SENATE CONCURRENT RESOLUTION 88—RELATING TO THE ISSUANCE OF A CLAUDE DENSON PEPPER STAMP

Mr. GRAHAM (for himself, Mr. THURMOND, Mr. DURENBERGER, Mr. MACK, Mr. SARBANES, Mr. SPECTER, Mr. DODD, Mr. BRYAN, Mr. BAUCUS, Mr. ADAMS, Mr. DECONCINI, Mr. MATSUNAGA, Mr. KENNEDY, Mr. BURDICK, Mr. BENTSEN, Mr. BUMPERS, Mr. HEINZ, Mr. DASCHLE, Mr. BURNS, and Mr. BINGAMAN) submitted the following concurrent resolution; which was referred to the Committee on Governmental Affairs:

S. CON. RES. 88

Whereas Claude Denson Pepper served the Nation for 14 years in the Senate and 26 years in the House of Representatives with great distinction and dedication;

Whereas Claude Pepper championed the cause of social justice and fought against discrimination of all types, including his brave stand in the 1940's against the poll tax;

Whereas Claude Pepper fought for the underdog by supporting causes that needed sponsors and speaking up for those whose voices could not be heard in the political arena;

Whereas Claude Pepper continued undaunted in the face of political attack, precarious health, and changing times to devote himself to serving the residents of the 18th Congressional District of Florida and the many friends and supporters he had across the Nation who relied on his leadership;

Whereas Claude Pepper, regardless of political trends, always strove to fight for the needs of the poor, the sick, and the elderly;

Whereas Claude Pepper worked tirelessly for adequate health care for all Americans and sponsored legislation that led to the participation of the United States in the World Health Organization and established 5 of the National Institutes of Health;

Whereas Claude Pepper was the leading advocate for the elderly, and brought national attention to their needs;

Whereas Claude Pepper was a staunch supporter of Social Security and played a

major role in restoring the system to a sound financial footing; and

Whereas the lives of countless Americans have been immeasurably enriched by the career of Claude Pepper: Now, therefore, be it

Resolved by the Senate (the House of Representatives concurring), That it is the sense of Congress that the Citizens' Stamp Advisory Committee of the United States Postal Service should recommend to the Postmaster General that a postage stamp honoring Claude Pepper should be issued, notwithstanding the requirement of the Committee that an individual must be deceased for at least 10 years before the Committee will make a recommendation that a stamp honoring a deceased person should be issued.

Mr. GRAHAM. Mr. President, I rise today to submit a concurrent resolution to call upon the Citizen's Stamp Advisory Board to issue a stamp in honor of our former colleague, Senator Claude Pepper of Florida.

Senator Pepper was a family friend, as well as an inspiration and mentor. Throughout his distinguished career, representing Florida in this Chamber and in the House of Representatives, Senator Pepper was a champion for justice. Regardless of the political climate, he fought tirelessly for civil rights, for help for the poor and the sick, and for dignity for our older citizens.

As a servant to the public, he utilized his unique combination of courage and vision to aid those most needy of assistance, and millions have benefited from his efforts. Senator Pepper's service to America provides a goal to which all who serve in Congress should aspire.

By issuing a stamp to honor our departed friend, we will express our gratitude to Senator Pepper for all he has given to the people of our Nation. America will miss this champion, but we will honor his memory by renewing our dedication to his ideals of justice and human dignity.

Representative MOODY has introduced this legislation in the House of Representatives, where it already has 275 cosponsors. I strongly urge my colleagues to lend their support to the Senate version of this legislation.

SENATE CONCURRENT RESOLUTION 89—CORRECTING THE ENROLLMENT OF S. 1838

Mr. MITCHELL (for Mr. SASSER) submitted the following concurrent resolution; which was considered and agreed to:

S. CON. RES. 89

Resolved by the Senate (the House of Representatives concurring), That in the enrollment of the bill (S. 1838), to establish or modify, research, promotion, and consumer education programs for certain agricultural commodities, and for other purposes, the Secretary of the Senate is hereby authorized and directed, in the enrollment of the said bill, to make the following correction, namely, in section 405(g)(5) after "any producer" insert: "operating mushroom production facilities,".

NOTICES OF HEARINGS

COMMITTEE ON SMALL BUSINESS

Mr. BUMPERS. Mr. President, I would like to announce that the Small Business Committee will hold a full committee hearing on Thursday, February 22, 1990, to examine technology transfer and small business. The hearing will be held in room 428A of the Russell Senate Office Building and will commence at 9:30 a.m. For further information, please call Joan Bready at 224-2016 or Scott Varady at 224-3052.

SUBCOMMITTEE ON AGRICULTURE AND STABILIZATION OF PRICES

Mr. LEAHY. Mr. President, I wish to announce that the Subcommittee on Agricultural Production and Stabilization of Prices of the Senate Committee on Agriculture, Nutrition, and Forestry will hold a hearing in preparation for the 1990 farm bill regarding soybeans. The hearing will be held on Thursday, February 1, 1990, at 9:30 a.m. in room 332 Russell Senate Office Building.

Sentor DAVID PRYOR will preside. For further information, please contact Miles Goggins at 224-6241.

AUTHORITY FOR COMMITTEES TO MEET

COMMITTEE ON ARMED SERVICES

Mr. PRYOR. Mr. President, I ask unanimous consent that the Committee on Armed Services be authorized to meet in open session on Wednesday, January 24, 1990, at 9 a.m. to receive testimony on the changes in the Soviet threat.

The PRESIDING OFFICER. Without objection, it is so ordered.

COMMITTEE ON ENERGY AND NATURAL RESOURCES

Mr. PRYOR. Mr. President, I ask unanimous consent that the full committee of the Committee on Energy and Natural Resources be authorized to meet during the session of the Senate, January 24, 1990, 9:30 a.m., for a hearing to receive testimony on the energy policy implications of S. 1630, legislation amending the Clean Air Act, as ordered reported by the Senate Committee on Environment and Public Works.

The PRESIDING OFFICER. Without objection, it is so ordered.

ADDITIONAL STATEMENTS

SHEPARD LEE, PORTLAND, ME

● MR. COHEN. Mr. President, I would like to take this opportunity to call the attention of my colleagues to an interview from the Portland Press Herald with one of my constituents, Mr. Shepard Lee of Portland.

Shep is the chairman of the board of the Lee Group, a holding company involved principally with automobile dealerships. He started as a saleman for his father's car dealership and advanced through the ranks until he eventually took over the business. He has gone on to become an outstanding businessman and has made great contributions to the business community of Maine.

In addition to this work, Shep has also gone throughout the world lecturing on American business. He was one of four Americans to take part in the 1988 Brandeis University Institute of Enterpreneurship lecture in China. His knowledge of the industry is currently being tapped by French auto dealers in their preparations for the expansion of trade within the European Common Market in 1992.

I would like to commend Shep for all that he has done, and is continuing to do, in the automobile dealer industry. And I would like to have his interview included in the CONGRESSIONAL RECORD.

The article follows:

SHEPARD LEE, CHAIRMAN, THE LEE GROUP

Shepard Lee began selling DeSotos in Auburn with his father in 1947, when, he says, "everybody in Androscoggin County thought DeSoto was the guy who discovered the Mississippi River and didn't realize it was an automobile." In its first year, his father's business employed four people and sold 97 DeSotos.

Last year was not a good year for either new or used car sales, he says, but in a "good year" Lee's dealerships in Westbrook and Auburn sell close to 7,000 new cars and about 4,000 used.

In addition to serving as chairman of the board of The Lee Group, Lee has lectured abroad about American business. In 1988, he was among four American business people who lectured in China as part of Brandeis University's Institute of Enterpreneurship. He now is consulting with European dealers. Recently, he has been working with a French bank, Credit General Industrial, and Prexo, a French consulting firm, assisting French auto dealers as they prepare for 1992, when trade barriers among European countries are lowered.

Lee discussed his work with foreign dealers, the "megadealer" trend toward multifranchise dealership and the current downturn in the U.S. auto Industry with staff writer Alberta Cook.

Q: How were you chosen to consult with the French automobile dealers?

A: I think they knew I had given some speeches about megadealers and had been involved in National Automobile Dealers Association workshops.

The French dealers see the megadealer movement growing in Europe. I went over there for a week, and I met with the bankers and some dealers and got some idea of what the market was like over there. They have been coming over yearly—this is the second year of the program—and they go for a week to Harvard Business School. They're coming to Phoenix in September,

and I'm going to Barcelona in April, then I'm going to Brussels.

The objective is for these dealers really to learn how to be megadealers—how to acquire more dealerships, how to get whatever economies of scale you can get from owning several dealerships.

Q: Tell me about your work with them.

A: They see both an opportunity and a threat in the European Common Market in 1992 when all the (trade) barriers presumably will be down. That means the German dealers, the Belgian dealers, the Spanish dealers can all sell to France. And the French dealers can sell somewhere else.

I think the ultimate objective is to eliminate all tariffs. They certainly see one market—tariff-free—as the end result. They see an opportunity to sell in adjacent countries and they also see a lot more competition coming from these other countries.

They see the megadealer movement growing in Europe. The objective is for these dealers to learn how to acquire more dealerships, how to get whatever economies of scale you can get from owning several dealerships.

The feeling is that if it happened here, the same thing is going to happen there. Because the European Common Market will be—I think—a bigger market than the United States if all the barriers are down. So they're looking for insights about how to operate a group of dealerships. And they wanted to (meet with) someone who had started small, as we did, and had grown. They pay me very well on a per day basis and pay all of my expenses.

Now, I have my hands full and I regard this (my business) as the major challenge, and I'm not looking to be a career consultant. But it's fun to do. It's been a great experience.

Q: What kinds of advice do they ask?

A: They ask me to take them through a typical day of how you operate a sales department, or how you organize your computer operation, or how you do your service. They are becoming very quality-oriented. We have, for instance, a group of telephone operators—we call every service customer every day. If you were in for service yesterday, the goal is to call today and see if you're satisfied. If you're not, we have a service manager call you back and try and rectify the problem.

The French dealers are very interested in all of that. There's a greater focus on what we call CSI—customer satisfaction index—and the factories are very interested in that now. They want to know what American megadealers are doing that has enabled them to grow.

Q: How is the car business doing in Europe?

A: Business in Europe is better than in the United States. They're not having a recession. They're in a growth mode. They are in the same kind of situation we were in three years ago.

Q: How do your sales now compare with the way they were a year ago?

A: They are way off. It varies with the franchise to some extent. The car manufacturers have laid off, closed plants. Every dealer I know carrying any make of car is having a much harder time now than they were a year ago.

Q: Are your imports selling better than American cars?

A: I can't say that there's been anything consistent. Hondas have been a consistently good seller. Both imports and American car (sales) are off.

We've been lucky because we've had a balance of imports and domestics. Automobiles are usually cyclical. You have three or four good years and you have a couple of bad ones. What's happening now is not only a severe downturn, because of the restructuring that's going on and the diminution of the number of dealerships.

Because we had about five or six good years, many dealers paid what we call "blue sky"—an overage—for dealerships. And a lot of them incurred heavy bank debt. All of a sudden business slowed way down. So not only was the volume of new car sales off, but the gross margins that you made on the cars were way down. And the banks had a field day financing almost anybody in the last five or six years.

Now if you do a survey of a lot of typical car owners, many of them owe more on the car than they're worth. So they don't have equity.

I think dealers thought it was going to go on forever. Dealers are retrenching. They're combining facilities, management staffs, doing everything a prudent business person would do when business slows way down. We've combined jobs, and we've moved the Dodge facility to this location (Westbrook). What we haven't done is cut anybody's wages. We've tried to reduce by attrition more than any other way.

But we're in a little different situation than others. We've always kept the earnings in the business. We've been through downturns several times before. I've always grown during bad times. We're doing what we need to do to get through the tough period, and we're sure there will be dealerships who want to sell or who go broke. Our hope is to buy some of those dealerships and fill up this 14-acre piece of land.

THE LEE FILE

Residence: Portland.

Age: 63.

Education: Bowdoin College, 1947.

Career: Began as a salesman for Advance Auto Sales in Auburn, a DeSoto and Plymouth dealership founded by his father and a Portland business partner in 1936, worked in every department of the business, taking over in 1963; currently is principal shareholder in The Lee Group, the holding company that owns six automobile franchises, a leasing company, management company, real estate company and a wholesale auto parts business. Auto dealerships include Lee Dodge and Lee Hyundai in Westbrook and Lee Honda, Lee Nissan, Lee Giant Advance Chrysler Plymouth Dodge and Lee Oldsmobile Cadillac GMC Truck franchises in Auburn.

Hobbies: Politics, tennis, opera, theater.

Q: So you think there will be some dealers going bankrupt this year?

A: The J.D. Power organization—the preeminent consumer research group in the automobile industry—predicted that 15 percent of the dealers (nationwide) would go out of business before the end of the year. The National Automobile Dealers Association predicted 10 percent. When I say "go out of business," (I mean) they'll give up. Some will go bankrupt. Some will just give up.

Q: In the Portland area?

A: I can't predict (about) the Portland area. It will be unusual if the Portland area is exempt. It's happening all over the country. I can't give you a good reason why it won't happen here. It will surprise me if a year from now, if every dealer who's in business now still has the same (business).

Q: Is this a good time to get a bargain on a car?

A: Anybody who wants a new car can walk into almost any dealership and almost write his own ticket. Because dealers have a lot of inventory and it isn't selling. And they're paying interest to the bank on this inventory. We carry $15 million in vehicles all the time. This is a terrific time to get a good buy on a car because business is so poor. You figure if a car cost us $12,000-$13,000, it costs us easily $140 a month just to pay the interest on that one car to the bank.●

GREG LEMOND, SPORTS ILLUSTRATED 1989 SPORTSMAN OF THE YEAR

● Mr. DURENBERGER. Mr. President, each year Sports Illustrated magazine honors one athlete to be its Sportsman of the Year. In 1989, the honor was given to Greg LeMond of Wayzata, MN.

Greg LeMond has shown the world that comebacks are possible. After becoming the first non-European ever to win the Tour de France Bicycle Road Championship in 1986, a tragic hunting accident nearly cost Greg his life. With 30 shotgun pellets remaining in his body, including two in the lining of his heart, Greg began the long road to recovery. Many setbacks, including an appendectomy 4 months after the shooting, blocked his road to recovery over the next 2 years.

After 2 years of recovery and promising finishes in several preliminary bicycle races, Greg was ready to tackle the Tour de France again. The rest is bicycle racing history. Greg LeMond is the only non-European to win the Tour de France, and he has won it twice. Greg LeMond, 1989 Sports Illustrated Sportsman of the Year, has shown the world that nothing is impossible. The complete story of Greg LeMond's struggle back to the top of the bicycle racing world is documented very well in the December 25, 1989, issue of Sports Illustrated. I wish to bring Greg LeMond's accomplishments to the Senate's attention and hereby request that this article be printed in the RECORD at this time.

The article follows:

GREG LEMOND, 1989 SPORTSMAN OF THE YEAR

(By E.M. Swift)

It was a ride every bit as shocking to cycling enthusiasts as Bob Beamon's long jump in Mexico City was to track fans—a performance the experts believed simply could not be done. Not with the Tour de France on the line. Not by a mere mortal, made of flesh and blood and sinew. Certainly not by 28-year-old Greg LeMond, whose body is all those things plus approximately 30 small lead pellets.

The distance of the final time trial, from Versailles to Paris (24.5 kilometers), was too short, the experts said; the course (slightly downhill) was too easy; the time to make up (50 seconds) was too great. And Laurent Fignon, the two-time Tour winner who was the overall leader going into the final stage, was arrogant, too contemptuously Gallic to

be whipped on his home turf by an American in the bicentennial year of the French Revolution. "Greg believes he can win," Fignon had said on the eve of the final stage. "But it is impossible. I am too strong in the mind and the legs. Fifty seconds is too much to make up in such a short distance."

Fifty seconds should have been too much of a margin for LeMond to overcome. On a normal day the best LeMond could hope for, it was said, was to gain one second a kilometer on Fignon—24.5 seconds in all—less than half the time he needed to make up to win. Not even LeMond's most optimistic supporters—not even his wife, Kathy, who thinks he hung the moon—believed he could erase Fignon's lead. Kathy didn't allow herself to hope for such a miracle. She would be happy with second. That, to her, would be miracle enough.

Because by being in a position to challenge again for the famous yellow jersey—le maillot jaune—in cycling's greatest race, LeMond had silenced all those who had doubted him over the past 27 months. He had proved wrong all the ones who said: You can't; you won't; you haven't the strength or the desire. He had even vanquished the worst enemy of all, that voice in the back of his head that had tried, in the darkest moments, to convince him to give up the chase and move on to other things.

So, you see, in many ways LeMond's race had already been won. Which is what he was thinking when he went to bed on July 22, the night before that final, spectacular ride. Fignon and the 50 seconds were a last golden apple to be reached for after the bushel basket was full. The important matter had been settled. LeMond no longer doubted himself.

What a feeling that was, to know that he could listen to his instincts and feel the rhythms of his body and trust what they told him. To hear "You can do it" and be able to believe.

It had always been that way for LeMond, ever since he first started competitive cycling at age 14 in the hills around Reno. He had ascended in his sport at a dizzying pace, turning pro at 19, joining a top French team and establishing himself among the European elite of cycling at a time when the U.S. was decidedly a Third World country in that sport. In 1983 LeMond became the first American to win the professional road race at the world championships, the most prestigious one-day event in the sport. In 1984 LeMond became the second American ever to attempt the Tour de France, and he finished third. (That year the race was won by Fignon.) In 1985 he finished second in the Tour to the legendary five-time winner, Bernard Hinault, who was LeMond's teammate and rival. Then, in 1986, LeMond became the first non-European ever to win the Tour, beating Hinault and becoming No. 1 in his sport at the relatively tender age of 25. With his prime competitive years still ahead of him, Greg LeMond was at the top of the heap.

A few months later, all that changed. In April 1987, LeMond went turkey hunting with his uncle and his brother-in-law, Patrick Blades, on a ranch in Lincoln, Calif. The three split up and lost track of one another. LeMond was just getting settled behind a bush when a shotgun blast—his brother-in-law's—went off so close by that at first he thought his own gun had accidentally discharged. LeMond started to straighten up, to ask, "Who shot . . . ?" when he felt the blow of approximately 60 No. 2-sized pellets in his back and side. He discovered he could barely breathe—his right lung had collapsed. His kidney and liver were hit. So were his diaphragm and intestine. Two pellets lodged in the lining of his heart. As LeMond lay in the field, awaiting the helicopter that would ultimately save his life, he thought he was going to die. He even had an idea how it would feel: no violent death throes, no excruciating pain. He would just pass out from the loss of blood and die, like going to sleep. He was too shot up to worry about whether he would ride a bicycle again. His concerns were more basic: Will I live to see my wife and kids?

He learned about pain. A tube to draw blood out of his collapsed lung had to be inserted into his chest without anesthesia, and it remained there for a week. "I never thought I'd be the type that needed painkillers," LeMond says. "You think you're used to pain on your bike, but that's not pain. The suffering you feel on your bike is nothing compared to real pain. I think of that sometimes when I ride."

Thirty shotgun pellets remain in LeMond, including the two in the lining of his heart, but miraculously, none of the damage was irreparable. Eight weeks later he started the long road back.

At the time of the accident LeMond weighed 151 pounds, with a body-fat content of 4%. When he started training again, he weighed 137, with 17% body fat. His body, in its efforts to survive, had consumed vast amounts of its muscle. LeMond began to understand how weak he really was when he went riding with a 250-pound man one day, and the man left him behind on a climb.

The next two years were lost ones, professionally. Every time he started to show signs of progress, something would set him back. He had an emergency appendectomy four months after the shooting accident, ending his 1987 season. In July 1988 his comeback was further delayed by surgery to repair an infected tendon in his right shin, forcing him to miss the Tour de France for a second straight year. The powerful Dutch team, PDM, with which LeMond had signed a two-year deal in 1987, wanted to cut his 1989 salary by $200,000. "They had lost total confidence in me," he says. "They were trying to claim that maybe my liver was bad, my lung was shot up, maybe I had lead poisoning. That's why I wasn't riding well. They said, 'Maybe you're not going to ever come back.' "

When he reasoned it out, LeMond knew that he had to be patient. His body had to go through a series of plateaus, every one requiring a period of adaptation. To reach each new plateau, LeMond had to stretch his endurance. Then he had to allow his body time to recuperate before stretching again to reach a higher level. "No matter how dedicated you are, how seriously you train, you need a certain period of time to do that," he says. "It's impossible to go straight there."

When he didn't reason it out, however—and what athlete is a perpetual slave to reason?—when he listened to his disgruntled employers and read what the skeptics were saying, at home and abroad, he kept hearing one phrase in his head: Maybe you're not going to ever come back.

Before the start of the 1989 season, LeMond took a pay cut and signed with ADR, a Belgain-based truck-leasing company, for $350,000 plus bonuses. ADR has a lower budget and considerably lower expectations than powerhouse PDM. That translated to less pressure on LeMond, but it also meant he had a weaker team working for him. Teammates who help to break the wind and chase down opponents are an integral part of professional cycling.

After riding well in the spring classics in Europe, LeMond returned to the U.S. in May and fared poorly in the inaugural Tour de Trump—a race he had designs on winning. He struggled from the start and finished 27th, leading even his most ardent American supporters to question whether he could ever regain his former level. "I was just not capable of staying with anybody on the hills," LeMond says. "I suffered unbelievably."

Before the shooting accident LeMond was one of the most daunting cyclists in the mountains, a climber who thrived on the steepest grades. Now he was the one being dropped. "The hardest part about coming back from an injury is you always remember yourself at your best," he says. "Never the way you were when things were going badly. I kept remembering how I rode in the '86 Tour de France, when I floated up hills or when I could ride 30 miles per hour for an hour and a half during the time trials."

LeMond had his blood tested near the end of the Tour de Trump to see if that might yield some clue to his disappointing performances. It revealed nothing. He returned to Europe to prepare for the Tour of Italy, one of cycling's most prestigious events after the Tour de France. There, too, he faltered. In the first mountain stage LeMond lost eight minutes to the leaders. His masseur, Otto Jacome, who has been a friend of the LeMond family since Greg was 15, took one look at him afterward and said, "You are white. You need iron."

Again LeMond had his blood tested. This time he was diagnosed as anemic, and his doctor immediately gave him an injection of iron. "I was riding myself into the ground," LeMond says. "I was pushing so hard that I was eating into my muscles."

The worst was still to come. In the 11th stage of the Tour of Italy, during a climb called the TreCime di Laverado, LeMond finished 17 minutes behind the leaders. If it hadn't been for the Italian spectators urging him on, he figures he would have finished 25 to 30 minutes down. Riders he had once dominated were pedaling away from him with bewildering ease. How did they do it? he wondered. He was more impressed than angry, feeling for the first time in his career that he was out of his league.

"I came back to the room and was ready to cry," he recalls. "I called Kathy that night and told her, 'Get ready to sell everything. I want no obligations. If things don't turn around, I'm quitting at the end of the year.' " She didn't try to talk him out of it. It was the lowest point in his cycling career.

Shortly after that phone call, things began to turn. LeMond had a second injection of iron and started feeling stronger. He actually stayed within shouting distance of the leaders on a late mountain stage of the Tour of Italy, which was such a morale booster that he wanted an all-out test. Being hopelessly out of contention in the overall standings, LeMond decided to go for broke in the final stage of the Tour of Italy, and individual time trial of just under 34 miles. He would hold nothing back, start to finish. If he ran out of gas—"blew up," in cycling parlance—so be it. But LeMond didn't blow up. He finished second, a whopping minute and 18 seconds ahead of Fignon, the overall winner. "It changed my

entire outlook," says LeMond. "Obviously, there was nothing wrong with me physically."

So he came to the Tour de France quietly hopeful. His goals for the 23-day, 2,025-mile race were relatively modest: He wanted to finish in the top 20 in the overall standings and to win one of the 21 stages. LeMond's name was never mentioned among the pre-race favorites, whose numbers included Pedro Delgado of Spain (the defending champion), Stephen Rooks of the Netherlands, Stephen Roche of Ireland, Andy Hampsten of the U.S. and Fignon. LeMond, having watched the race on television the past two years, was just happy to be there.

But the Tour de France is an event unlike any other, and LeMond felt invigorated in a way he had not been since his accident. The carnival-like caravan that precedes the cyclists along the route, the throngs of people lining the roads, the hordes of international journalists, the daily live television coverage, the tension among the athletes—all of these elements contribute to the supercharged atmosphere of the race. Twenty-four hours a day for more than three weeks the Tour is the center of the universe for all those involved. Sleep comes in snatches. Bags are never unpacked. There is no escaping the mounting pressure, the crowds, the physical and mental exhaustion that gradually wears down all but the strongest riders.

LeMond soaked it all in. This was the turf. He had never finished worse than third in the Tour, and the last time he had competed he won. He felt, in a funny way, as if he were defending his title. In the July 1 Prologue—a 4.8-mile sprint against the clock through Luxembourg that opened the 76th Tour—LeMond's morale got a further boost when he finished fourth among the 198 starters, tied with Fignon and six seconds behind the leader, Erik Breukink of the Netherlands. In a stunning development, Delgado came to the starting line two minutes and 40 seconds late and finished the Prologue dead last, 2:54 behind the leader. LeMond began to adjust his sights upward. "I said to myself if I could finish in the top five in the Prologue, I could finish in the top five overall."

LeMond's strategy was to use the first eight stages, which were relatively flat, to refine his conditioning before the Tour headed into the mountains. He figured to lose some time in the second stage of the race, the team time trial through Luxembourg, and he did. LeMond's ADR team finished the 28.5-mile course 51 seconds behind Fignon's winning Super U team. Still, LeMond was pleased. ADR was fifth of 22 teams, five places better than he thought it would finish. Delgado, meanwhile, suffering stomach cramps, fell more than seven minutes behind Fignon, six behind LeMond, before the Tour was 72 hours old.

The race headed into Belgium for stages 3 and 4. LeMond knew it was in these long, flat early stages—one, 149.4 miles, the other, 158.1—that the Tour could be lost but not won. The field was still full of vigor and high hopes. Inches separated the cyclists as they sped through the countryside, and because the true contenders had yet to be determined, nobody was willing to give space. Outside the Belgian city of Liège, the route narrowed from a nice paved road to a cobblestone lane about six feet wide. It was important to be near the front of the peloton at that point, to avoid being devoured by the terrible crashes that sometimes consumed 30 or 40 riders. As the field jockeyed for position, the pace of the peloton picked up. The cyclists, riding along at a 25-mph clip, increased their speed to 30 mph as they neared the cobblestone section, then to 35, then to 40 mph, full racing speed. Britain's Sean Yates, riding beside LeMond, touched the wheel of the bike ahead of him and went down hard, bringing a handful of riders down with him. One Swiss rider, Mauro Gianetti, broke his nose in a crash and lost 11 minutes to the leaders. LeMond considered it a fine omen that he got away in one piece.

His first major test came during the fifth stage, a 45-mile individual time trial through rainy, windswept Brittany, from Dinard to Rennes. The French call these trials "the races of truth." Tactics and teammates are meaningless. The cyclists, individually spaced at one-to-two-minute intervals, simply go all out against the clock. The best man almost invariably wins. LeMond, when he is right, is the best time trialist in the world. In this race, however, he also ahd a technological ally—tri-bars—which were developed by an American cyclist named Boone Lennon. Widely used by triathletes, these clip-on U-shaped handlebars stick out over the front wheel of the bike, putting the cyclist into an aerodynamically streamlined position similar to a skier's tuck. LeMond had first considered using tri-bars at the Tour de Trump, in which a number of riders experimented with them with success. But he never even took a practice ride with them until the day before the Dinard-to-Rennes time trial, because if the tri-bars worked, LeMond knew, everyone would be using them before long and his edge would be lost. He found they not only put him in a better aerodynamic position but allowed him to rest on his bike, relaxing his upper body and enabling him to push a bigger gear.

LeMond rode like the LeMond of old that day, catching five of the riders who had started ahead of him, including the Netherlands' Breukink, winner of the Prologue. He covered the rainswept course, into a headwind, in 1:38:12, which works out to an average speed of about 28 mph. LeMond beat Delgado by 24 seconds, Fignon by 56 seconds and the fourth-place finisher, France's Thierry Marie, by an impressive one minute, 51 seconds. It was not so staggering a margin that everyone ran out and got themselves a new set of handlebars, but LeMond knew he could do even better. Early in the race he had hit a bump, the impact of which pushed his tribars down so that his body position changed. He felt too stretched out as he pedaled.

That time trial was LeMond's first win since his hunting accident, and the margin of his victory propelled him into first place in the overall standings, five seconds ahead of Fignon. Clutching the yellow jersey, LeMond called the moment his greatest day in cycling, more thrilling even than the day he won the Tour in '86. He had expected to win then. This, he had only dreamed of. And deep inside he began thinking, for the very first time, that if he could win that time trial, he might just be able to win the whole darn thing." "Although," he says, "the mountains were still to come, and I hadn't raced well in the mountains in three years."

LeMond was so excited that he began to take a sleeping pill every night just to get some rest. With the yellow jersey came responsibilities that LeMond knew could sap his strength. Other riders look to the wearer of the yellow jersey to control the Tour. He had to stay near the front of the peloton, ready to follow every break and chase down every attack. At the end of each stage there was the crush of autograph seekers and always the interviewers posing the same questions: How do you feel? Who else looks strong? How long can you keep it?

"There's a lot of wasted energy when you take the yellow jersey," LeMond says. "But I wanted to wear it as long as I could, whether it was one, two or three days, because at that point I had no idea how I would perform when the mountains showed up."

It is the mountain stages that make the Tour de France one of the most grueling physical challenges in sport. Impossible climbs up narrow switchbacks are followed by terrifying descents at speeds approaching 70 mph. Hundreds of thousands of spectators make annual pilgrimages to the steepest climbs, the ones that are rated "beyond category," to watch the world's greatest cyclists laboring past, standing on their pedals, moving barely faster than a man can walk. It is in these mountains—first the Pyrenees, then the Alps—that the race is usually won, and it was in these mountains that most observers expected LeMond to falter.

He surprised even himself when he didn't. In the first stage in the Pyrenees, from Pau to Cauterets, a 91-mile trek that included four major climbs, LeMond stayed with Fignon the entire way to hang on to the yellow jersey for the fourth straight day. It was another psychological benchmark, and at two o'clock in the morning he called Kathy, who was staying in the house in Kortrjik, Belgium. (The LeMonds also have a house in Wayzata, Minn., which is where they live in the winter.) "You awake honey?" he asked.

"Yes," she answered. "What are you doing awake?"

He was too excited to sleep, he told her. He was back. How far back—80 percent? 90 percent? All the way?—remained to be seen. But they both knew that by staying with Fignon in the mountains, he had already cleared a hurdle that only three weeks earlier had seemed impossible. And now, as Kathy remembers, "We began to get greedy and actually think about the possibility of Greg winning the Tour. So I stopped sleeping at night, too."

The weakness of LeMond's team began to take its toll, however, in the 10th stage, from Cauterets to Luchon-Superbagnères, the second and last day in the Pyrenees. LeMond noticed Fignon struggling early on. At one point both he and Hampsten saw Fignon grab on to a photographer's motorcycle for a second or two during a climb, an act that technically could have disqualified the Frenchman. "He was hurting, and if I'd had teammates with me," says LeMond, "we could have set a really hard pace and tried to drop Fignon on that climb and the next climb and the next one. It could have cost him minutes."

But LeMond was, essentially, riding without help, so he bided his time while Fignon rode through his early troubles. Meanwhile, Delgado—still 6:24 behind in the overall standings—broke away from the leaders. No one responded. "Everyone was looking at me as if to say, It's your job to chase him down, Greg, you've got the yellow jersey," recalls LeMond. "But I had no choice but to play it cautious and calm, as if Delgado didn't matter. The ideal thing for Fignon would have been for me to lead the chase and tire myself out, then to attack me on the final climb."

Fignon, recovering from his early problems, did attack on the final climb, an 11.2-mile monster up to Superbagnères that took 45 minutes for the leaders to complete. LeMond hung with him most of the way. Then, less than a mile from the summit, Fignon attacked again. LeMond responded too quickly. "It was a big mistake on my part, a tactical error,' he says. "I should have kept my pace and recovered the ground slowly. Instead I caught right up to him then all of a sudden I blew up, boom. I put my body into oxygen debt."

In the last half mile Fignon gained 12 seconds on LeMond to take over the yellow jersey, but the big winner of the day was Delgado, who made up 3½ minutes to catapult himself into fourth place overall, only 2:53 behind Fignon.

It was the first time Fignon had worn the yellow jersey since his winning years of 1983 and '84. He, like LeMond, had had his share of injuries in the interim. Surgery on his left Achilles tendon had put him off his form for four years. Now that he was back on top, Fignon wasted little time alienating friend and foe. "Success goes straight to his head," says LeMond. "He can change from a very humble guy to a very arrogant guy overnight."

LeMond, whose return to form in the race had been the talk of French cycling fans, was Fignon's first target. Fignon accused the underdog LeMond, through the press, of not defending the yellow jersey like a champion, of being content to ride on his—Fignon's—wheel, allowing Delgado to race away from the pack.

LeMond confronted Fignon the next day. "Don't talk to me about not racing like a champion," he told Fignon. "I saw you hang on to that motorcycle, and if you consider that racing like a champion, I'd be happy to tell people about it."

Before the Tour was over, a television crew would videotape Fignon spitting into the lens of its camera in response to a request for an interview. Fignon consistently declined to smile for pictures, insisting on one occasion that he was just as cute when frowning. And, memorably, when Fignon refused to accommodate photographers for even five minutes during a rest day in the Alps, he provoked French journalists into organizing a nationwide Fignon boycott. No photographs were published of the dour and temperamental race leader in any French paper for the next 48 hours.

A genuine rivalry was developing between the boyish, optimistic LeMond and the arrogant Fignon, with many Frenchmen allied with LeMond. And privately, LeMond believed it was to his advantage that Fignon had the yellow jersey during the second week of the race. It would be Fignon who would be expected to control each day's stage, chasing down attackers, and Fignon who would be hounded for interviews. LeMond, just seven seconds back, felt the pressure ease. "It was like a load off my shoulders," he says.

The next three stages resulted in few changes in the overall standings, though the 100°-plus temperatures and the breakneck pace began to wear down the pack. Four of LeMond's ADR teammates had already dropped out—in all, 60 of the original 198 riders failed to make it to Paris—but he was not without allies. Vincent Barteau, one of Fignon's teammates, happens to be among LeMond's closest friends in cycling. LeMond had convinced the PDM team to sign Barteau for the 1988 season and had, essentially, kept him from quitting the sport. Their friendship paid dividends: During the race, whenever Fignon was feeling strong, Barteau would make his way over to LeMond before the start and warn him, "Keep your head up today, Greg, things are going to happen." When Barteau won the 13th stage in Marseilles, he dedicated the win to LeMond, a gesture that raised LeMond even higher in the esteem of the French populace.

Then on July 15, with a week to go in the race, LeMond recaptured the yellow jersey. He did so impressively, beating Fignon by 47 seconds in the second of the Tour's three individual time trials, a margin that gave him the overall lead and a cushion of 40 seconds. Any doubts that LeMond had had about his climbing ability were laid to rest permanently at this stage—the first of five grueling days in the Alps. The route went from the city of Gap (elevation: 2,400 feet) to the Alpine resorts of Orcières-Merlette (6,003 feet), a distance of 24 miles, which included climbs of five and six miles. That night, after he had finished, LeMond felt stronger, both physically and mentally, than the had when he won the 1986 Tour. He knew now he could win the race.

LeMond had even stopped thinking of Fignon as the man to beat. It was Delgado, just 2:48 behind and in fourth place, whom LeMond would watch out for as the Tour continued through the Alps.

Visibly struggling, Fignon lost another 13 seconds to LeMond in the 16th stage, from Gap to Briançon, a 108-mile route that included a tortuous 13-mile climb up the Col d'Izoard. LeMond pressed the pace all day in an effort to stay with Delgado and drop Fignon once and for all. But, as it turned out, the Frenchman's powers of recovery and, perhaps, his pride were greater than LeMond had anticipated. "I killed myself to do well in that stage," says LeMond. "And I paid for it the next day."

He paid because the next day finished with the climb L'Alpe d'Huez, the single most difficult ascent in the Tour de France. It is an annual event on the Tour, a punishing spectacle to which some 250,000 spectators travel, waiting along the roadside as long as 24 hours to exhort the riders up the 6,000-foot, 15-kilometer climb. Other ascents are longer, a few are steeper, but none is more dramatic than the 21 switchbacks of L'Alpe d'Huez, which this year came at the end of a 100-mile, five-hour-plus stage that included two other mountains rated "beyond category" in height and difficulty. It was the stage that nearly cost LeMond the Tour.

Delgado, LeMond and Fignon reached the base of L'Alpe d'Huez together, paced by a Colombian, Abelardo Rondon, a teammate of Delgado's. LeMond knew—as did the others—that if he could stay with them during that climb, he would almost certainly win the Tour. It was the last major test before the time trial into Paris, and time trials being LeMond's forte, if he could retain his 53-second lead, he would be all but uncatchable.

Rondon set a very fast pace from the outset, too fast for LeMond's liking. He was hurting, gritting his teeth to keep up. Delgado apparently wasn't faring much better, for he finally shouted to his teammate to slow down.

Seven kilometers from the top, halfway up L'Alpe d'Huez, LeMond began running out of energy. When he is truly laboring, as he was now, LeMond's shoulders start to bob back and forth. Fignon's coach, Cyrille Guimard, recognized the signs immediately. In 1980, Guimard, then with the Renault team, had signed LeMond to his first European contract. So Guimard sped his car up to Fignon and shouted to him, in French, "You've got to go now! Right now!"

LeMond, just ahead, could hear every word, but he resisted the urge to look back lest Fignon recognize the look of panic on his face. "I can't do it," Fignon replied. "I can't."

Guimard's car dropped back. The pace continued as before. LeMond's shoulders continued to rock. Four kilometers before the finish Guimard drove up to Fignon again and yelled, "Attack him now! You've got to go now!"

Fignon went bolting past LeMond and Delgado. Delgado responded, but LeMond couldn't keep up. With three kilometers to go, he had dropped 35 seconds behind. Two kilometers from the top, LeMond was 52 seconds back. He gathered what reserves he could and finished the stage 1:19 behind Fignon and Delgado, who had ridden together to the top. LeMond had lost the overall lead. Once again, the yellow jersey was Fignon's.

Still, LeMond trailed Fignon by only 26 seconds, a margin he was confident he could make up in the final time trial into Paris. Fignon, too, was uncomfortable with so narrow a lead, and he made a daring solo attack the next day during the relatively short (57-mile) 18th stage. The attack caught LeMond by surprise. Fignon, riding the last 14 miles alone, won the stage by 24 seconds, increasing his overall lead to 50 seconds over a dejected LeMond. When Greg saw Kathy afterward, his first words were, "Maybe I lost the Tour today."

He certainly had, as far as everyone else was concerned. The French media crowed about Fignon's panache and forgave him his past indiscretions. In postmortem tones newspapers and television commentators praised LeMond for lending drama and gumption to the race. No one seriously entertained the notion that he still had a chance to win, particularly after he gained no time on Fignon in the 19th stage—the final one in the mountains—despite outsprinting Fignon to the finish in Aix-les-Bains for his second stage win of the Tour.

Even Fignon believed the race was over. He told LeMond before the 20th and penultimate stage—an uneventful ride during which everyone saved his strength for the next day's time trial—"You raced a great race, Greg. I have to tell you, my coach, Guimard, predicted that this is the way it would finish, me winning and you second. He said at the Tour of Italy, you'd be the most dangerous rider."

LeMond thanked him and told Fignon that he, too, had raced a great race, particularly over the last few days. But he was thinking, it's not over yet, pal. And you're not psyching me into quitting.

Because, the way LeMond had it figured, on a normal day, when both he and Fignon were riding to form, he could beat Fignon in that Versailles-to-Paris time trial by 30, maybe even 40 seconds. On a normal day. With the advantage of the tri-bars, plus the aerodynamically designed helmet LeMond planned to use, who could tell? Those two things could easily be worth another second per kilometer, which would bring the total up past the 50 seconds he needed. Besides, LeMond felt terrific, the best he'd felt the entire Tour, fully recovered from that brutal climb up L'Alpe d'Huez. And he had nothing to lose. He had already accomplished far more than he had hoped. The

night before the time trial, he told his masseur he thought he could win.

"That's the way to talk," Jacome said.

There was a festive air about Paris on July 23, which dawned warm with a slight breeze. LeMond rode the course in the morning to get a feel for it and was concerned because it was so easy, with a 200-to-300-foot drop at the start and no significant climbs. He had already decided he didn't want aides in his support vehicle to tell him his splits or how he was faring in relation to Fignon. That would only detract from his concentration. LeMond's plan was to put his head down and ride as fast and as smart as he could for 24.5 kilometers (15.2 miles).

Fignon, on the other hand, asked Guimard to keep him informed of LeMond's progress. After trying his own version of the tri-bars in a practice ride that morning, Fignon had gone back to the cowhorn-style handlebars that are preferred by most European racers. Inexplicably, Fignon chose to discard the racing helmet he had used during earlier time trials and went hatless, letting his ponytail flap in the breeze—a triumph of vanity over aerodynamics. Fignon, you see, was treating this race into Paris as little more than a formality. He was too strong in mind and body for LeMond to make up the 50 seconds (although Fignon later revealed that he was suffering from a boil on his backside that had to be anesthetized). He did not believe he could lose.

Fignon took off two minutes behind LeMond. After five kilometers Guimard shouted to Fignon that he had already last 10 seconds. No way! Fignon cranked his pace up a notch. It did no good. After 10 kilometers he had lost 19 seconds to Lemond. What? After 14 kilometers, 24 seconds. After 18 kilometers, 35 seconds. Harder and harder Fignon rode, panic creeping into his legs.

LeMond, meanwhile, had no notion of the stir he was creating until he reached the Champs-Elysees, about three miles from the finish. Heading up toward the Arc de Triomphe on the big cobblestone avenue, LeMond thought he heard the public-address announcer say he had gained 35 to 40 seconds on Fignon. Some spectators, sensing an upset, were waving American flags as he approached. But LeMond kept his head down, holding his tuck position, allowing his helmet to slice through the wind, only lifting it every few seconds to get a sight reading and a breath of air, like a swimmer pushing a kickboard.

LeMond nearly caught Delgado, who had started two minutes ahead of him, crossing the finish line in 26 minutes, 57 seconds. His time was 33 seconds faster than the previous best, which had been posted by Fignon's teammate Thierry Marie. Now there was nothing to do but wait.

LeMond, alternatively glancing at the ticking digital clock and the flashing lights of the caravan of vehicles trailing Fignon, knew that the outcome would be close. That, in itself, was exhilarating. LeMond was tired but not spent. It had been too short a ride to exhaust him. He could make out Fignon now, wearing the yellow jersey, barreling toward the finish. Watching the clock, then Fignon, hearing the roar of the fans, LeMond kept thinking how terrible it would be to lose by one second after more than 2,000 miles. Then that second quietly passed . . . 27:47 . . . 27:48. . . . He had won.

Fignon crossed the line with the third-best time of the day, 27:55—58 seconds slower than LeMond. Had the two of them started in Versailles that day side by side, LeMond would have won the race by some 900 yards. It was a margin that, even now, seems incredible. LeMond had averaged 34 mph—the fastest time trial ever in the Tour de France. Fignon, thinking he had won even as he crossed the finish line, slid from his bike and collapsed in exhaustion. It wasn't until his masseur, holding him in his arms, said, "Laurent, you lost the race," that he knew the truth. His mind went blank. Holding his head in his hands, Fignon burst into tears—the first time he had cried since he was a child.

For LeMond, well, you can imagine. After pumping his fist in the air a few times, he was in shock. He wanted to find Kathy. Then he wanted to find his father, Bob. Those were the two people who had never lost faith in him. He wanted to remember this moment exactly as it was, always.

On the victory platform, looking out across the sea of faces and awaiting the playing of The Star-Spangled Banner, he thought back on the events of the last two years with a sort of wonder. "I kept thinking about how I almost quit two months ago, and what a good thing it was that I never give up early," he says. "That's what it taught me. Never give up early. The last two years have really reinforced that."

In September, as a magical postscript to his comeback year, LeMond won for the second time the professional road race at the world championships, in Chambéry, France. He thus becomes only the fourth cyclist to win the worlds and the Tour de France in the same year. His foil, again, was poor Fignon, whom he chased down three times in the last 2½ miles of the 163-mile race.

It was another magnificent performance by this country's greatest cyclist, especially so because the winner of the Tour de France is always a marked man at the worlds. But it did not qualify as a shocker. Not after what happened in July. Notice had already been served. With his prime competitive years now upon him, Greg LeMond, Sportsman of the Year, is back on top of the heap.●

DANIEL DUTTON

● Mr. McCONNELL. Mr. President, I would like to bring to the attention of my colleagues a recent article in the Louisville Courier Journal that acknowledges the vision, creativity and contributions a fellow Kentuckian of mine has made to the art world.

Daniel Dutton is truly a gifted individual. His genius lies in his ability to interpret his thoughts and ideas onto either canvas or clay. His mastery of these two concentrations within the artistic genre have served as the catalysts to realizing his long-term desire of becoming a successful composer.

The Courier Journal points out that it was during a painful period in his life where his success as a painter and sculptor seemed shallow because creating works that sold immediately was becoming too easy. The answer to Mr. Dutton's dissatisfaction with his work was found in a dream. After experiencing this very vivid unconscious fantasy Daniel Dutton found a story line intriguing enough to serve as the foundation for a full length opera.

As mentioned in the Courier Journal, Dutton's 1987 dream solved his problem, and "Stone Man" has been pretty much a full-time obsession ever since. In addition to composing the score, he has made more than 500 drawings to serve as scenic and costume designs. Daniel Dutton's all-around contribution to the success of his opera and the many hours of work such success demands illustrates the devotion this gifted individual is willing to make so that his story can be shared and appreciated by the general public.

I commend Daniel Dutton for his contributions to the art world and I encourage my colleagues to read the Louisville Courier Journal article which I am inserting into the RECORD at this time.

The article follows:

FOR DANIEL DUTTON, "STONE MAN" IS TRULY CULMINATION OF A DREAM

(By William Mootz)

Daniel Dutton vividly recalls a dream he had in 1987, during a particularly painful period in his life. His success as a painter and sculptor seemed hollow because creating works that sold immediately was becoming too easy. At the same time, a long-time love affair was falling apart.

Then, at what he now calls the bleakest period of his life, came a dream that seemed prophetic in the way it symbolized his despair. Impressions distilled from that dream became the basis for "The Stone Man," an opera that the Kentucky Opera will present beginning Saturday at the Kentucky Center for the Arts.

The dream that inspired "The Stone Man" was a "real humdinger," Dutton says, and the way he speaks of it leaves little room for doubt. As it began, he saw a tomb in which acolytes were wrapping a body.

"I realized the sleeping body was me—that everything happening in the dream was happening to me," Dutton says.

The dreamscape then changed, and Dutton found himself climbing a hill on his family's farm near Somerset, Ky.

"Sunlight was drifting through leafy trees, just like the way I had portrayed it hundreds of times in my paintings."

When he reached the top of the hill, he found himself in a family graveyard where relatives both living and dead were gazing peacefully across the hills.

Then, across a field, appeared "a malevolent hag. I felt compelled to follow her. I knew she was taking me to show me something from my past. Suddenly we stood in the doorway of an old mill, and I started to hear music."

At this point, Dutton says, he began to panic: "I knew the music would become part of my opera, and that I had to remember it."

But the dream continued as two figures came into the mill. One was a man, made entirely of black basalt. The other, a woman, was a tart, and the two of them seemed locked in an unending journey, during which they had to return to the mill over and over again.

"The stone man represented perfect beauty, the woman wantonness," Dutton says. "I knew I had to do something to release them."

His dream then grew even more dense in symbols, involving hidden gold that burst into flames, violent crimes, the man of stone changing into an ordinary human with a bloodied head, and Dutton picking up a gun to commit murder. At this point he awoke; he immediately began to write down incidents and fragments of melodies that he would later use in his opera.

For Dutton, each incident in the dream had significance. His dream dilemma became a symbol of the impotence he felt in his waking life. By using it to create an opera that asks questions about violence in the contemporary world and a painter's responsibility to create objects of perfection, Dutton felt purged of pain and restored to equilibrium as a creative artist.

Dutton is fascinated by dreams and their relationship to a person's waking life. He keeps a journal of his dreams and works to control them, just as he tries to control his actions in his waking life. He calls this "lucid dreaming."

"Dreams are grist for my mill," he says. "They provide clues for what I do as a creative person. The struggle to gain technical control of his tools is one of the artist's hardest jobs."

Nothing from the dream that inspired "The Stone Man" is brought to literal life in the opera. Instead, the libretto deals with a Dreamer, who is "a vessel of imagination," as he wanders through a series of 31 scenes in search of knowledge.

"I wish I didn't have to cast the Dreamer as a single gender," Dutton says. "It really isn't fair. But I had to because of vocal considerations, so the role is sung by a kind of high baritone."

Dutton was born 30 years ago on the family farm where he still lives. He was the youngest of six children—"much the youngest"—with the result that his older sisters taught him to read long before he started school. He lived a charmed childhood as a pampered, multitalented, adored sibling.

He was a "reluctant student who wanted to create my own agenda" throughout his teen-age years because he had already read most of what his teachers assigned him. But he got good grades until he graduated from Pulaski County High School, at which time he gave up thoughts of higher education. He preferred to pursue a personal, "voracious" reading program that included the study of folk myths and religions of different civilizations.

Dutton especially enjoys comparative mythology—tracing a folk tale as it takes various forms in cultures based from Northern Europe to South Africa.

"It's fascinating trying to decide why a certain story lasts, and whether it still has something to say," he says.

Although Dutton was supporting himself as a painter and sculptor by the time he was 20 with galleries in Kentucky and Southern Ohio showing his work, his ambition to be a composer had begun to develop when he fell under the spell of Igor Stravinsky in his early teens.

"The first piece of classical music I ever heard was the 'The Rite of Spring.' I begged my parents to buy me a piano, so I could study it, and the first thing I every played was the opening chord of 'The Dance of the Adolescents.' "

His introduction to opera was equally unconventional. Instead of becoming enamored of "Madame Butterfly" or "Carmen," the starting point for most opera buffs, his first opera was Debussy's "Pellas and Melisande," admired by connoisseurs but never enthusiastically embraced by the general opera-going public.

"I loved 'Pelleas' and knew when I heard it that I would write an opera someday," Dutton says. "But I never heard a note of Verdi until the Kentucky Opera gave 'Falstaff' last year. If hearing a great work like 'Falstaff' doesn't rob you of a determination to write an opera, nothing will."

Dutton's trouble was finding a story "that pushed me hard enough to begin. For a while I considered Poe's 'The Fall of the House of Usher' but gave it up because its mood seemed too monotonous. I finally decided just to wait for an idea strong enough to move me. When that happens, I thought, I'll make it into an opera."

Dutton's 1987 dream solved his problem, and "Stone Man" has been pretty much a full-time obsession ever since. In addition to composing the score, he has made more than 500 drawings to serve as scenic and costume designs.

While admitting that composing an opera is an enormously complex undertaking, Dutton seems undaunted by his lack of a formal musical education. He speaks of musical motives—"there are more motives in this opera than I count"—and claims that every aria derives from a single melodic cell that he also used as "musical building blocks."

This is not the language of a "typical hillbilly who reads music only laboriously" as Dutton describes himself. A listener gradually learns that such self-deprecating humor often masks an intense seriousness about himself and his role as an artist who knows he has something to say.

"I'm a regionalist, but I'm not an isolationist," he says. "There are folk influences in my music, but my opera is not a folk pastiche. There are other influences: a bit of Mozart here, a memory of Beethoven there. It's like making a quilt. You take all these musical pieces and make new patterns to give your work special emotional impact."

Orchestration was a special problem. "I hear orchestral sound as color, the way I use color as a painter. I finally settled for 14 instruments—winds, strings, piano and percussion, although if I had unlimited resources, I would have made it larger and more conventional."

As if to avoid giving the impression that he takes himself too seriously, he tells about a spectator who sat for hours in front of a mixed-media exhibit erected by Dutton at the J.B. Speed Art Museum. It featured wildlife gathered around a rippling stream.

Dutton's curiosity about the man's interest in his exhibit finally got the best of him, and he introduced himself to ask what the man thought.

"You should market this for stress," the man said.

"So I did. And I called it an opera."

Dutton then shifts gears to speak movingly of people who have exerted a powerful influence on his career—balladeer Jean Ritchie and the songs she taught him; his father, Joe, and the yarns he spins.

"My father says that ghosts can't harm you, but they can cause you to harm yourself," Dutton says. "I used this in my opera, when a Parisian chanteuse sings about an unhappy love affair. She questions whether the memory is a ghost that is hurting her."

"The Stone Man," according to Dutton, "runs about 85 minutes and is a hard work to explain but an easy work to experience. It's very romantic and melodic. I just hope people will be drawn in by its spell and trust it enough to let up their guard and enjoy."

Dutton is aware that the Kentucky Opera is taking a gamble in producing an opera by a composer of such limited experience. When he took his idea to general director Thomson Smillie, "I think he was impressed by my spunk. I have a high amount of respect for the tolerance shown me in creating this work. And I don't think calling me 'self-educated' has much meaning. That doesn't take into account the enormous number of people who have demonstrated faith in me by giving me information, or the countless artists and authors whose works I've read and plundered."

Dutton hopes to write more operas, because "opera is storytelling with all the stops pulled out. But there's a question of whether I'll be asked. And then, if I am, whether I'll have another fit like the one that brought on 'Stone Man.' "

"Composing an opera is hard work, so the muses may have a hard time tricking me into doing it again. Although, to be perfectly honest, I already have a couple of ideas that seem promising."●

BRONKO NAGURSKI: FOOTBALL'S TRUE LEGEND

● Mr. DURENBERGER. Mr. President, on January 7, 1990, the sports world lost football's true legend, Bronko Nagurski.

At 6 feet 2 inches tall and weighing 235 pounds, Bronko combined speed, power, and ruggedness on both sides of the line of scrimmage. Famed sportswriter, Grantland Rice, called him the best all-around football player he had ever seen, and in 1963, Bronko was named a charter member of the Pro Football Hall of Fame.

Born in Rainy River, Ontario, Canada, in 1908, Bronko moved to International Falls, MN, 3 years later. Because his given name, Bronislau, was difficult to pronounce by a school teacher, he was nicknamed Bronko.

Bronko won All-America recognition playing football for the University of Minnesota from 1927 to 1929. In 1929, he became the only football player in history to be honored as an All-American at two positions, defensive tackle and fullback, in a single season. After his college days, Bronko was signed by George Halas and joined the Chicago Bears for $5,000 per year.

While with the Bears, Bronko helped them win NFL championships in 1932 and 1933 and was voted All-Pro three times. While Bronko's teammate, Red Grange, was known for his speed and ability to run around players, Bronko was known for running over players. When his $6,000 salary request for the 1938 season was refused, Bronko retired and became a professional wrestler. Bronko returned to football for one more season and helped the Chicago Bears with another championship in 1943.

His career is full of legendary exploits and stories. In one of the most famous Bronko stories, he scored a touchdown against the Redskins on a play that began when he ran through

the center of the line, sending two linebackers flying, ran over a safety, knocked down the goalpost and stopped only when he smashed into a brick wall beyond the endzone. When later asked about the run, Bronko responded "that last guy hit me awfully hard."

Bronko retired to International Falls to operate a gas station and raise six children with his wife, Eileen. It is said that he got a lot of return business because no one could remove the gas caps after Bronko screwed them in. Although his arthritic joints gave him much pain, Bronko would not leave International Falls and the fishing that he could enjoy just outside his home on Rainy Lake.

Bronko Nagurski played football when the sport was young. There were no million-dollar-a-year salaries or product endorsements for players. Football players wore leather helmets with no faceguards, wore little padding and played on offense and defense. Steroids had not been invented. Men played the game of football because they loved the game.

Although Bronko has passed away, his legacy lives on. His jersey No. 72 has been retired at the University of Minnesota, the sports teams in International Falls are named after him, and he is a charter member of the Pro Football Hall of Fame. These events all testify to Bronko's place in American sports history. When one thinks of baseball, one thinks of Babe Ruth. When one thinks of football, one thinks of Bronko Nagurski, a true legend of the game.●

REMARKS OF DR. RICHARD LESHER

● Mr. LUGAR. Mr. President, today I rise to introduce as a part of the RECORD remarks made by Dr. Richard Lesher, president of the U.S. Chamber of Commerce, to students at the Prague School of Economics in October of last year. I urge all of my colleagues to read the address which Dick Lesher gave and his dialog with the students which followed.

Dick Lesher has spent his career, both as a professor and in his association with the chamber for the past 15 years, espousing the benefits of the free enterprise system. Under his leadership, the U.S. Chamber of Commerce has grown to be the world's largest, most diverse voluntary organization. The chamber works tirelessly to encourage all nations to participate in free and open trade, and to provide economic and political freedom for all.

Dick accepted the invitation to speak to students at the Prague School of Economics with great enthusiasm. It gave him a unique opportunity to express the chamber's interest, and indeed his own personal interest, in spreading democracy and free enterprise throughout the world. Dick made compelling arguments for the achievement of a strong economy through free enterprise. I found the questions asked by the students after the address to be particularly enlightening, as they reflect an apparent thirst for knowledge about how the United States achieves all that it does in the competitive world marketplace.

I commend Dick Lesher and the chamber of commerce for their efforts in working toward peace through prosperity. Dick Lesher's remarks are an important reflection of these efforts.

The material follows:

LECTURE AND QUESTION AND ANSWER SESSION OF DR. RICHARD L. LESHER AT THE PRAGUE SCHOOL OF ECONOMICS

[Introduction in foreign language.]

[Applause.]

Dr. LESHER. Dubre den [phonetic].

[Applause.]

That is the extent of my facility with your language.

I thank you so very much for your warm, warm welcome and for your enthusiasm. Please feel free, those of you who do not speak English as well as you would like, to whisper with your neighbor and let them help you out as I go along. Today it is okay to speak up in class to your neighbor even though on other days it is not acceptable.

I am indeed very much honored by your presence. I have been looking forward to this moment with great anticipation. In your country I have had a very outstanding program. We just came from a meeting with the Secretary of the Central Committee. And we will have meetings with other distinguished people like that all day long.

But I want you to know that I put this meeting at the top of my list of priorities, because at heart I am a professor and I like to be with young people. Because the future of Czechoslovakia is in your hands. I do not want you to take that responsibility lightly.

And I come to you not with a lot of answers but with a lot of questions, questions which I raise, and questions which you should be raising.

I have the good fortune to be in my position for almost 15 years. And in that 15 years I have traveled to all corners of the world. I have been in more than 60 countries in that 15-year period. I have been in all of the states of the United States, most of them many times. And some of the countries I have been in many, many times.

But I am convinced that the problems and the opportunities of economic progress and human progress are the same in all corners of the world. So I want to convey to you and share with you some of the conclusions that I have arrived at. And most importantly, I want to spend as much time at the end with your questions.

But let me begin with some reference to history, to economic history, which might be new to you even though you are all scholars of economics and business. The Dean, by the way, told me that there are 10,000 students here at the University studying. And I asked him how many are here who are not studying? And he was not able to answer me. But he said a few.

But at any rate, let's begin with a brief moment on economic history of the world. The London Economist some time ago published some numbers which interested me, which pointed out that mankind has lived in poverty throughout history. It pointed out that at the time Christ walked on earth, income per capita worldwide was $200 per person per year, income per capita worldwide 2000 years ago was $200 per year.

Nearly 1800 years later when America was founded, the centuries had come and gone, families had come and gone, generations had come and gone, and one thing had not changed. Income per capita worldwide was still $200 per person per year.

And the conditions in early America were worse than the conditions anywhere else. It was a colony. It was a frontier. And many of our founding fathers did not survive the bitter winters, the food shortages, and the like.

But in the later part of the Eighteenth Century, we put together a new experiment in human progress, something called the United States of America, based upon some new ideas, some noble ideas. And in the process we generated a machine which created wealth and lifted mankind out of poverty for the first time in history.

And some of the basic principles of our Constitution I would like to share with you today, because I believe that those principles are crucial for unleashing the potential of man and woman to reach their full economic potential.

First of all, our Constitution guarantees a government of the people, by the people, and for the people. It became one of the rallying cries, one of the things that the young people adopted most vigorously in Mainland China. But our government, our Constitution, attempted to limit the role of government and to extol the virtues of the individual. And I suggest to you that that is very important for all countries.

A second thing that our constitution did was to prevent tariff and non-tariff barriers among the states. At the time of the colonies we had trade barriers between the colonies. And as a result, we didn't have much trade between the colonies. The Constitution outlawed tariff and non-tariff barriers and made America at once a free trade organization and created the world's first common market, as all of our states traded without barriers. That was one of the key things that made our economy so strong over the years.

A third basic foundation of our Constitution is the right to hold debt.

A system of private enterprise based upon private property and using the profit to turn the system on, a guarantee that you have the opportunity to compete but not a guarantee that you will be successful, a system of risk and return, a system of profit and loss, a system which encourages individuals to succeed if they are willing to put forth the effort to do so, and finally, the right to retain the fruits of those efforts. In short, the American dream was born, the dream that someone born into poverty could become rich. Someone born into a family that was uneducated could became a Ph.D. or professor, a system that guaranteed that a person with ability could enter a field that needed such abilities.

And over the course of a relatively short span of 200 years from the time of our Constitution in 1976, in the short period of 200 years after living in poverty for 2,000 years, we saw income per capita go from $200 per person per year to more than $18,000 per person per year. We saw a frontier nation turned into the largest market in the world, the largest industrial machine, with the highest standard of living. We saw America become a leader in science and technology and management and research and develop-

ment. We saw a country that broke the frontiers of space, interplanetary research.

And most of all, we saw a country willing to share its ideas, its notions, its trade, its investment with friends all over the world. And many countries have copied that system. In fact, some countries copied it too well. Japan and Korea and the newly-industrialized nations in Southeast Asia have indeed copied our system very well and improved upon it. And they too are doing very well.

Today we live in one world, a world of competition in all corners of the globe. And America is still a world leader even though many other countries have begun to catch up, Japan and Korea and the countries of Western Europe. Nevertheless we are continuing to grow year after year.

We now have 14 million business firms in America. We have 136 million full-time jobs. We have seen the creation of 20 million new jobs in the last seven years. We still do have the largest economy, the highest productivity. And we are the largest exporter as well as the largest importer.

And the principles of our Constitution are still operational. It is still easy to start a business. If you have an idea, if you have a dream, you can be in business overnight. And in the last three years, there have been 2 million new business firms. Think if that, 2 million new companies formed in America in the last three years.

Now, you read in the popular press that America is going out of the manufacturing business. But the popular press is often wrong and misleading. We have 50,000 new manufacturing companies in the last ten years. Individual incentives still work. People do start businesses. Some of them go bankrupt, and others become millionaires virtually overnight. The policies that were put into our Constitution are still serving us very well.

The organization that I represent, the United States Chamber of Commerce, celebrated its 75th anniversay two years ago. And as part of that process, we went back and looked at what are some of the problems, what were some of the problems, that troubled American business back at the beginning of this century. And it was very interesting to see what those problems were.

Number one, the over-taxation of business and individuals. Number two, the overspending by the government. Number three, the over-regulation of business by government. And number four, the competition for trade in all corners of the world. Those are still the four most important issues facing us in the 1980s. They are the same issues that face Czechoslovakia. They are the same issues that face all countries of the world, because we do live in an interdependent world.

In the spring of last year, President Ronald Reagan addressed our membership for the last time as President. And he recounted the history of his eight years as President. The so-called Reagan Revolution was a revolution that came about in 1980 because the American people were ready for a new revolution. Taxes and spending had become too high and our economy was bogging down.

So in his speech President Reagan was reciting his success at reducing taxes and reducing regulation and opening up trade even further with all corners of the world. And he told us that the Reagan Revolution was successful only because the American business community was behind it. And he paid tribute to our Chamber membership for bringing about the changes in public policy that caused economic growth to begin rising very rapidly once more.

And I think there is a lesson there for all people who believe in free enterprise, that they must understand free enterprise, and they must speak up for it. And President Reagan reminded us that even though we have success in the eighties, that we must always be ready to continue to fight, to continue the debate because taxes have a tendency to go up, government spending is always on the rise, government regulations, there is always one more bureaucrat willing to throw one more regulation in the way of economic progress.

One of our founding fathers had told us to beware of that problem. Thomas Jefferson told us that it is the natural order of things for governments to grow and for liberty to yield. Think about that. It is the natural order of things for government to grow and for liberty to yield.

Well, today we live in a very, very exciting world that you folks will be entering into when you finish your studies. We live in a marvelous age of progress. One country after another is discovering that big government is not the answer for economic progress.

They are turning to market forces, they are turning to market economics, and they are turning to a reliance on individual incentives, individual initiative in order to get their economies growing. They are turning away from big government, government spending and government regulation.

And the result is nothing short of miraculous. In one country after another, we are seeing economic progress that is dramatic and real, the first such progress in many, many years for some of those countries, as they turn away from government programs and turn toward market solutions.

Nine years ago I had the opportunity to lecture in Beijing for the first time in the Great Hall of the People, Mainland China. The Vice Premiere of China was my host. And he opened the meeting by saying China is poor and America is rich, and you must help us.

And I said, no, China is not poor. China is rich. You kept your oil in the ground until the price went up. Everyone there laughed. They understood my joke. But I made that joke to make a point.

I went on to say how is it that such a great nation as China, which has oil in the ground, coal in the ground, natural gas, minerals, a climate, an infrastructure, and one billion people, one billion people with one of the greatest heritages of invention and innovation, how is it that such a great nation lives in poverty? There must be something wrong with the system.

I went on to make the point, I said how is it that such great people live in poverty in such a great country with so many resources, but if they are pushed off the continent into a place called Taiwan, which used to be called Formosa, with no natural resources, no coal, no gas, no oil, how is it that in such a desolate place those same people could create a gross natural product per capita 14 times greater than those people on the Mainland?

How is it that the same people when they go to Singapore can create a gross national product 25 times that of the Mainland? Or if they go to Hong Kong, which is essentially a Chinese colony, they can create wealth 26 times the wealth on the Mainland? The same people, so there must be something to the said about the system.

It is instructive to look around the world. There are many such examples. I will just share a few more with you, just to make the point and raise the question, why is it that the gross national product per capita in South Korea is more than three times that of North Korea? The same people, the same peninsula, the same climate, the same resources.

How is it that the West Germans——

[Laughter.]

This is a very good group. They are ahead of me.

How is it that the West German gross national product per capita is more than five times greater than the gross national product per capita in East Germany? Why is it that the gross national product in Austria is five times greater than that of Hungary? Or you could go on to ask why is it fifteen times greater in America than it is in the Soviet Union?

Now, this is an interesting period in history when we are all allowed to raise such questions and pose our own answers. My answer is a very simple answer, that we have a system in America where we have mobile capital, mobile labor, and incentives for both capital and labor to advance human progress through an economic, political and social system which is based upon individual initiative, incentive, freedom, and opportunity.

It does not take much more than that: incentive, initiative, freedom, and opportunity. Those are the key elements for economic success. Mobility of capital and labor, incentives, private property rights, and the market determining the allocation of resources, supply and demand conditions arrive at a price and a price allocates those resources better than some bureaucratic planning machine can do. A system of profit and loss with no guarantee of success, that is our notion, that is our idea that we wanted to share with you.

Czechoslovakia can be proud that the gross national product per capita today in this country is 16 percent higher than it is in East Germany and two and a half times greater than the Soviet Union. But are you going to be satisfied that gross national product in this country is only one third of what it is in Austria, one fourth of what it is in West Germany, or 20 percent of what it is in Japan?

Those of you who have studied your national heritage, your national history, know full well that there was a time when Czechoslovakia was number one in many fields. The middle of the last century——

[Applause.]

No, wait, wait. I didn't mean it that way. That was one of the times. But you ought to all be very, very proud that in the middle of the last century the entire world was benefitting from management policies, labor policies, and technology which were flowing from your country. And that progress continued into this century. You have a proud history, a proud heritage, an inventive people who understand the processes of innovation and technology.

And there wasn't a long, long time when you lead the world. But recently your unmet human needs, the list of unmet needs, is growing longer. I don't need to recite all of them for you. The infrastructure, the need for sewers and water purification, mass transit, highways, communications, the whole challenge of the environment, cleaning up the environment, the air, the water pollution, the demands for new energy sources, the demands by the con-

sumer for a wider variety of high-quality products at a low price.

Your economic system has some problems with currency, with foreign exchange, with capital shortages. But where we come from we believe very strongly that problems are there to be solved. And you have the capability of solving these problems.

As I've said, you have an inventive history. You have a prime location. You have a great climate. You have a good education system with a good work force, well educated.

But today your country stands at a crossroads. The great debate is going on of which road to take.

We in the West are a little bit confused about exactly which road you are going to take. So I came to see for myself. And I'm not sure that I have all the answers yet. But let me just give you a little example of how that decision is being played in the press.

Last month on September 12—this paragraph I took from the Washington Post—Poland and Hungary have adopted free market incentives and have taken steps forward toward multi-party democracy as part of an effort to invigorate their societies, while East Germany, Rumania, Bulgaria, and Czechoslovakia have staunchly resisted such pressures to make such moves.

Only one month later the exact opposite report was contained in the Washington Post. And it went to the extent that your foreign minister, Mr. Johannes, said that your country will implement deep-rooted changes aimed at democratization and economic stability, a deeply democratic political system, and private enterprise.

If that statement is correct, we will be the first to applaud and say congratulations. And you people, young people, you have a role and a responsibility to help make that happen. The future belongs to the young people. And you must take those responsibilities very carefully.

Today the world is changing, more dramatically perhaps than at any time in history. We are seeing dramatic changes, not just in Poland and Hungary. But the Soviet Union is undergoing changes today that were totally unthinkable five years ago. The United States and Japan, virtually all of Latin America, are all constantly reevaluating public policies to see how we can improve, how we can make our system better.

Western Europe is working everyday on EC 1992, their notion that by 1992, Western Europe will become one large market. When it does, if it does, it becomes the world's largest market overnight, the largest importer and the largest exporter. They are trying to drop their trade barriers among themselves to encourage trade and investment.

So all over the world change is taking place. And the most popular word on earth is competitiveness. What does it take to become competitive? What does it take to become competitive in this rapidly-changing world of ours?

We do indeed live in our global village, spacecraft earth, one world, one world which is indeed competitive. The only thing that we can count on for sure is that we will have more change, technological change. And the lessons of history are being reduced to a handful of principles. One government after another is working very hard to reduce taxes, to reduce spending, to reduce regulations and to privatize, to put into private hands the tools of economic production.

A few weeks ago I met with President Menhem of Argentina. They experienced inflation of 192 in one month this year, in July. Today their inflation rate is down to six percent per month. And next year they expect an annual rate of inflation under 16 percent for the entire year. That is a small economic miracle, because they are doing everything at once.

Two months ago I was in Mexico, met with President Salinas. It is the same story there, an economy that had been an economic disaster for a long, long time, a country that had been nationalizing one industry after another up until just a few short years ago. They are now privatizing everything as fast as they can, reducing taxes, reducing spending, privatizing, and reducing regulations in order to attract foreign capital to build their future.

In the Soviet Union, which until three or four years ago didn't like the idea of capital coming from the West, they are now signing joint ventures with Western companies daily to build their economic future. And all of this is wrapped up in these new words of glasnost and perestroika, a time when we can stop, when we can examine our history and the future as we see it, and we can work to influence that future is a measured, intelligent way.

That process is going on all over the world, including Czechoslovakia. And you have taken the first steps. You have a new investment law. It remains to be seen how the regulations will be published, what that investment law will mean to everyone. You have the beginning of decentralization of decision making. You have new banking regulations, and you have a lot of other efforts in the mill being developed.

But there is so much more work to be done. It is not good enough any more to be as good as your neighbor or slightly better. Capital moves throughout the world instantly. We know that every day from the news. The New York Stock Exchange fell 190 points on Friday and sent quivers around the world to the Tokyo Exchange, the London Exchange, and so on. Capital moves rapidly, as does communications. And people move just as quickly.

In my opinion, no issues are more important than these. You must deal with the current convertability. You must deal with price reform. You must deal with private ownership and incentives and profits.

Your government has pledged to lead the way. Your government needs support, enthusiastic support, to move in the direction of these reforms. I speak not only of economic reforms, but I think I speak of political reforms as well.

Your government has said that these reforms will take place in a very careful and a very measured way. I think that that is reasonable and wise. But I would add a note of caution, that the day is late and the hour is late, and it is time to begin to do more.

Delay of these decisions will not make the decisions any easier. And the lead that other countries have, that I spoke of earlier, gets bigger every day. It is your future. You and your friends and your families in all corners of this great land, I suggest that you give a lot of attention and a lot of thought to how you might help that process along.

In America we stand ready to assist. We will be entertaining a trade and investment mission in Washington next month, which will come from Czechoslovakia and discuss trade and investment opportunities. We have been discussing a lot of ways that we can cooperate, everything from seminars to space bridges, discussion via satellite, and so forth.

We want this new era to succeed in Czechoslovakia, in the Soviet Union, in China, and all over the world.

Let me try to summarize so that we can get on to the questions and answers. In our country, we now have the longest expansion of our economy in our history, 83 months of uninterrupted economic growth, unemployment the lowest that it has been in many, many years, inflation low. And best of all, our economic outlook is that our economy will continue to grow for the indefinite future.

That is good and it is probably good for most of our trading partners, because we do still have a lot of influence on the world economy because economy is so large. But based upon the progress of the last 20 years, it is easy to predict that the next 10 years will be the most productive period of economic growth in all of history. All of the forces are in place to make that a very safe prediction, the technology, the labor, and the capital are all there moving in the direction of even more promising growth.

So we're at the dawn of a new era in human history. Throughout most of history, mankind has lived under the shadow of two overriding fears, the fear of poverty and the fear of war. I would suggest to you that we've done more worldwide in the last ten years to bring down and to reduce those fears than anytime since the dawn of history. And we can predict with a high degree of certainty that the competition in the future will stand up well throughout that period.

We believe very strongly that this country has the potential to compete with anyone if the right policies are put into place and the right decisions are made here at this key decision point in history.

The American business community, the United States Chamber of Commerce, and our government all care, we do indeed care, about the future of Czechoslovakia. We want you to succeed. We want human progress through economic progress for all of the people of the world.

The 21st Century, we can be sure, will be exciting, will be full of challenge, full of change, and indeed will have the greatest prosperity that we have ever seen in all of history. But the prosperity will be for those who prepare for it and produce it. It has always been the same.

You young folks as you prepare for your careers, which will stretch well into the 21st Century, you should be excited about that future as we gaze into it. It's going to be very exciting and it's only ten years away. We hope that you individually, your institutions, and your country, will be poised to take advantage of those opportunities in the 21st Century.

Thank you very much. And I will be glad to try to answer any of your questions. [Applause.]

MODERATOR. Thank you, Dr. Lesher. Thank you very much for a very interesting lecture. And now for questions, it is the time for you, the students. If you have questions, you can put them all in Czech language or the English language. Dr. Lesher will be glad to answer them.

Dr. LESHER. I have a little more difficulty answering them if they are not in English. I hope you understand that. [Laughter.]

Yes, sir.

QUESTION. [Inaudible].

Dr. LESHER. I'll repeat that question if you didn't hear it. Could I tell some of the results of the negotiation with our government.

We weren't really negotiating with your government per se. We were discussing opportunities, some of which I talked about in my remarks. But with the Czechoslovakian Chamber of Commerce and Industry we do have concrete results.

We will be helping on the trade and investment conference that is coming up next month in Washington. We are planning ahead for the next meeting of the Czechoslovakian-U.S. Business Council. We have agreed to share a lot of information on economics.

We in the United States Chamber of Commerce operate a very large communications operation with a very large business magazine, which is going to, in the future hopefully, do a major story on the economic opportunities that are here.

We also operate a very large television studio. We produce regular, daily programming. And some of that programming is available via satellite all over the world. And we are trying to encourage the use of that program to bring it down and to use it here. It is a business and economics news show with emphasis on markets in all corners of the world, emphasis on management, emphasis on economics. And so that is something else that we are talking about.

And finally, we are also talking about doing seminars via satellite where we could open the telephones and have a discussion on some of the major economic issues of our time. Hopefully, we will be doing the latter experiment some time early next year and seeing if that is a useful thing to do, where we would have a panel of economists to look at currency problems, monetary problems, and issues of that kind.

So we discussed a wide variety of potential activities.

Dr. LESHER. Way up in the back.

QUESTION. You say governments can't always do the right thing. Do you mean our government or yours?

Dr. LESHER. Do I have to tell you? Do I have to answer that?

I speak only of my government. They can't plan anything right. And so we oppose our government any time they want to plan anything. We believe the market is imperfect, but it is still the best economic planner the world has every seen.

We let the consumers do the planning with their money. If something is in short supply and large demand, the price goes up. And more entrepreneurs come in and meet that demand, the price goes back down. That is planning.

You might be surprised to know that the number one responsibility of the United States Chamber of Commerce is to lobby our government. We lobby the Congress, we lobby the White House. And we are always trying to get them to move closer to the markets and away from government decision making and government planning and government activities. That is our viewpoint.

Yes, sir.

QUESTION. Mr. President, do you personally believe in perestroika?

QUESTION. Especially for Czechoslovakia?

Dr. LESHER. For those of you in the back of the room who didn't hear the question, the question is do I personally believe in perestroika. And then somebody added on especially for Czechoslovakia.

And the answer is yes in both cases. The question is not whether perestroika and glasnost are real. They are real. The question is what will be the end result, which roads will be taken, which decisions will be made? There are economic necessities that have brought about perestroika.

In our country we have the great debate about Star Wars, if I could just disgress for a second. Ronald Reagan proposed Star Wars. You know, it is a very expensive, high tech, where you could see incoming missiles and take them out of the sky with a big blanket of defense and so forth. And all the people who debated that never fully understood or appreciated that the economics of Star Wars are far more important than the technology, whether it was technologically feasible or not.

It was very clear that it was going to be very, very expensive to undertake that. It was also very clear that the Soviet Union was not going to be able to afford one more huge layer of military expenditure.

So perestroika was inevitable. Change is inevitable. So the question is not whether it's real; the question is where does it come out, and what are the final decisions?

Next question. Yes, sir.

QUESTION. [Inaudible] in the near future?

Dr. LESHER. The question is do I think that Czechoslovakia will be granted most favored nation status in the near future. The short answer is yes.

For those of you who are not familiar with it, most favored nation, or MFN as we call it, is the granting of normalized trade relations between countries. And that has just been extended, as you probably know, to Hungary and to Poland. The likelihood is that it will be extended to the Soviet Union by our Congress sometime within the next year. And I expect that soon after that it will be extended to a number of other countries in Eastern Europe.

I think again, perestroika is real, glasnost is real. There are lots of things taking place, including the change of immigration. The Soviet Union has changed dramatically, as other countries are doing as well. Each country must make its own set of decisions based upon the conditions that exist in that country. But those decisions are waiting to be made, and the time grows short.

Other questions? Yes, sir.

QUESTION. You spoke very much about the American dream, about the possibility of somebody that does not have big means to come up. Do you really believe in that? For example, somebody from a poor family in the States can achieve—can become rich as easily as somebody that comes from a very rich family or a very prosperous family?

Dr. LESHER. The question for those of you in the back of the room, I spoke very much of the American dream that a person from a poor family can come up through the ranks and become successful, rich, or whatever.

I believe that with all my heart. It happens every day in America. And I stand before you as probably a very good example. My father did not finish grammar school. My father did not finish eight years of schooling. And he was an ordinary working person. And I was able to go through and earn three degrees. I worked my way through. I worked full time, I went to school full time for three degrees.

But that kind of story in America is commonplace. People from any walk of life can achieve their dreams with hard work. It does take hard work, sorry to tell you that part, just like it takes hard work to study and to become the tops in the class. But effort, initiative are rewarded in our system every day.

QUESTION. But doesn't someone from a rich family have a better chance?

Dr. LESHER. Yes. I think you could probably get into a legitimate debate. The opportunity obviously, if someone is already rich, they might instead of going to public school, they might go to an expensive preparatory school. But I've always had the notion that that probably is a handicap.

Public schools—I'm the product of state universities, which are publicly and privately supported, rather than the private schools. We have a mixture in our country, a wide variety of literally thousands of universities to choose among. And anyone who wants a college degree, an advanced degree, can get them if they're willing to work hard. I have to come back to that.

Way up in the corner.

QUESTION. [Inaudible] is it possible to use your system of financial management [inaudible]?

Dr. LESHER. Let me repeat that to make sure that I heard all of it. You'd like to know my opinion, whether or not it's possible to use our system of financial management in your country?

Not completely our system under your present form of government and your controls on equity and so forth. I believe that that's a critical decision that must be made.

I was in Budapest two years ago, and I was astounded when they told me that they expect to be operating a full-fledged stock market in Hungary within five years. I visited with many Hungarians many times in the last two years, and I have just come from there. And they are well on the way to operating a stock market, selling shares in companies that were previously owned by the government, and beginning to freely trade those shares.

That is our system of the combination of debt capital and equity capital, stocks, bonds, and other bank loans. So we have a wide variety of financial devices that we can choose among. And there is no reason why you could not adopt some parts of that system here if you decided to do so.

But currently that is not exactly the system that you have, as you already know.

Yes.

QUESTION. I do not raise a question, but I would like to use your presence here. I have rarely seen such eager people who are waiting for each one of your words with great interest. I would like to use this presence for something.

You are saying that the reprivatization is one of the forms to change and get better results. Our country has a tradition even before the war. There was a time when our country was much more prosperous. We had state-owned companies, perfect, well-run, example for international economic community. It is not only the ownership that is changing. It is since then the quality of people, you mentioned it, system and quality of people. All these people are waiting. The changes are coming from somewhere. And I agree with them. And I would like to join them in their hopes.

In the meantime, I believe that each one of them must start somewhere. You mentioned the theory that the quality of each individual is decisive. And I want that they know and you confront to them that to get the chance in the States, it is hard work and hard efforts from the students and from the professors. And that our system of rating of students should change, should show who is the good one, who is the best, and who is the worst, as for professors as for students.

And I just wanted to use this opportunity. Thank you very much. [Applause.]

Dr. LESHER. Thank you very much for that statement. I totally agree with that statement. I think it's worth repeating a couple of parts of that.

There are some people who come to America who are not prepared for America. They are not prepared for the competition, for the fast life. Because we do compete. We have an active interest in sports and business. We compete. We thrive on it. We believe in it. But it's not for everyone.

But the good news is that the immigrants, the immigrants who continue to come to America are very, very special people, whether they are Czechs or Chinese or Thais or Mexicans.

We did a study in the U.S. Chamber of Commerce that showed that immigration is much of the life blood and vitality of America, because they are people who are willing to take the risk, to leave home, to go somewhere where they don't know the language, don't have a job, don't have the skills that perhaps are needed in that system, take the chance and go and work. And they go up unbelieveably.

And you asked the question earlier about the American dream. There is considerable evidence to suggest that the American dream works best for new immigrants that don't even have family in our country, rich or poor. These people go to the top because they want the opportunity to succeed based upon their own initiative. It's a marvelous, marvelous story that gets repeated over and over and over.

Some Americans complain about the immigrants because we have so many. And the Congress passes laws to try to limit the number that come in from all over the world. But the world continues to knock down the door and to beat on the door, we want to be there, we want to be part of this.

And they come with the clothes on their back. And within five years, they own the store. But they do it through hard work, hard work, hard work, hard study. Work leads to achievement. And achievement is the greatest satisfaction in life. Whether it is achievement in work, achievement in sports, or achievement in academics, achievement is a reward that no one can take from you.

I believe our system turns on human energies in such a way that it brings out the best in people and causes them to rise to the top. But I believe that all systems can do that in varying degrees. And certainly all systems need it.

So I concur with you completely. It is a very, very good point to make. Thank you.

All the way up in the back.

QUESTION. [Inaudible].

Dr. LESHER. I'll repeat the question, what do I think of the future of the organization of COCOM? Probably limited. It's one of those institutions which probably will change fairly dramatically over the course of the next ten years. I think a lot will depend on a lot of things, not the least of which is what happens with the EC and how does the EC interact with COCOM?

But, again, the one thing that we can be certain of is that there will be change.

I saw another hand over here someplace. Yes, sir.

QUESTION. How long will it take to make our currency converted, or what will it take to make it convertible?

Dr. LESHER. The question is how long will it take or what will it take to make our currency convertible?

Our chief economist is working with the government of Hungary on that same issue. And we're actually talking about the possibility for Hungary developing a whole new currency, which would be backed by a commodity basket, it would be backed by something, like a partial return to the gold standard.

The problem, of course, is that the official rates are irrelevant. And they don't make much sense in terms of market rates. When I gave you numbers where we compared the economies earlier, I was trying to use market rates because you get a very different picture if you use official rates. We all know that the official rates are not the ones that make things happen day in and day out.

To respond to your question what will it take, in essence it will take real value behind the currency, which makes it exchangeable, marketable, around the world. How long will it take? I don't know. Because it relates to all of these other issues as well.

Yes, sir.

QUESTION. [Inaudible] market mechanism for these issues. But I [inaudible] in our socialist economy. So the [inaudible] economic reform. I believe it is possible to [inaudible].

Dr. LESHER. The statement and question is with reference to my belief that incentives in our system work well, that perhaps for this country it is better to try to build upon socialism and build incentives into socialism to get better performance, and it can work here as well.

I would agree that that is possible. But I would say that it has been tried, and it has not worked as well. And it is not something new that is being proposed.

I think in all the countries we talked about earlier that are changing so rapidly, they have tried lots of different ways of making incentives work. And they do indeed work in some places in a socialized environment. But they fail to work in more cases than they do. That's been the experience.

Now, I think everyone in every country has to make their own decisions in that regard. But I think the evidence is overwhelming that the more you rely on markets and private property and private ownership and sharing the profits and the equity, the more likely you are to get success, even in a socialized system.

Yes, sir.

QUESTION. In your speech you have mentioned the European market '92. But the United States together with Canada has signed an agreement to make a free trade zone within ten years. And there are some ideas to include Mexico into this market.

Can you tell us something about this program.

Dr. LESHER. Thank you very much.

The question relates to my starting point of talking about EC '92. But he would like to know about the U.S.-Canada Free Trade Agreement, and the likelihood of including Mexico into a similar agreement as to the one that we've signed with Canada.

The U.S.-Canada Free Trade Agreement will take about eight years to implement. But the idea is to drop all trade and investment barriers between our two countries. The law has been created and ratified in both countries. But it will be difficult, nonetheless, to carry it out. But it is a very, very positive indication of the willingness of both countries to move toward freer markets rather than to move toward protectionism.

I think also it is likely that one day we will have a similar agreement with Mexico. But it won't be within the next two years. But it will probably be within the next five or six.

And the best news of all is that not only are the changes taking place that we've talked about already, but in terms of trade the whole world is moving toward bringing down the barriers to trade where they very well could have moved toward protectionism. I think the more trade we have, the more economic growth we have, and the more wealth creation we have, the higher standard of living. I think it is better for everyone if we work down the barriers to trade.

Yes.

QUESTION. [Inaudible].

Dr. LESHER. The question is what do I think of COMECOM, which is related to the question I spoke on earlier.

I think that the one thing again that we can be sure of is that we are going to see change. Most of the COMECOM are much more concerned about EC '92 than they are about their relationships with each other. And that's not surprising. I mean, Japan wants to know about EC '92. And America is very intensely interested in EC '92.

So I think EC '92 will command a lot more attention. And a lot of the COMECOM countries will be seeking to get bilateral relationships rather than multilateral relationships. It's probably a little bit easier to do so.

QUESTION. You have said that America stands to assist in public [inaudible]. So I would like to ask you if you can specify how the United States, especially the government can—or as far as you can go, but in terms of Czechoslovakia, how you can help Czechoslovakia and how you can overcome certain negatives that are between these two countries.

And [inaudible] in Czechoslovakia, if you can, also tell us how [inaudible] during your visit here.

The question is in two parts. One is how can America help Czechoslovakia. And, two, what are some of our goals during our trip?

Well, there are lots of ways that America can help Czechoslovakia. In our opinion, the single most important way is by encouraging trade and investment. Yes, we do have foreign aid. And, yes, we do give foreign aid around the world. And there are many people in the United States Congress who think only in terms of foreign aid.

We in the business community think that it is far more important to center on trade and investment. Because when a company comes with trade and investment, they come with the infrastructure, they come with training, they come with technology. They come with a whole package which helps make things better over time.

It's like the old Oriental proverb about giving someone a fish, you feed them for a day; teach them to fish, you feed them for a lifetime. We believe that foreign aid is in the first category and trade and investment is in the second category, far more important.

I don't want to go back over on your second question about our goals. I think I've covered that fairly well. We want to share ideas about trade and investment, about markets, and about public policy. And we also are working on a lot of specific things to encourage those end results. And I think we have fairly well covered those. And I don't have a great deal to add.

Other questions. Yes, sir.

QUESTION. [Inaudible].

Dr. LESHER. Mixed. The question is what is our attitude toward EC '92, if I heard you correctly.

Three weeks ago we had a press conference releasing a major document that my staff has prepared to help the American business community really understand everything that's going on in the EC '92.

It is a very, very involved process, industry by industry. And it will be going on for the next several years. So the publication of this major document is the first step. And then we will be publishing a periodical to keep people posted on the changes.

The original fear in the American business community was that EC '92 would become fortress Europe, that they would turn inward and become protectionist. I think we are not so much concerned about that today. It would appear that they are going to reluctantly be opening up in most cases. But that will come as a result of their own deliberations and outside pressure from us and the Japanese and a lot of other people to keep them on that track.

Up here.

QUESTION. Can you tell us what the U.S. expects from Czechoslovakia and do you see any difference between socialism in Sweden and socialism in Czechoslovakia?

Dr. LESHER. Two very, very important questions, but of course, not easy questions to answer.

There are a host of things that—it is not so much what does America expect from Czechoslovakia. If Czechoslovakia does certain things, it will encourage more interaction, more trade, more investment. The more it moves toward markets, the more it moves toward market pricing. Where you have state pricing, you have great difficulties for entering into trade agreements.

Most of Eastern Europe would like to get into the GATT, the General Agreement on Tariffs and Trade. But where you have state pricing, it is very difficult to decide what is subsidized, what is not subsidized, what is a competitive price, what is an unfair price.

So pricing, free markets, mobility of capital and labor, all of those things, the more that we see of the promise that has been made, the better we would expect our relationships to become, a lot of key things there.

With regard to the other question, you're probably in a better position to answer the difference between socialism in Sweden and socialism here. In Sweden, socialism has been held up as the one place where it has really worked. That's what we hear in the West, that's what the journalists say all the time.

Last November, one year ago, they decided it wasn't working so well. They engaged in supply-side tax reductions for the first time because their tax rates had become so high to pay for all these socialized programs, that they were putting down the initiative. And they were actually losing some of their most productive citizens because of the punitive high tax rates.

Because the people go abroad and say I won't go home any more. Even though I love my homeland, I am not going to work and pay 70 or 80 percent of it to the government. The tax rates in Sweden have been as high as 80 percent. So they've lost doctors, scientists, and tennis players, to draw an analogy between the two countries.

Yes, sir.

QUESTION. [Inaudible].

Dr. LESHER. The American Congress—the question is that I didn't mention human rights, and you hope that America will continue to press for human rights.

We will continue to do so. You are quite correct. It is part of our law. And there has been a lot of result. You may not be aware of it, but one of the main concerns of the Congress was the Soviet policy of not allowing the Jewish community to leave Russia. And there was so much in the news when we were arguing that. Now that they are doing it, in huge numbers, it doesn't get in the news.

But those pressures have paid off in that particular instance. And I think that there are some pressures around the world. And we continue to put those pressures on in favor of human rights.

Thank you for that question.

Yes, sir.

QUESTION. [Inaudible].

Dr. LESHER. Dean, you have a very bright group of students here. We keep getting really intelligent questions. And I thank you for that question.

And I'll repeat it for the rest of you. The question is it possible to implement economic reforms without political reforms?

In my opinion, it is possible, but it is not as likely to work unless you do both. The very, very unfortunate situation in Mainland China is a result of trying to do economic reforms in a piecemeal fashion without doing political reforms.

The students in China—it's not even in the newspapers, about some of their problems. They are assigned a major, they are assigned a career when they are very young. They are not allowed to change courses, they are not allowed to change major interest of studies. They have no mobility whatsoever. That was one of the things that the Chinese students were complaining about, and something that could be given to them without a radical reform of their system. But their leaders are unwilling to consider even that small change.

When I was in China in the eighties, I devoted my lecture to that issue. It is important to have mobility of capital and labor in order for free markets to work. So the more that you have of that, the more likely you are for free enterprise to work.

So it is possible to have economic reforms without having political reforms, but it is much better if they go hand in hand. Your government has promised to do both and we would like to see that happen.

Yes, sir.

QUESTION. Do you see Eastern Europe being included in the overall European market?

Dr. LESHER. That Eastern Europe will be included into that overall market, we are optimists. We believe that the rest of the world will encourage the EC to open up to the rest of the world. We think that will happen. We are very confident that they will participate with America because they don't want to lose our market. They don't want to have us engage in retaliation, as we've already done on a couple of occasions when they've tested us.

QUESTION. Mr. President, you have said when countries do not have open societies it could be the fault of the system, the leaders or the people?

Dr. LESHER. The leaders, the system, or the people.

QUESTION. Which one is it in Czechoslovakia?

Dr. LESHER. I have told you over and over and over how highly I prize the Czechoslovakian people. [Applause.]

QUESTION. How can this be improved?

Dr. LESHER. Change, change is happening in Poland because the people want change. Change is happening in Hungary because the people want change. We changed in America in 1980 with our second revolution, throwing out the socialized policies of the sixties and the seventies when Ronald Reagan came to town because the American people wanted change.

The first step in progress is for the people to want change.

I think the changes are real. You might disagree. I think that the change that you've seen to date will be surpassed dramatically in the future. [Applause.]

At the conclusion of the two hour session with over 300 students crammed into an auditorium built to hold about 240, many of the students surrounded Dr. Lesher on the floor of the auditorium and followed him into the outside corridor continuing their questioning about the role they could play to bring about important changes in their system and a better economy to their country. To bring about the human and economic progress about which he spoke.

ILLINOIS FREEMASONS FIGHT DRUG AND ALCOHOL ABUSE

● Mr. SIMON. Mr. President, it is with great pleasure and no small amount of pride that I call my colleagues' attention today to a landmark program that brings Illinois community leaders together with Illinois State government for a common cause. The Illinois Freemason's Grand Lodge, under the leadership of its Grand Master Robert Ford, approached Illinois State government with its offer to help establish community-by-community teacher training programs to identify and intervene with drug and alcohol abuse among Illinois schoolchildren.

As my colleagues know, American Freemasons are, and have been since even before the beginning of the Republic, integral members of America's communities. As such, they are uniquely placed to help with solutions to this problem which is ravaging our families and our society. This community approach is exactly what William Bennett's Drug Control Office, President Bush, and the Congress have been pointing to as a long-term, effective solution to this drug epidemic.

The elected head of the Freemasons of Illinois, Grand Master Robert Ford, in an enlightened example of the community working together with government, met with Illinois Lt. Gov. George Ryan last November to offer the cooperation of Illinois Freemasonry in establishing and supporting a Student Assistance Training Program. This program has been dramatically successful in identifying and intervening with youngsters who are at-risk of using, or beginning to use, drugs and alcohol.

That offer was accepted, and details of the program are now being crafted. Soon, Grand Lodge and State representatives will be chosen to receive initial orientation from Student Assistance Training experts, and an Illinois region will be selected to receive the

first Student Assistance Training week.

The Student Assistant Training Program has been established in several other Masonic jurisdictions in the United States, offering several unique features not found in other programs.

Key to the process is the training of "Core Teams" from individual schools. These teams learn to identify children showing signs of trouble with alcohol and drugs. The teams then receive training in quietly effective intervention techniques. Early returns from other areas where the "Masonic Model" has been instituted are showing dramatic results in reduction of adolescent drug and alcohol abuse. These positive results often extend beyond just the educational setting into the community at large.

Mr. President, it is my strong conviction that if all our institutions and community groups were to engage in this struggle against drug and alcohol addiction in such a singular and concrete way, we could begin to see this country pulling together against this common enemy that is attacking the very foundations of our country. Illinois and the Nation are grateful to the Freemasons of Illinois for launching an effort that, I believe, will soon yield important victories in the war on drugs.●

A BILL TO REVISE THE BOUNDARY OF GETTYSBURG NATIONAL MILITARY PARK

● Mr. HEINZ. Mr. President, I rise to speak on behalf of S. 1594, a bill to revise the boundary of Gettysburg National Military Park. But first, I want to thank the majority leader for taking this important legislation from the calendar and making it one of the first items that the full Senate considers at the beginning of this session of Congress.

Gettysburg holds special significance for this Nation, as much for the outcome of the 3-day battle as for the events that have transpired there since.

Gettysburg marked the high tide of the Confederacy. In the weeks preceding the battle, an energized Confederate Army, confident in its leadership, had undertaken a bold campaign into the North, while an uncertain Union Army under a new commander struggled to block the thrust. European governments were making plans to recognize the Government in Richmond and to provide aid and assistance. At the end of 3 sweltering, bloody, courageous and decisive days of battle, a shattered Southern Army retreated to Virginia. The Northern Army gained new heart. Offers of diplomatic recognition and assistance to the Confederate States evaporated. The tide had turned.

As we were reminded on the 125th anniversary 2 years ago, Gettysburg has come to mean more than just a place of battle. It is also a place of reconciliation. In November 1863, President Abraham Lincoln in his Gettysburg Address, speaking at the dedication of a new national cemetery for the fallen of both sides, eloquently characterized the spirit of this great Nation. Lincoln's Gettysburg Address is one of the most important speeches in our political heritage. Its author understood the terrible cost of battle and the hatreds engendered by war, yet attempted to lay the foundation of shared values upon which a reconciled Nation could be built. Seventy-five years later, in 1938, veterans of both sides returned to Gettysburg and in moving ceremonies found the common ground where enmity is replaced by brotherhood.

Mr. President, we Pennsylvanians are honored to be the custodians of such a significant heritage. We are proud to welcome and host literally millions of visitors to the battlefield every year. However, our ability to preserve and enhance the experience of visiting the national park is threatened. South-central Pennsylvania is experiencing rapid economic growth. Once overwhelmingly rural, the area surrounding Gettysburg has become an attractive place to locate a business and raise a family. The resulting pressure to develop available land could undermine valuable attributes of the park. We are hopeful that our legislation will lead to a fair balance of interests.

Mr. President, currently, Gettysburg National Military Park has only a limited boundary. This bill will codify the National Park Service recommendation to Congress that an expanded legislative boundary for the park be created. This legislation gives to the Secretary of the Interior the power to acquire lands which properly belong within the park, which are historically significant, and which deserve the protection of the National Park Service. It would allow the Secretary to purchase, or if this is not possible, to take appropriate measures to maintain, protect and interpret monuments and tablets commemorating the Battle of Gettysburg which lie outside the boundary of the park. Lastly, the legislation instructs the Interior Secretary to encourage conservation of the battlefield setting at Gettysburg by landowners, local governments, organizations, and businesses through grants, information, and technical assistance.

The new boundary will successfully balance the long-term protection of the park while also taking into account the local concerns and needs of the surrounding community. The new boundary will add approximately 1,900 acres to the park, increasing its size to 5,700 acres. Only 250 of the 1,900 new acres will be added to the park through outright purchase in fee, with the remaining acreage being protected through scenic easements and the purchase of development rights.

Mr. President, this legislation has the support of the local community, historical preservation societies, and the National Park Service. The urgency of this legislation is measured by the quickening pace of development in the area and I ask my colleagues to support this bill.●

BOB KASTEN'S HOUSING ADDRESS

● Mr. MACK. Mr. President, I rise today to draw the attention of my colleagues to an intelligent exposition of American housing policy by my distinguished friend, BOB KASTEN.

Senator KASTEN believes that empowering the people of the inner cities—giving them a choice over their own destiny—is the key to lifting them toward full participation in the American dream. I recommend his insightful and and thought-provoking address to everyone concerned about this important national issue. I therefore ask that it be included in the RECORD.

The remarks follow:

ADDRESS: HOUSING POLICY FOR A NEW DECADE

Thank you very much, Pat. Pat Kerns has been a friend of mine for many years—so I'll forgive him for making his introduction much too kind.

I'd like to offer a special thank you to Bill Lawrence and the people of the Private Industry Council for arranging today's meeting. It's good to see that so many old friends and business and government leaders have joined us here this morning.

All over the world, men and women are discovering liberty. It seems that every week a new and previously inconceivable headline graces the front page of our newspapers: "Soviets To Hold Election." "Berlin Wall Falls." "Romanian Dictator Overthrown."

Today, I'd like to begin by taking you back briefly to England, the birthplace of modern liberties. In England, the principle arose over long centuries that a person's home was his castle—and this home was the seat of personal responsibility, of pride, of citizenship and rights. A man had rights because he had roots.

This principle of home ownership as a safeguard of liberty was transplanted to the American colonies and became a foundation stone of the new United States. For two centuries thereafter, it grew into the very definition of the "American Dream."

How close are we—today—to this ideal? The homeless are roaming our streets. The working poor are scraping with great difficulty to find and pay for affordable housing. And young middle-income Americans are facing a crunch as they try to buy a first home for their new families.

Today, I would like to outline what I think we ought to do to make affordable housing a reality for all these Americans. I'd also like to extend a hand to all those here today who are grappling with this problem on a day-to-day basis. These are challenges that—if we are to overcome

them—we will have to face together, as a community.

I hope we can all agree that, to begin with, the very best housing policy is a sound economic policy. Low interests rates, low inflation rates, low taxes and the availability of jobs with good wages are essential if we want to house America's families.

Over the last decade, we've had some success in this regard. I recently learned that if 1980 trends in inflation, taxes and interest rates had continued, today's average American family would have to pay over $300 more for housing each and every month.

But there are those—and we see them every day—who have been left behind. When I reflect that there are thousands of homeless people right here in Milwaukee, I cannot escape the conclusion that we have to do more. When working poor families are spending 70 percent of their income to pay rent, we have to do more. And when the dream of homeownership recedes into the distance for young middle American families, we have to do more.

The problem so far has not been a lack of financial commitment on the part of the government. Over the last decade, government spending on housing has increased. In 1988, the U.S. Department of Housing and Urban Development spent 21 percent more in inflation-adjusted dollars than it had spent in 1981. In 1989, the number of families who received housing assistance was 40 percent higher than the number who received assistance in 1980.

The problem isn't in our hearts. It's in our programs. And—until our housing policy is effective in action as well as intention—we cannot call it a success.

In short, we need to bring glasnost and perestroika to our nation's housing policy. We need to tell the truth about the problem—and apply some new thinking to its solution.

We must reject the programs that lead to dependency instead of self-sufficiency, that promote self-satisfied and self-protecting bureaucracy instead of individual initiative. We need to tear down the Berlin Wall of bureaucratic indifference and insensitivity—and replace that wall with a window through which enterprise, self-help, and empowerment of individuals can brighten up the community.

We ought to make changes at the Federal and local levels to bring market incentives to housing policy—and make carefully targeted Government spending available to those who need it most.

THE HOMELESS

Let's begin with the homeless. We cannot deal effectively with the problem of the homeless until we come to grips with the fact that mental illness and drug addiction are among its primary root causes. The Urban Institute estimates that 60 percent of America's homeless suffer from severe mental illness or drug dependency. A recent survey of shelter operators on the East Coast indicates that—at least in some cities—the number could be as high as 80 or 90 percent.

America has failed to win the war on homelessness because so much of the help, especially government help, overlooks this important fact. We're losing the war because we're misallocating our resources.

For every homeless person, there are now over 10 vacant housing units. There are more than three million vacant rental units in the United States today—the highest vacancy level in history. Clearly, the problem is not a shortage of housing, but rather a shortage of common sense.

Let's give the homeless what they really need. In the short term, they need shelters. Over the long term—and this is just as important—they need special support services to deal with drug abuse and mental impairment problems. These programs must pay special attention to the needs of the chronic homeless, who need rehabilitation and health care.

I support full funding of the Stuart B. McKinney Act—and I'm proud to report that we have achieved 100-percent funding for the activities of this program here in Wisconsin. I also think that this aid ought to be provided to states and communities in the form of block grants. Too often, states and cities face unreasonable restrictions on how they can use these funds. I think we ought to give Mayor Norquist, County Executive Schulz and others at the local level more leeway to try creative approaches in coping with homelessness.

Each community must pursue a multi-faceted strategy free of Washington-imposed red tape. Non-profit, private-sector, community-based organizations have an important role to play. They're already doing it—I'll say some more about that in a few minutes.

The bottom line on homelessness is empowerment. We have to lift homeless people out of the root afflictions that have made them homeless. We have to lift—and we have to heal. With appropriate attention, the homeless can move on up out of their shelters and welfare hotels—into permanent housing—and into full participation in what America has to offer them.

THE WORKING POOR

From the problem of homelessness, let's move on to the radically different situation afflicting America's working poor. As with the homeless, a misunderstanding of the problem has resulted in costly and ineffective solutions.

Too many people still believe that the cause of the low-income housing crunch is a shortage of housing units. But the facts tell a different story. From 1980 to 1987, America added more than 12 million new units to its housing stock—while adding only 8.7 million new households. In 1987, the total number of housing units vacant all year round was 8.6 million.

So the problem is not in the supply of housing—but in the lack of sufficient income to rent the existing housing units that are currently being wasted. At this point, building still more low-income housing would be like dealing with hunger by opening new grocery stores—instead of just giving poor people the money they need to buy food already available.

What usually happens when a problem is misdiagnosed is that the solution itself becomes a problem. And this has certainly happened in the area of low-income housing.

Federal spending on unnecessary construction has perpetuated the inner-city cycle of social decay and welfare dependency. Since the 1960's, we have spent about a quarter of a trillion dollars on the construction of more than four million low-income housing units. The result has been the de facto segregation of low-income people into blighted and crime-infested neighborhoods. Black activist Robert Woodson has observed that housing projects "have turned into social dumping grounds"—big prisons that serve only to isolate low-income people from the opportunities they need.

We can do better than that. We can create a new approach that reallocates resources into initiatives that directly benefit the working poor. The big developers don't need our money. The influence peddlers and the ex-HUD officials don't need our money. The working poor do need our money if they are going to be able to afford housing.

The great majority of the poor are now renters. Almost half of these renters—a full 45 percent—pay more than 70 percent of their incomes in rent. We have to empower these low-inome families. They need jobs and opportunities—they need self-sufficiency and a stake in their communities.

What they need is housing vouchers. Instead of warehousing low-income people in the ghetto, vouchers allow recipients themselves to decide where they choose to live. Vouchers boost the purchasing power of the poor—and give low-income people the mobility to pursue job opportunities.

Each year, the Federal budget commits $6 billion to various housing-production or rehab programs. Those funds generate fewer than 50,000 housing units annually. That same money—spent on vouchers worth up to $600 per month—would aid one million poor families.

That's a twenty-fold gain. We need vouchers and we need them now.

We also have to implement enterprise zones—federal, state and local initiatives to reduce tax and regulatory barriers to investment in blighted areas. In the states where these enterprise zones have been tried, they have established a proven track record of success—creating an estimated 180,000 jobs and spurring about $9 billion in private investment in low-income areas.

Thanks to Governor Thompson's leadership, we already have eight of these enterprise zones here in Wisconsin—and we need more.

These are private sector jobs, not government make-work jobs—and the small business sector has led the way. The goal of enterprise zones is not to tear down the homes of the poor and replace them with urban industrial parks for wealthy corporations. The goal is to attract small service and manufacturing firms that can blend into—and build-up—the community.

We ought to cut payroll taxes, maybe even eliminate them outright for these businesses. We ought to eliminate the capital gains tax and provide other tax incentives for individuals and banks willing to fund this vital investment.

This investment will further boost the income of low-income housing consumers in the area—and lift them steadily toward self-sufficiency and homeownership.

Also, by renewing the low-income housing tax credit, we can create further incentives for the private construction and rehabilitation of housing for working poor families.

President Bush thinks we ought to tie this housing tax credit to our proposed across-the-board capital gains cut. I disagree with him. I think low-income housing is too important to be held hostage in this manner. The capital gains cut is important too—and we'll have the votes to pass it. But we should pass the housing tax credit right now—no matter what.

We have to promote homesteading and tenant management—giving low-income residents of federally insured and subsidized housing the opportunity to buy their own homes. When residents acquire an equity stake in the future of their building, in the future of their neighborhood, they develop a more constructive and responsible atti-

tude—and they urge their neighbors to do likewise. During the last five years, over half a million dwellings have been sold to public housing tenants in Britain, and we've had a number of success stories here in the U.S. as well.

We also have to start turning over FHA foreclosures to nonprofit groups—because these groups can turn board-ups into build-ups. Today, I am announcing that I will introduce legislation to increase the supply of low-income housing to nonprofit groups. My bill would eliminate the capital gains tax for the sale of privately-held low-income housing to qualified non-profits, charities, and public housing authorities. This will provide an important incentive to preserve the existing stock of low-income housing—which might otherwise be converted to office buildings or shopping malls.

Another creative new initiative is Operation Bootstrap. Under this program, which I was proud to help Secretary Kemp push through Congress, the recipients of low-income housing aid will also be provided with the services they need in order to achieve upward mobility: Job training. Child care. Transportation.

Over the next five years, Operation Bootstrap will provide more than $2.6 million in federal funds to community-based, public-private efforts to move low-income people toward self-suffiency. Jack Kemp has high hopes for this program, and so do I—because it opens up the ladder of economic advancement to the people who need it most.

The City of Milwaukee will be a flagship for this new program. City officials, the Private Industry Council and all concerned Milwaukee citizens have a stake in its success—because America is looking to Milwaukee for leadership.

The government has an important role in this. But we mustn't forget that the ultimate solution will come from the people themselves—from their desire to fulfill their immense potential and to make a contribution to our national mosaic.

LOOKING FOR A FIRST HOME

We must now confront the problems of first-time homebuyers. Largely because today's consumers are demanding bigger, better-quality homes, new homes today are becoming more and more expensive. Our incomes have risen since the 1950's, but the increased tax burden has eaten up over half of the gains in our purchasing power.

We have to continue to bring down that tax burden. We cannot allow it to destroy the chances of young Americans to finance their first homes.

But we can do more. I support legislation allowing first-time homebuyers to draw, without penalty, on IRA savings as a down payment for that first home. Of course, many young people haven't had the opportunity to build up IRAs—so I think we should expand this concept to the parents of these would-be homebuyers.

A third of first-time buyers depend on family assistance to supplement their savings—and I think allowing parents to contribute in this way would be a big help.

We also have to refocus the Federal Housing Administration on the needs of first-time homebuyers. Some would have us raise the FHA loan limit to 95 percent of median house prices. That sure doesn't help first-time homebuyers—how many of them are buying those expensive houses?

I think the FHA needs to stop bankrupting the system—and to get back in touch with the needs of middle-income Americans.

President Bush and Secretary Kemp have unveiled a pathbreaking new plan to help make housing more affordable to everyone. Project HOPE stands for "Homeownership and Opportunity for People Everywhere." And the HOPE plan provides incentives for state and local governments to cut through the terrifying tangle of local zoning regulations, complex building codes, and rent controls. These regulations can add as much as 25 percent to house prices—and that doesn't help.

I'll support that measure vigorously, because the Housing Opportunity Zones it will create will bring the dream of homeownership closer to reality for many low- and moderate-income Americans.

WORKING TOGETHER

The goal of all the measures I am proposing here today is restoring power to the people. America will be adequately housed when we realize that individual freedom works—that if we give people a choice and a chance, they will succeed.

Even in the pages of Pravda—the chief newspaper of Communist Russia—this truth is being recognized and admitted. A Soviet lawyer named A. Movye recently published an article in that newspaper in which he argued that the government ought to get out of the business of running public housing. He wrote that if people own their own apartments, housing availability will increase and tenants will be more mobile. Referring to a Kremlin decree that mandated the building of new housing stock, he asks, and this is a direct quote: "But where should they be built? In what cities? . . . No planning or other agency is in a position to make such an accounting in a huge country."

End of quote. And if they can't do it there—we sure can't do it here.

So the success of housing policy will not—cannot—be a success of government officials. It must be a success of people—people working together to make Wisconsin and American better places to be. Individuals, the private sector, the non-profits—these will be the backbone of victory.

Look what generous and courageous people have already accomplished. Right here in Milwaukee, the YWCA is operating a transitional housing program for women. With some help from volunteers, local businesses, and private industry—and funding from Community Development Block Grants and the McKinney Act—they've been able to provide 17 apartments to give shelter, social services and job training to women in need.

Up in Medford, Wisconsin, the Hurd Millwork Company is setting aside 50 cents for every window and patio door its clients specify in their architectural plans—and they're sending that money to a homeless-support program called The Search For Shelter.

The Wheaton Fransiciscans have opened Project HOPE here in Milwaukee—a plan to rehabilitate boarded-up houses and turn them into affordable housing.

These non-profit efforts point the way toward the future. They are genuine participants in what President Bush calls "the thousand points of light." And I think Federal assistance ought to focus on support for this kind of heart-felt, community-based initiative.

Today, I would like to call on Wisconsin's business leaders to lend a hand. Through tax cuts, deregulation, and other pro-growth economic measures, we've put Wisconsin business back in business and back on top. In this time of plenty, let us all remember that we are one community—and that the future will always judge a society on how it treated its poorest members.

I am optimistic—because Wisconsin has always been a progressive state, willing to try new ideas and new approaches. We know how valuable our human resources are. That's why we have an education system that's second to none.

Let's take that spirit of investment in people—and harness it to lift all Americans towards homeownership and a down payment on the American Dream.●

COMMENDING STUDENTS AT LOVELOCK ELEMENTARY SCHOOL

● Mr. BRYAN. Mr. President, I rise today to congratulate the sixth grade classes of Mrs. Cindy Myers, Mrs. Martha Harrington, and Mrs. Dana Hodges at Lovelock Elementary School in Lovelock, NV.

These outstanding young men and women have raised more than $8,700 for the installation of an emergency telephone system for Pershing County, NV. This service will undoubtedly provide needed care for the citizens of Pershing County for years to come, perhaps saving the lives of many.

Through bake sales and private solicitations, these young people were able to raise money for this service. In the process of making this service possible, they not only raised the morale of the community, but proved to themselves that they can reach their goals—that they can accomplish whatever they set out to do.

In an age where drugs have trampled the dreams of so many young men and women, and dampened public confidence in the next generation, their actions have shown what our children can accomplish. Congratulations to them, both for the results they have achieved, and the example they have set for Nevada and the Nation. I am very proud of each one of them.●

DESCRIPTIVE VIDEO SERVICE

● Mr. KENNEDY. Mr. President, I would like to call my colleagues' attention to a very exciting project that is being launched today by WGBH, a public television station in Boston. Beginning with this evening's episode of "American Playhouse," thousands of visually impaired individuals in over 30 media markets will have greater access to television programs they are viewing through a new project entitled "Descriptive Video Service."

Descriptive Video Service allows visually impaired viewers to understand the plot of a television program through a narrated explanation of the program's visual elements. During breaks in the dialog, the narrator will explain settings and scene changes,

along with a detailed description of the characters.

The service was made possible by the development of stereo television in 1984. Through the separate audio program channel available on stereo television, viewers can push a button on their television set to receive these special broadcasts. WGBH test marketed this service from 1986 to 1988, and it proved to be so successful that plans were made to expand on a nationwide basis.

I have viewed a tape of how Descriptive Video Service works, and it is truly an impressive achievement. WGBH was a leader in developing captioning for the hearing impaired over 20 years ago, and I commend the station for continuing their tradition of service to the community and the Nation through this new development.

Descriptive Vide Service will expand in March to include the PBS series "Mystery!" "American Playhouse" and "Degrassi High" will follow in the near future. Plans are already underway to expand the service to commercial television.

I also commend Dr. Barry Cronin, who developed Descriptive Video Services, and Laurie Everett, who through her hard work and dedication made Descriptive Video Service a reality. Important financial assistance was provided by the Corporation for Public Broadcasting and the National Endowment for the Arts. These individuals and organizations deserve great credit for making Descriptive Vide Service a reality for thousands of visually impaired individuals.●

WORLD SUGAR MARKET

● Mr. INOUYE. Mr. President, I wish to bring to the attention of my colleagues an article on the sugar industry which appeared in the December/January issue of Farmline, a U.S. Department of Agriculture publication of the Economic Research Service. We so frequently read attacks on the sugar program from both within and outside our Government by people who have very limited knowledge of the program and the industry. It is indeed refreshing to find a balanced and informative article from an authoritative source.

As you know, the 1990 farm bill will be before us this year. The sugar program is an essential part of the farm bill and I am confident that your understanding of the need for and the merits of that program will be enhanced by reading this article. Mr. President, I hereby request that it be placed in the RECORD.

The article follows:

[From Farmline, December 1989–January 1990]

SUGAR PRODUCERS, USERS COULD GAIN A FAIRER MARKETPLACE

Trade barriers that have long protected the sugar industry worldwide and in the United States are being reevaluated, both in the U.S. Congress and in the 97-nation General Agreement on Tariffs and Trade (GATT). The outcome may be a freer market for the heavily traded commodity.

Sugar, produced in about 100 countries, is one of the world's most traded and protected food commodities, says economist Annette Clauson of USDA's Economic Research Service. Sugar is an ingredient in most food items and plans an essential role in the food chain. It is also an important source of revenue to most countries. Therefore, the concern for, and protection of, sugar is worldwide.

"Most major sugar-producing countries maintain more than one sugar policy to protect their producers and consumers from market price fluctuations," says the economist. Such programs include domestic and import price controls, export controls and subsidies, minimum prices to farmers, and production quotas. The current U.S. sugar program includes import controls and a minimum price to producers.

"Sugar, historically, has been one of the most volatile of all commodity markets," says Clauson. For example, monthly world raw sugar prices have ranged from 2.7 cents to 41.1 cents per pound in the 1980's. "When supplies are low, prices rise sharply, impacting consumers. Conversely, when supplies are high, prices are severely depressed, impacting producers. One factor that cannot be controlled is the weather, making harvested acreage, yields, and sugar recovery rates unpredictable from year to year," says the economist.

ERS analysts say that quotas (restricted imports) are necessary to protect domestic sugar producers from competition with world sugar when prices are depressed. The U.S. program maintains a domestic price for raw sugar high enough to avoid defaults on processors' Commodity Credit Corporation (CCC) loans.

"Only about a quarter of world sugar is traded in international markets, and an even smaller amount, about 15 percent, is currently traded at world prices. This is an important point, since many people believe that unlimited quantities of sugar can be bought at the 'world price.' In reality, world-priced sugar is a small uncommitted amount that is sold for whatever price it might bring," says Clauson.

Consumers pay the cost of world sugar protection at different rates, depending on where purchases are made. Little of the sugar traded in the world market is sold at world market prices, says Clauson. Almost all is sold at prices reflecting the domestic sugar policies of the trading countries.

For example, according to a survey conducted by U.S. agricultural attachés in 1988, sugar prices varied significantly in each country. In Canada, where world market sugar is available, the government provides a guaranteed return to growers in the form of income support payments. Retail prices in Ottawa were low, about 17 cents per pound, although prices varied and averaged 29 cents a pound in other cities, according to a Canadian government survey. At the other end of the spectrum, in Japan, which has substantial duties, sugar sold at 89 cents a pound. The U.S. maintains a price support program protected by import quotas, and the price to consumers in 1988 averaged 38 cents per pound.

Sugar-exporting nations have criticized the United States for maintaining its sugar-import restrictions, including a formal challenge brought by Australia through the GATT dispute settlement process against the allegedly improper implementation of U.S. import quotas. The European Community also filed a complaint through the same GATT process against the United States for its use of the Section 22 authority of the Agricultural Adjustment Act of 1933 to impose import restrictions on sugar-containing products.

IMPLICATIONS OF GATT PROPOSALS

GATT negotiators have debated proposals to restructure and decrease trade distorting agricultural subsidies. In April 1989, GATT negotiators reached framework agreement. Clauson says that although no major issues were resolved, the language appears flexible and strong enough to suggest substantive long-term reductions in import barriers, supports, and subsidies.

The framework agreement did not include specific language on the level of reductions or a schedule for such reductions. Since agriculture will be one of the toughest resolution areas, says Clauson, trade negotiators are expected to propose more specific intentions by January 1, 1990. Trade negotiators plan to discuss long-term reform proposals and complete the negotiations by late November or early December 1990 in the Uruguay round.

Clauson points out that the language on import access and support levels in the framework agreement works within the scope of its members' existing legislation, and their existing rights and obligations as members of GATT. For the short term the language of the agreement ensures that:

"Current domestic and export support and protection levels are not exceeded, except as required by current law."

For the United States, the current 18-cent per pound loan rate specified in the 1985 farm bill could not be increased and additional protection measures and import quota restrictions could not be added, except under existing legislation.

Clauson explains that the U.S. sugar program offers nonrecourse loans for raw cane sugar and refined beet sugar. A price objective, called the Market Stabilization Price, and the quotas on imported sugar allow a domestic price to be maintained that encourages processors to redeem loan collateral, rather than to forfeit the sugar to the federal government.

"Participants shall be deemed to be in compliance with this undertaking so long as the access opportunities granted to individual products in 1989 and 1990 are not less than those granted in 1987 and 1988."

Clauson says the wording is unclear on whether the intent is the maximum, minimum, or some average. If some averaging method is used, the U.S. raw/refined sugar import quota levels in 1989 and 1990 would not be reduced below the combined 1987 level of 1.0 million short tons and the 1988 level of 1.06 million short tons. The escape clause, "within the scope of existing legislation," permits reduction of the import quota level if necessary to avoid forfeitures of sugar to the CCC.

"Support prices to producers are not raised above the level prevailing at the date of this decision."

This means that the 18-cent loan rate for sugar cannot be increased in the short term. Changes in support limitations and access restrictions beyond 1990 will likely be dictated by the Uruguay round.

One of the changes in import quotas of sugar committed to the United States was announced in September 1989. The quota

(for all exporting countries) was increased from 1,125,255 metric tons, raw value, to 1,986,950. Also announced was a 9-month extension of the quota period (until September 30, 1990). This change puts quota shipments for the 21-month period at a somewhat higher level on a 12-month equivalent basis than the previously announced quota of 1,125,255 metric tons.

When announcing the changes, Secretary of Agriculture Clayton Yeutter said, "We are continuing to look at the options for bringing quotas into conformity with the GATT, but a decision on how to do this has not been made. In the interim, this modification of the import quota and the quota period is necessary to correct for a tightness in our sugar market, particularly during the last quarter of this calendar year."

LONG-TERM GOALS

Long-term goals will require that GATT negotiators provide a fair environment for sugar trade, says Clauson. Industry spokesmen attending the April 1989 GATT negotiations in Geneva offered the following opinions:

While the United States is an average cost world producer, the United States and most other sugar-producing countries cannot compete with the usually lower priced excess sugar placed on the world market.

Clauson explains that world sugar production increased by about 30 percent from 1975 through 1988/89. The largest exporting regions—the Caribbean, the European Community, Australia, and Central/South America—together had 16.5 million metric tons of excess sugar to trade in 1988/89.

Multilaterally eliminating protectionist policies and restraining countries from dumping sugar at depressed prices on the world market will need to be addressed, say the industry spokesmen.

Congress will review sugar price support levels and market access issues during the 1990 farm bill debate. The U.S. government wants farm program changes that produce a more market-oriented agriculture, and these changes will likely include risks and incentives for producers. Because of budget constraints, speculate industry spokesmen, there will likely be no increased support levels for commodities in the 1990 farm bill.

The sugar program's current no-cost provisions require the avoidance of accumulations of sugar by the CCC. Adjusted for inflation, the 18-cent loan rate set in 1985 is actually 15.5 cents today. U.S. sugar producers and processors have had to increase efficiency to offset the loss.

In the opinion of industry spokesmen, U.S. policy during the transition period, while protectionist policies are being removed worldwide, might include one or more of the following: marketing allocations by factory or mill, acreage reductions and quotas, a reduction of the loan rate, a tariff-quota system, and a two-price system for domestic sugar that includes marketing a fixed quantity at a guaranteed price and excess sugar at the world price.

After all protectionist policies are removed worldwide, the world price for sugar should effectively fluctuate around a level that covers all production, processing, and milling costs in most major producing countries. Such a level, say the industry spokesmen, would be considerably above current prices.

The length of transition periods, currency fluctuations, and social, health, and safety requirements for U.S. workers versus other developed and developing country workers are specific topics requiring further discussion by GATT negotiators when moving from short-term to long-term agreements.

The heavy protection in international sugar markets makes reducing all trade barriers for sugar a major undertaking for GATT negotiators," says Clauson.

[Based on information provided by economist Annette Clauson of the Commodity Economics Division, Economic Research Service.]

WILL TIGHTER SUPPLY SPUR THE DRIVE TO LIFT CONTROLS ON SUGAR?

Sugar, one of the world's most traded food commodities, "could be headed for a bull market," says ERS sugar analyst Peter Buzzanell. In 1989, tight supplies and increasing prices characterized the world market.

Contributing to the tight market were major cutbacks in Brazil's exports because of its automobile fleet's sugar-based ethanol demand, and the USSR's entrance into the world market because its Cuban sugar source had become unreliable, says the economist. Also, Mexico and Indonesia made unusually heavy purchases and there was considerable market speculation that India would enter the market.

The increase in sugar consumption in most countries is outpacing production, chipping away at world stocks. This year (1989/90), world sugar production, forecast at a record 106.75 million metric tons raw value, is nearly 2 million tons less than consumption. Sugar consumption is forecast to rise 1 percent in 1989/90 to a record 108.72 million tons, and exceed production for the fifth straight year. If so, global stocks will be their lowest since 1980/81.

Internal problems in Brazil and Cuba had the greatest effect on the sugar market in 1989, says Buzzanell. Brazil, normally the third largest sugar exporter, sold only 1.37 million tons in the world market, its lowest sales since 1975/76. Brazil's exports to the United States so far have been less than one-quarter of what we usually get from them.

Internal demand for cane in Brazil is high, says Buzzanell. Brazil's new fleet of cars, produced in-country, require ethanol fuel. Brazil diverted two-thirds of its cane production to manufacture the fuel.

Also, Brazil is privatizing all sugar exports, eliminating its Sugar and Alcohol Institute's monopoly on marketing. However, the Institute has been made responsible for setting export quotas to guarantee that domestic sugar needs are met and that only excess production is available for export.

The USSR's imports are tied to Cuba's problem with foreign exchange. Traditionally, about half of Cuba's sugar is exported to the USSR. In 1988, about 20 percent of Cuba's remaining export sugar was sold to China, 15 percent to other East European countries, and 18 percent to other countries.

Seventy-five percent of Cuba's foreign exchange comes from its sugar trade. Problems with insufficient inputs to improve the industry slowed production growth, resulting in reductions in exportable surpluses to nonsocialist markets. Cuba is caught in a "vicious cycle," say ERS economists, because these markets are the main sources of foreign exchange needed to buy capital goods to improve Cuba's sugar industry.

In an effort to increase its foreign exchange, Cuba overcommitted sugar sales to countries other than the USSR in 1989. As a result, Cuba had to postpone several shipments to Japan, its most important nonsocialist export market, and it bought substantial amounts of sugar on the open market to fulfill its commitment to the USSR. Currently Cuba is an unreliable source for the Soviets, says Buzzanell, causing the USSR to open its refined and raw sugar market to other exporters.

Consumer demand for sugar in the USSR is very high, says the economist. The Soviets have one of the highest per capita sugar consumption rates in the world. Sugar is just behind grain as the USSR's major import.

Despite assertions earlier in 1989 that their buying was over, the Soviets were very active in purchasing 300,000 tons of refined sugar and 200,000 tons of raw sugar. Buzzanell says they needed the imports to service the traditional surge in summer demand and perhaps to offset supply tightness because of smaller-than-expected domestic output and lagging supplies from Cuba.

Other pivotal countries affecting the world sugar trade are:

CHINA

Prospects that China would reenter the market in a big way last summer as it did in 1988 did not materialize, says Buzzanell. While total imports for 1988/89 are estimated at 3.0 million tons, it appears that the Chinese government has been drawing down stocks rather than expanding imports, says the economist. In part, this may reflect a lack of foreign exchange for imports as well as working off excessive stocks. China is likely to remain the world's second largest sugar importer after the USSR.

INDIA

The sugar production forecast was reduced nearly 5 percent in 1988/89 as a larger-than-expected amount of sugarcane was diverted from sugar mills to traditional nonmill uses. This reduced output implies that India could be a significant net importer in 1989/90 for the first time in 3 years.

THAILAND

The striking production performance of Thailand transformed the country from a minor sugar exporter to the world's third largest in 1988/89.

Buzzanell says that the Thai industry is likely to be the important moderating factor to the potential run-up in world sugar prices during 1989/90.

World sugar prices were more volatile than usual in 1989. But the moderating influence on the world market are prospects in the coming months of improved beet sugar output in Western Europe, the Soviet Union, and Eastern Europe, and cane sugar from Australia and Thailand.●

FIGHTING DENIAL OF THE ARMENIAN GENOCIDE

● Mr. SIMON. Mr. President, Mr. Van Krikorian, Director of Government and Legal Affairs at the Armenian Assembly of America, delivered an excellent paper on December 21, 1989, to the Capitol Legal Council of B'nai B'rith, entitled "Fighting Denial of the Armenian Genocide." Mr. Krikorian takes issue with the arguments that have been put forward against the Armenian Genocide Resolution, Senate Joint Resolution 212. It is my hope that we can pass this resolution early this year, so that Armenian Americans can have this commemorative in hand by April 24, 1990—the

date of the 75th anniversary of the Armenian Genocide.

I commend Mr. Krikorian's paper to my colleagues, and I ask that it be printed in the RECORD in full.

The article follows:

FIGHTING DENIAL OF THE ARMENIAN GENOCIDE

(By Van Z. Krikorian)

In the spring, you heard a speech from a Turkish Embassy official contending that the Armenians did not suffer a genocide between 1915 and 1923. That contention is patently false. But, Turkey's and its agents' insistence on vigorously pursuing it poses a frightening threat to all people who believe in democracy and human rights. Make no mistake, those who are denying the Armenian genocide today are paving the way for those who deny other genocides and for those who will undoubtedly plan future episodes of race extermination. I am sure you are aware that Hitler publicly laid the foundation for the Holocaust by referring to "the extermination of the Armenians" starting, at least, in 1931 and most forcefully in 1939 when he commanded his military to show no mercy by asking: "Who, after all, speaks today of the annihilation of the Armenians?"

Those who deny the Armenian Genocide are removing the underpinnings of all human progress by pretending that nothing exists which, for whatever reason, they do not want to exist. This approach is often viewed as politically expedient. But, in the end, it only aborts the cause of civilization.

This is why I am especially glad to address you this afternoon and to publicly challenge the arguments of the deniers. I am also glad to know that the Holocaust Memorial Council has publicly and unequivocally committed to include the Armenian genocide in the United States Holocaust Memorial Museum, a decision which rebukes the deniers and promotes historical integrity.

Today, I plan to discuss some of the reasons why the Armenian genocide is properly classified as a genocide and then refute some of the more popular arguments offered by the Turkish government and other deniers.

First of all, what does the term genocide mean? Literally, it means the killing of a race. An attorney and Holocaust survivor, Rafael Lemkin, coined the term in 1944 and then dedicated himself to creating and promoting the United Nations Genocide Convention. Before, during, and after coining the term, Lemkin used the Armenian case as a definitive example of genocide. In Lemkin's view, it would be impossible to question whether the Armenians suffered a genocide, because the term was created to be a synonym with the Armenian experience.

Similarly, the United Nations legislative history of the Genocide Convention is clear that the Armenian case is an example of genocide, a position from which the United Nations has not moved. In the United States, the legislative history of ratifying the Genocide Convention and the implementing legislation is equally clear that the Armenian case is synonymous with the term genocide. These legislative histories, of course, merely reflect the overwhelming evidence of the Armenian genocide. Yet, the deniers argue that the Armenian case somehow does not fit the definition of genocide.

The Genocide Convention provides:

"Genocide means any of the following acts committed with intent to destroy, in whole or in part, a national, ethnical, racial or religious group, as such:

"(a) Killing members of the group;

"(b) Causing serious bodily or mental harm to members of the group;

"(c) Deliberately inflicting on the group conditions of life calculated to bring about its physical destruction in whole or in part;

"(d) Imposing measures intended to prevent births within the group;

"(e) Forcibly transferring children of the group to another group."

No one realistically questions whether Ottoman Turkey engaged in the specific acts enumerated in this definition. That would be absurd because the Armenian population of over two million was unquestionably reduced to under 100,000, and those people did not simply disappear—they were killed, forcibly converted to Islam, and, in small numbers, escaped.

What the deniers question is whether the government committed the acts with the intent to destroy the Armenian presence in their homeland of three thousand years. This contention is shamefully absurd.

I cannot go over all the admissions and evidence establishing beyond any doubt that the government planned and implemented a campaign of race extermination, but the archives of the United States and almost every European country (including the Central Powers, Turkey's allies) are overflowing with this evidence. Today, I would like to call your attention to the following pieces of evidence: (1) a December 1914 authenticated blueprint for genocide issued by the ruling Committee of Union and Progress Party which can be found in the British archives; (2) the post World War I, Turkish trials and convictions (based on substantial, irrefutable testimonial and documentary evidence) of the government officials responsible for ordering and implementing the extermination of the Armenians; (3) a November 8, 1920 order for the military to exterminate the Armenians living in Russia; (4) and the acknowledgment of the Armenian genocide by the founder of modern Turkey, Kemal Ataturk.

The December 1914 order reads as follows:

"(1) Profiting by Articles 3 and 4 of Committee Union and Progress, close all Armenian Societies, and arrest all who worked against Government at any time among them and send them into the provinces such as Bagdad or Mosul, and wipe them out either on the road or there.

"(2) Collect arms.

"(3) Excite Moslem opinion by suitable and special means, in places as Van, Erzeroum, Adana, where as a point of fact the Armenians have already won the hatred of the Moslems, provoke organized massacres as the Russians did at Baku.

"(4) Leave all executive to the people in provinces such as Erzeroum, Van, Mamuret ul Aziz, and Bitlis, and use Military disciplinary forces (i.e. Gendarmerie) ostensibly to stop massacres, while on the contrary in places as Adana, Sivas, Broussa, Ismidt, and Smyrna actively help the Moslems with military force.

"(5) Apply measures to exterminate all males under 50, priests and teachers, leave girls and children to be Islamized.

"(6) Carry away the families of all who succeed in escaping and apply measures to cut them off from all connection with their native place.

"(7) On the ground that Armenian officials may be spies, expel and drive them out absolutely from every Government department or post.

"(8) Kill off in an appropriate manner all Armenians in the Army—this to be left to the military to do.

"(9) All action to begin everywhere simultaneously and thus leave no time for preparation of defensive measures.

"(10) Pay attention to the strictly confidential nature of these instructions, which may not go beyond two or three persons."

In fact, these orders basically describe the actual pattern of the genocide. Of course, during implementation, the ruling party issued additional orders on massacring Armenians (I will share another with you shortly) as well as orders to punish those Turks who showed mercy to the Armenians.

The post-war trials are also dispositive not only for their indictments and verdicts, but also for the overwhelming evidence used to secure the verdicts. Specifically, both central and provincial government officials were tried and convicted for the "massacre and destruction of the Armenians." Besides a major trial in Istanbul, moreover, local trials for the same crimes, which have yet not been widely publicized, also took place. (Parenthetically, I would add here that these trials were cited as precedent for the Nuremberg trials following World War II.)

Next, I would like to share a November 8, 1920 central government order, quoted from a Turkish source. This order commanded General Kazim Karabekir to essentially continue the job of exterminating the Armenians after World War I by wiping out the Russian-Armenian population:

"By virtue of the provisions of the Sevres Treaty Armenia will be enabled to cut off Turkey from the East. Together with Greece she will impede Turkey's general growth. Further, being situated in the midst of a great Islamic periphery, she will never volunarily relinquish her assigned role of a despotic gendarme, and will never try to integrate her destiny with the general conditions of Turkey and Islam.

"Consequently, it is indispensable that Armenia be eliminated politically and physically [siyaseten ve maddenten ortadan kaldirmak].

"Since the attainment of this objective is subject to [the limitations of] our power and the general political situation, it is necessary to be adaptive in the implementation of the decision mentioned above [tevfiki icraat]. Our withdrawal from Armenia as part of a peace settlement is out of the question. Rather, you will resort to a modus operandi intended to deceive the Armenians [Ermenileri igfal] and fool the Europeans by an appearance of peacelovingness. In reality, however, [fakat hakikatde] the purpose of all this is to achieve by stages the objective [stated above]. . . . [I]t is required that vague and gentle-sounding words [mubhem ve mulayim] be employed both in the framing and in the application of the peace settlement, while constantly maintaining an appearance of peacelovingness toward the Armenians.

"[t]hese instructions reflect the real intent [makasidi hakikiyesi] of the Cabinet. They are to be treated as secret, and are meant only for your eyes."

Again, documents like these as well as direct admissions of guilt by the government officials are literally everywhere.

Recognizing that indisputable fact, Kemal Ataturk, the founder of modern Turkey, did not hesitate to condemn the responsible Ottoman government for its actions. In an interview published August 1, 1926 in the Los Angeles Examiner, he said that all those responsible "should have been made

to account for the lives of millions of our Christian subjects who were ruthlessly driven en masse from their homes and massacred." Today, the Turkish government has called the authenticity of this quote into question. Yet this 1926 statement was not an isolated event. In 1918, Ataturk called for the execution of the genocide's perpetrators. In 1919, as recorded by a presumably unimpeachable source, future Turkish prime minister Raul Orbay, Ataturk acknowledged the government's massacres "of 800,000 Armenians" and "decried the extermination of the Armenians." In a 1920 speech, Attaturk explicitly condemned the massacres as "scandalous." Again, this type of documentation is indisputable and overwhelming, but we still face those who act as if it does not exist. When such denials are funded from a country as important as Turkey, we face the prospects of the Nazi operating principle: "a lie told 1,000 times becomes the truth."

Accordingly, I would next like to refute the predominate arguments used by the deniers today. Let me start with one that the embassy official who spoke here in the spring touted as dispositive—"It was not a systematic effort to kill all Armenians [because] no harm was done to the Armenian communities living outside the war zone—in Istanbul, the Ottoman capital, for example." Initially, I would note that this argument is as fallacious as saying that Jews did not suffer a genocide because they were relatively safe in Rome and Bulgaria. But, more importantly, the factual assertion is not true.

Armenians certainly were exterminated in Istanbul and every other part of Turkey, and it was clearly systematic. For example, on December 7, 1915 German Ambassador Metternich informed Berlin that the government had wiped 30,000 Armenians out of Istanbul and that "gradually a clean sweep will be made of the remaining 80,000 Armenian inhabitants of the Ottoman capital." Indeed, the government massacred or tried to massacre all Armenians from European Turkey by first shipping them over the Bosporous and then killing them. One example is the eradication of the Armenians from the European town of Rodosto. In fact, Armenians and their friends commemorate the genocide on the anniversary of April 24, 1915 because on that date the government gave the clearest signal of systematic race extermination. It arrested and killed hundreds of unquestionably innocent Armenian community leaders (including legislators, clergy, educators, and attorneys) in Istanbul.

Another argument which the deniers forward is that Armenians died of natural causes (famine, cholera, diseases), not government ordered massacres. Putting aside all the direct evidence of the genocide, this argument is ridiculous. It would be the first time, that I know of, in which famine and disease moved from town to town across an entire country removing all but less than 100,000 Armenians from over 2,000,000 and leaving the Turkish Moslem population as the sole survivors. Frankly, such a "selective disease" argument has no historical or scientific credibility, and those who make the argument must not expect their audience to reflect on its merits very deeply.

But, the deniers argue that there was also a great civil war in which Armenians took up arms against Turks. In that supposed war, great, mutual killings occurred. Never mind that the government had disarmed all the Armenians, the government drafted all the able-bodied Armenian men into labor battalions of the army where they were massacred, and contemporaneous reports do not reference any civil war. In fact, in a newly published book, "The Slaughterhouse Province," we can read American consul Davis's official, eyewitness report from the interior of Turkey of the disarming of the Armenians and the lack of any real resistance. He reports that after the massacres of Armenians in the Province of Harput (ultimately over 100,000), the government could "find only four or five instances where any Turks had been killed or even injured by Armenians and less than a dozen instances of any resistance by Armenians." In other isolated areas, of course, Armenians fought back against Turks. But, these were either minor incidents; self-defense; or because Armenians were Russian citizens, drafted into the Russian army, and were a part of the Allied war effort fighting Ottoman Turkey. As Ambassador Morgenthau reported as early as July 1915, moreover, allegations of rebellion were only "a pretext" for "a campaign of race extermination."

Nevertheless, some people still claim that the massive Armenian deaths resulted from the legitimate quashing of a rebellion. This "pretext" or "legitimate basis" denial argument is probably the most dangerous. If it is accepted (regardless of its inaccuracy), it sanctions the murder of an entire nation based on the prodemocracy cries of only a few groups. Civilization will not progress if a justification claim can be made in defense of genocide. Otherwise, the Nazis and every subsequent perpetrator would build the defense in as the crime was committed. During the Armenian genocide, the government attempted exactly such a defense, and it was rejected as both inaccurate and immoral by the international community as well as the succeeding Turkish government. There is no reason why it should be accepted now.

A more slippery denial argument on the "mutual killings" theme involves the amount of Turks and Moslems who also died in the war. I call this argument slippery because its proponents slide between "Turkish" and "Moslem" deaths. For example, some point to "two million Turkish deaths during the war" as a reason not to sympathize with Armenians. Yet this two million figure includes the 1.5 million Turkish-Armenians killed, the over 300,000 Turkish army casualties, and the tens of thousands of Turkish-Greeks and Arabs put to death at the same time.

Another strand of this argument points to "hundreds of thousands of Moslem deaths"—again implying that the genocide was really an Armenian-Turkish war. Yet in calculating the "Moslem" figures, these people not only include the Turkish war casualties and the massacres of tens of thousands of Arabs in Turkey, but also the Moslems who died fighting with the Allies against the Turks in the Middle East—that is Moslems which the Turks themselves killed.

A third strand of this "numbers game" argument applies artificial formulas to the nineteenth century populations, plugs in some theoretical conditions, and concludes with ridiculous population and mortality figures which bear no relation to reality. This argument falls on its face because it completely ignores the direct, factual evidence of the genocide. Its proponents are as off base as those who recently claimed in the newspaper "Sieg" that only 150,000-200,000 Jews died under Nazi rule and those deaths came during the "German-Jewish war."

Another denial theme is that commemorating or recognizing the Armenian genocide promotes terrorism. Initially, let me say that we unequivocally condemn all terrorism, including Armenian terrorist attacks on innocent Turks. But, the threat of terrorism does not justify rewriting history to deny Ottoman Turkey's crimes against humanity. More importantly, and again the deniers conveniently fail to mention this fact, Armenian terrorism is a moot point. In a March 1989 report, even the State Department had to acknowledge that there has not been an Armenian terrorist attack in three or four years and Armenian terrorist groups have withered away. This cessation of terrorism is attributed to lack of mainstream Armenian community support and to the growing international rejection of Turkey's denial campaign. For example, in 1985 the United Nations Subcommittee on Human Rights, after years of study, overwhelmingly recognized the Armenian genocide as an indisputable historical fact, and in 1987 the European Parliament conditioned Turkey's acceptance to the European Community on recognizing the Armenian genocide.

The following denial argument is particular to deniers in the United States. They point out that in 1985 sixty-nine scholars signed an advertisement questioning the accuracy of a Congressional resolution commemorating the armenian genocide and therefore "there was no Armenian genocide" or "the issue should be left to historians"—an argument from authorities so to speak. Following the advertisement, we contacted these sixty-nine people. We found that some did not authorize use of their names on the advertisement and some said they were misled about the text and apologized. Many explicitly recognize the Armenian genocide as a fact. But, most importantly, we found that only four of the sixty-nine actually focus their work on the time span of 1915-1923. All of these individuals are subsidized by the Republic of Turkey, and none has credibility on the Armenian genocide issue. Thus, when deniers make claims like a majority of United States experts question the Armenian genocide, they are simply not telling the truth. Among those sociologists, attorneys, historians, psychologists, anthropologists, political scientists, and others who seriously study genocide, there is no question that the Armenians suffered a genocide, by any definition. There is also no question among the credible genocide scholars that failure to memorialize and condemn past genocides facilitates future genocides.

Before leaving this "scholars" issue, however, I would like to make clear that some of those people who signed the 1985 advertisement and continue to question the Armenian genocide really have little choice. These people are Turkish or Ottoman historians. If they do not assume the current government's line, they will be cut off from resources necessary for their life's work. Even Turkish sources confirm that cooperation with the government pays dividends while criticism exacts a high price.

The next denial argument is one of the more interesting. This argument contends that a judgment on the Armenian genocide must be reserved until the Republic of Turkey opens its archives of the period. The argument is interesting because Armenians sought free access to the Ottoman archives for years. Then the irrelevance of these archives became obvious. For instance, Turkey does not even own all the relevant archives from the period. After the War, the govern-

ment sold hundreds of thousands of its records to the Bulgarians as scrap paper. Other parts of the archives exist in Jerusalem, the Soviet Union, the Middle East, and Europe. In addition, after World War I, Turkish officials readily acknowledged that the files on Armenian massacres were removed and destroyed. In fact, the documentation in archives around the world contains more direct evidence of the genocide than we can possibly digest. (The United States archives contain approximately 25,000 pages for the period 1915–1918 alone, including captured German records, which fully document the genocide.) So, while the Turkish held archives may be interesting, they are only a very minor contribution to the history of the genocide.

Moreover, Turks themselves acknowledge that military and foreign service officials have been reviewing the records for years to remove whatever incriminating evidence may still exist and that the government is using the archives strictly for public relations purposes. This year, the government, in various ways, has announced that the archives on Armenian issues are open. Yet, they fail to publicize that the wrong achives are open or the restrictions which prevent any incriminating documents from coming to light. For example, in January, they announced that the archives are open, but they did not open the relevant World War I years. Recently, they announced that the Council of Ministers files were open for the war years, but they did not open the records of the party apparatus or other agencies which actually controlled the genocidal operations. (Scholars have found that the genocide was implemented through a two track system of orders—one set ordering "deportations" and another set ordering the translation of "deport the Armenians" to "massacre the Armenians.") Read these continual announcements on the opening of the archives carefully; you will find that there is always a caveat such as "all previously catalogued archives are open" or that a researcher may see only fifteen pages at a time and a government official has the right to screen the documents first. The Turkish government continues to use the archives as a delaying tactic. As Cumhuriyet a Turkish newspaper reported in January 1989:

"Endless and empty statements have been made over the years concerning the opening of the Ottoman archives, and it is creating a disturbance among those who follow this topic closely. For the last 8 years, every 6 months a statement is made regarding the opening of the Ottoman archives. That these don't come true indicates that Turkey is pursuing a policy of distraction."

At this point, the Ottoman archives held by Turkey are worthless. This explains why only Turcophiles and the uninitiated place any weight on them. It also explains why the archives' administrators publicly complain that serious scholars have not come to review what has been released.

The last denial argument I would like to touch on is a "character" argument—that is, "Turks are hospitable, good people" and good people would not do what the Armenians allege happened under Ottoman reign. Let me say that the character of the Turkish people is not at issue here. Turkish hospitality is well known, and many Turks proved their sense of humanity during the genocide by protecting individual Armenians. That does not change what the government did to the Armenians from 1915 to 1923, the fact that the racist ideology of Pan-Turkism (Turket only for Turks) was and still is prevalent, or that the government continues to have a poor human rights record and severely discriminates against Armenians in Turkey today.

You should also know that the 1915–1923 Armenian genocide was not an isolated event. From 1894 to 1896, Sultan Abdul Hamid openly and proudly ordered the massacre of hundreds of thousands of Armenians, ostensibly to send the Armenians a message about their place in Turkish society. Lord Kinross gave the following example of the atrocities in this period:

"[The Massacre's] objective based on the convenient consideration that Armenians were now tentatively starting to question their inferior status, was the ruthless reduction, with a view to elimination of the Armenian Christians, and the expropriation of their lands for the Moslem Turks. Each operation, between the bugle calls, followed a similar pattern. First the Turkish troops came into a town for the purpose of massacre; then came the Kurdish irregulars and tribesmen for the purpose of plunder. Finally came the holocaust, by fire and destruction, which spread, with the pursuit of the fugitives and mopping-up operations, throughout the lands and villages of the surrounding province. This murderous winter of 1895 thus saw the decimation of much of the Armenian population and the devastation of their property in some twenty districts of eastern Turkey. Often the massacres were timed for a Friday, when the Moslems were in their mosques . . . Cruelest and most ruinous of all were the massacres at Urfa, where the Armenian Christians numbered a third of the population . . . When the bugle blast ended the day's operations, some three thousand refugees poured into the cathedral, hoping for sanctuary. But the next morning—a Sunday—a fanatic mob swarmed into the church in an orgy of slaughter, rifling its shrines with cries of 'Call upon Christ to prove Himself a greater prophet than Mohammed.' Then they amassed a large pile of straw matting, which they spread over the litter of corpses and set alight with thirty cans of petroleum. The woodwork of the gallery where a crowd of women and children crouched, wailing with terror, caught fire, and all perished in the flames. Punctiliously at three-thirty in the afternoon the bugle blew once more, and the Moslem officials proceeded around the Armenian quarter to proclaim that the massacres were over . . . the total casualties in the town, including those slaughtered in the cathedral, amounted to eight thousand dead."

Similar accounts of massive Armenian massacres during this 1894-1896 period abound. In 1909, for similar reasons, the government set another prelude to the 1915-1923 genocide. Then, it ordered and carried out massacres in Adana which killed 30,000 Armenians.

Today, as I have noted, the Turkish government is engaged in an all out effort to deny the Armenian genocide. In addition to its efforts in the United States, it is eradicating the physical evidence of any Armenian existence in Turkey. At the beginning of this century Armenians had two thousand churches in Turkey. Now under two hundred are standing. As for the rest, the government has: destroyed them; converted them to mosques, warehouses, cinemas, and other uses; or allowed them to be plundered and destroyed. In Armenian schools, Armenians are forbidden to teach history and geography, those subjects can only be taught by Turkish officials. As a final example, Turkey strictly forbids open discussion of Armenian history or any other matters which do not comply with government policy. In March of this year, the Independent Magazine reported that:

"In early December 1986 Hilda Hulya Potuoglu was arrested by the Turkish Security Police and charged with 'making propaganda with intent to destroy or weaken national feelings.' The prosecutor of the Istanbul State Security deemed her offense as meriting severe punishment and asked for between a seven-and-a-half and a 15-year jail sentence.

"Potuoglu's crime was to edit the Turkish edition of the Encyclopedia Britannica. In this was included a footnote which read as follows: 'During the Crusades the mountainous reigions of Cilicia were under the hegemony of the Armenian Cilician kingdom' . . .

"The Encyclopedia Britannica was not the first publication to offend. In 1981 the authorities seized Ankara 50, a guidebook to Ankara produced by the British Institute of Archaeology. The book, when published in 1973, had been passed by the military censor. By 1981, however, times had changed. It was noticed that the book featured a map naming the Roman provinces of Asia Minor including—with perfect historical accuracy—the province of Armenia. The guidebook quickly joined the index of forbidden books along with other such politically dubious publications The Time Atlas of World History and the National Geographic Atlas of the World."

This is the type of action that the Turkish government and those in the United States who deny the Armenian genocide are promoting—the sacrifice of truth and integrity on the altar of perceived political expedience. This is why I am especially glad to have had this time with you today, to publicly expose exactly what we are all up against in fighting denial of the Armenian genocide. Thank you.

HUMAN LIFE AMENDMENT TO THE CONSTITUTION

● Mr. GARN. Mr. President, this past Monday people from all over our country on both sides of the abortion issue descended on the Nation's Capitol on the 17th anniversary of the Supreme Court decision in Roe versus Wade.

However, unlike on other anniversaries, pro-lifers have new encouragement due to the Supreme Court Webster versus Reproductive Health Services decision. The Webster ruling is narrow in that it applies only to Missouri, but it does set the stage for other States to pass more restrictive measures regulating abortion. This is certainly a move in the right direction.

In what appears to be an attempt to further resolve the abortion issue, the Supreme Court has agreed to hear three other abortion cases. One addresses permissible regulation of private abortion clinics and two concern parental notification. All three regard State laws having the effect of creating obstacles to the access of first-trimester abortions. Perhaps Webster is a signal that the Court is now prepared to uphold State restrictions on abortion that have been ruled uncon-

stitutional for 16 years, many by lower courts. At the very least, Webster assures that the abortion debate will continue to dominate both the judicial and political agenda.

Although the Webster decision is a victory for abortion opponents, it has fanned the flame of determination of abortion rights advocates throughout the country that the right to abortion on demand must not be altered. That makes the task of stopping this taking of innocent, voiceless lives even tougher and the efforts of pro-lifers even more important.

Last January, I again introduced, for the seventh consecutive Congress, a human life amendment to the Constitution. Senate Joint Resolution 3 states that "with respect to the right to life, the word 'person' as used * * * in the Fifth and Fourteenth amendments to the Constitution * * * applies to all human beings, irrespective of age, health, function, or condition of dependency, including their unborn offspring at every stage of their biological development." The amendment goes on to say, "No unborn person shall be deprived life by any person: *Provided, however,* That nothing in this article shall prohibit a law permitting only those medical procedures required to prevent the death of the mother."

The Supreme Court in Roe versus Wade indicated that the Constitution never specifically defines "person" but that in most sections where "person" appears * * * the use of the word is such that it has application only postnatally. None indicates, with any assurance, that it has any possible prenatal application." My amendment addresses this and I will continue in this regard, until we return to a correct interpretation of the Constitution which protects the rights of all human life.●

THE FUTURE OF OUR SOCIETY

● Mr. HUMPHREY. Mr. President, human life is precious, both inside and outside the womb. In my opinion, nobody understands this better than Kevin and Linda Cross. In a January 17, 1989 letter to the editor of the Eagle Times of Claremont, NH, Kevin writes about the untimely and tragic death of their son Matthew. It is my hope that those who favor the killing of prenatal infants take the time to read Kevin's letter.

Mr. President, I ask that this letter be placed in the RECORD.

The letter follows:

THE FUTURE OF OUR SOCIETY IS AT STAKE

To the EDITOR:

Across our nation, churches will be celebrating "Sanctity of Human Life Sunday" on Jan. 21. The concern for life in America will be one of the major issues for the nineties. From abortion to euthanasia, how we determine the meaning of life now will affect our nation in the next century.

As a citizen of the United States and a minister by profession, it is my responsibility to know and care for life. The Bible and the Constitution provide a right to life for all persons. Yet how do we determine when life begins? Let me share a personal experience.

When my wife Linda became pregnant, we were delighted. We dreamed many things for our child. When our baby was seven weeks old in the womb, we saw through an ultrasound the body and heart beat of this little "fetus."

Then my wife began to bleed. Our doctor monitored the growth of our child in the womb for the next seven weeks. But at 14 weeks in the womb, my wife miscarried. As I saw a little five-inch baby boy delivered at the hospital, I both marveled and cried. The detail of our little child at only 14 weeks in the womb was incredible—fingers, toes, a complete body. Yet he was too small to live.

Fortunately our nurse was very compassionate. She asked if we wanted to hold our baby, whom we named Matthew. We did, and we sobbed. We held a funeral several days later, although many couldn't understand why. But if they could have just seen the child we held in our hand for those few minutes, they would know why we grieved so.

Nothing can bring Matthew back to life, but we can seek to save those who will be lost to both abortion and euthanasia. It is imperative that we as a nation strive to preserve the dignity of human life, whether in the womb or in the nursing home. My experience has shown me that life is sacred, from beginning to end. Please decide for yourself where we as a nation will draw the line to life. The future of our society is at stake.

KEVIN P. CROSS,
Claremont, NH.●

SUSPENSION OF PARAGRAPH 2 OF RULE XXVI

Mr. MITCHELL. Mr. President, I ask unanimous consent that paragraph 2 of rule XXVI, requiring the printing of committee rules in the CONGRESSIONAL RECORD by March 1 of this year, be suspended for those committees who have not made changes in their rules.

The PRESIDING OFFICER. Without objection, it is so ordered.

ANNIVERSARY OF VOLUNTEERS IN SERVICE TO AMERICA

Mr. MITCHELL. Mr. President, I ask unanimous consent that the Senate proceed to the immediate consideration of Calendar Item No. 426, House Concurrent Resolution 228, relating to the 25th anniversary of Volunteers in Service to America.

The PRESIDING OFFICER. The concurrent resolution will be stated by title.

The assistant legislative clerk read as follows:

A concurrent resolution (H. Con. Res. 228) expressing the sense of the Congress regarding the 25th anniversary of Volunteers in Service to America.

The PRESIDING OFFICER. Is there objection to the immediate consideration of the concurrent resolution?

There being no objection, the concurrent resolution (H. Con. Res. 228) was considered and agreed to.

The preamble was agreed to.

Mr. MITCHELL. Mr. President, I move to reconsider the vote by which the concurrent resolution was agreed to.

Mr. DOLE. I move to lay that motion on the table.

The motion to lay on the table was agreed to.

MEASURES INDEFINITELY POSTPONED

Mr. MITCHELL. Mr. President, I ask unanimous consent that Calendar Nos. 27, 217, and 336 be indefinitely postponed.

The PRESIDING OFFICER. Without objection, it is so ordered.

THE CALENDAR

Mr. MITCHELL. Mr. President, I ask unanimous consent that the Senate proceed to the immediate consideration of Calendar Nos. 428, 429, 430, 431, and 432, en bloc; that the committee amendments were appropriately agreed to en bloc; that the bills be deemed read a third time and passed, and the motion to reconsider the passage of these bills be laid upon the table; and that the title amendment, where appropriate, be agreed to.

The PRESIDING OFFICER. Without objection, it is so ordered.

REVISION OF BOUNDARIES OF GETTYSBURG NATIONAL MILITARY PARK

The Senate proceeded to consider the bill (S. 1594) to revise the boundary of Gettysburg National Military Park in the Commonwealth of Pennsylvania, and for other purposes, which had been reported from the Committee on Energy and Natural Resources, with amendments as follows:

(The parts of the bill intended to be stricken are shown in boldface brackets, and the parts of the bill intended to be inserted are shown in italic.)

S. 1594

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled,

SECTION 1. GETTYSBURG NATIONAL MILITARY PARK BOUNDARY REVISION.

(a) LANDS INCLUDED IN THE PARK.—In furtherance of the purposes of the Act entitled "An Act to establish a national military park at Gettysburg, Pennsylvania", approved February 11, 1895 (16 U.S.C. 430g et seq.), the Gettysburg National Military Park (hereafter in this Act referred to as the "park") shall hereafter comprise the lands and interests in lands within the boundary generally depicted as "Proposed Park Boundary" on the map entitled "Proposed Boundary [Concept", numbered NPS

305/80034, and dated , 198 , which shall be on file and available for] *concept", numbered NPS 305/80034-A, and dated November, 1989, which shall be on file and available for* public inspection in the Office of the Director of the National Park Service, Department of the Interior.

(b) LANDS EXCLUDED FROM THE PARK.—Lands and interests in lands outside of the boundary so depicted as "Proposed Park Boundary" on the map referred to in subsection (a) are hereby excluded from the park and shall be disposed of [under section 2(o).] *in accordance with the provisions of subsection 2(c).*

SEC. 2. ACQUISITION AND DISPOSAL OF LANDS.

(a) GENERAL AUTHORITY.—The Secretary is authorized to acquire lands and interests in lands within the park by donation, purchase with donated or appropriated funds, exchange, or otherwise.

(b) AUTHORITY TO CONVEY FREEHOLD AND LEASEHOLD INTERESTS WITHIN PARK.—The Secretary may convey lands and interests in lands within the park authorized in accordance with [section 5(a) of the Act approved July 15, 1968 (16 U.S.C. 4601-22,) *subsection (a) of the Act of July 15, 1968 (16 U.S.C. 4601-22),* except that, notwithstanding subsection (d) of that section, the net proceeds from any such conveyance [may be retained and used] *may be used, subject to appropriations,* to acquire lands and interests within the park.

[(c) CONVEYANCE OF LANDS EXCLUDED FROM PARK.—In acquiring lands and interest in lands within the park, the Secretary may convey by exchange those Federal lands and interests excluded from the park by section 1. If any such Federal lands and interests are not so conveyed after five years after the date of enactment of this Act, the Secretary may sell any or all such lands and interests to the highest bidder and, notwithstanding any other provision of law, retain and use the net proceeds to acquire lands and interests within the park.]

(c) CONVEYANCE OF LANDS EXCLUDED FROM PARK.—The Secretary is authorized, in accordance with applicable existing law, to exchange Federal lands and interests excluded from the park pursuant to subsection 1(b) for the purpose of acquiring lands within the park boundary.

(2) If any such Federal lands or interests are not exchanged within five years after the date of enactment of this Act, the Secretary may sell any or all such lands or interests to the highest bidder, in accordance with such regulations as the Secretary may prescribe, but any such conveyance shall be at not less than the fair market value of the land or interest, as determined by the Secretary.

(3) All Federal lands and interests sold or exchanged pursuant to this subsection shall be subject to such terms and conditions as will assure the use of the property in a manner which, in the judgment of the Secretary, will protect the battlefield setting. Notwithstanding any other provision of law, the net proceeds from any such sale or exchange shall be used, subject to appropriations, to acquire lands and interests within the park.

(d) RELINQUISHMENT OF LEGISLATIVE JURISDICTION TO PENNSYLVANIA.—With respect to any lands over which the United States exercises exclusive or concurrent legislative jurisdiction and which are excluded from the park [by section 1,] *pursuant to subsection 1(b),* the Secretary may relinquish to the Commonwealth of Pennsylvania such exclusive or concurrent legislative jurisdiction by filing with the Governor a notice of relinquishment to take effect upon acceptance thereof, unless otherwise provided by the laws of the Commonwealth.

SEC. 3. AGREEMENTS WITH RESPECT TO MONUMENTS AND TABLETS LOCATED OUTSIDE PARK BOUNDARY.

The Secretary is authorized to enter into agreements with the owners of property outside the boundary of the park on which have been erected historic monuments and tablets commemorating the Battle of Gettysburg. The Secretary may make funds [available] *available, subject to appropriations,* for the maintenance, protection, and interpretation of such monuments and tablets pursuant to such agreements. [In addition, the Secretary may] *In addition, within the area depicted as the "Battlefield Setting" on the map referred to in subsection 1(a), or in proximity thereto, the Secretary may, with the consent of the owner,* acquire, by donation, purchase, or exchange, lands and interests comprising such monuments and tablets together with lands and interests necessary to provide adequate public access thereto.

SEC. 4. CONSERVATION OF HISTORIC SETTING.

The Secretary shall take appropriate action to encourage conservation of the battlefield setting at Gettysburg by landowners, local governments, organizations, and businesses. The Secretary shall give priority in making grants under section 101(d), and in providing technical assistance, information, and advice under section 101(h), of the National Historic Preservation Act (16 U.S.C. 470a(d), (h)) to programs and activities that will assure development and use of natural and cultural resources in a manner that is consistent with the conservation and maintenance of the historic character of the battlefield setting. The Secretary shall also provide, [on a request basis,] *on request,* technical assistance to assist local governments in cooperative efforts which complement the values of the park and battlefield and to help landowners prepare individual property plans which meet landowner and conservation objectives in the area known as the "Battlefield Setting" as depicted on the map referred to in [section] *subsection* 1(a).

SEC. 5. AUTHORIZATION OF APPROPRIATIONS.

There are authorized to be appropriated such sums as may be necessary to carry out the provision of this Act.

The PRESIDING OFFICER. The question is on agreeing to the committee amendment.

The committee amendment was agreed to.

The PRESIDING OFFICER. The question is on the engrossment and third reading of the bill.

The bill was ordered to be engrossed for a third reading and was read the third time and passed.

S. 1594

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled,

SECTION 1. GETTYSBURG NATIONAL MILITARY PARK BOUNDARY REVISION.

(a) LANDS INCLUDED IN THE PARK.—In furtherance of the purposes of the Act entitled "An Act to establish a national military park at Gettysburg, Pennsylvania", approved February 11, 1895 (16 U.S.C. 430g et seq.), the Gettysburg National Military Park (hereafter in this Act referred to as the "park") shall hereafter comprise the lands and interests in lands within the boundary generally depicted as "Proposed Park Boundary" on the map entitled "Proposed Boundary concept", numbered NPS 305/80034-A, and dated November, 1989, which shall be on file and available for public inspection in the Office of the Director of the National Park Service, Department of the Interior.

(b) LANDS EXCLUDED FROM THE PARK.—Lands and interests in lands outside of the boundary so depicted as "Proposed Park Boundary" on the map referred to in subsection (a) are hereby excluded from the park and shall be disposed of in accordance with the provisions of subsection 2(c).

SEC. 2. ACQUISITION AND DISPOSAL OF LANDS.

(a) GENERAL AUTHORITY.—The Secretary is authorized to acquire lands and interests in lands within the park by donation, purchase with donated or appropriated funds, exchange, or otherwise.

(b) AUTHORITY TO CONVEY FREEHOLD AND LEASEHOLD INTERESTS WITHIN PARK.—The Secretary may convey lands and interests in lands within the park authorized in accordance with subsection (a) of the Act of July 15, 1968 (16 U.S.C. 4601-22), except that, notwithstanding subsection (d) of that section, the net proceeds from any such conveyance may be used, subject to appropriations, to acquire lands and interests within the park.

(c) CONVEYANCE OF LANDS EXCLUDED FROM PARK.—(1) The Secretary is authorized, in accordance with applicable existing law, to exchange Federal lands and interests excluded from the park pursuant to subsection 1(b) for the purpose of acquiring lands within the park boundary.

(2) If any such Federal lands or interests are not exchanged within five years after the date on enactment of this Act, the Secretary may sell any or all such lands or interests to the highest bidder, in accordance with such regulations as the Secretary may prescribe, but any such conveyance shall be at not less than the fair market value of the land or interest, as determined by the Secretary.

(3) All Federal lands and interests sold or exchanged pursuant to this subsection shall be subject to such terms and conditions as will assure the use of the property in a manner which, in the judgment of the Secretary, will protect the battlefield setting. Notwithstanding any other provision of law, the net proceeds from any such sale or exchange shall be used, subject to appropriations, to acquire lands and interests within the park.

(d) RELINQUISHMENT OF LEGISLATIVE JURISDICTION TO PENNSYLVANIA.—With respect to any lands over which the United States exercises exclusive or concurrent legislative jurisdiction and which are excluded from the park pursuant to subsection 1(b), the Secretary may relinquish to the Commonwealth of Pennsylvania such exclusive or concurrent legislative jurisdiction by filing with the Governor a notice of relinquishment to take effect upon acceptance thereof, unless otherwise provided by the laws of the Commonwealth.

SEC. 3. AGREEMENTS WITH RESPECT TO MONUMENTS AND TABLETS LOCATED OUTSIDE PARK BOUNDARY.

The Secretary is authorized to enter into agreements with the owners of property outside the boundary of the park on which have been erected historic monuments and tablets commemorating the Battle of Gettysburg. The Secretary may make funds available, subject to appropriations, for the

maintenance, protection, and interpretation of such monuments and tablets pursuant to such agreements. In addition, within the area depicted as the "Battlefield Setting" on the map referred to in subsection 1(a), or in proximity thereto, the Secretary may, with the consent of the owner, acquire, by donation, purchase, or exchange, lands and interests comprising such monuments and tablets together with lands and interests necessary to provide adequate public access thereto.

SEC. 4. CONSERVATION OF HISTORIC SETTING.

The Secretary shall take appropriate action to encourage conservation of the battlefield setting at Gettysburg by landowners, local governments, organizations, and businesses. The Secretary shall give priority in making grants under section 101(d), and in providing technical assistance, information, and advice under section 101(h), of the National Historic Preservation Act (16 U.S.C. 470a(d), (h)) to programs and activities that will assure development and use of natural and cultural resources in a manner that is consistent with the conservation and maintenance of the historic character of the battlefield setting. The Secretary shall also provide, on request, technical assistance to assist local governments in cooperative efforts which complement the values of the park and battlefield and to help landowners prepare individual property plans which meet landowner and conservation objectives in the area known as the "Battlefield Setting" as depicted on the map referred to in subsection 1(a).

SEC. 5. AUTHORIZATION OF APPROPRIATIONS.

There are authorized to be appropriated such sums as may be necessary to carry out the provisions of this Act.

PETROGLYPH NATIONAL MONUMENT ES TABLISHMENT ACT

The Senate proceeded to consider the bill (S. 286) to establish the Petroglyph Monument in the State of New Mexico, and for other purposes which had been reported from the Committee on Energy and Natural Resources, with an amendment to strike all after the enacting clause and insert in lieu thereof the following:

That (a) this Act shall be cited as the Petroglyph National Monument Establishment Act of 1989".

(b) The Congress finds that—

(1) the nationally significant Las Imagines National Archeological District on Albuquerque's West Mesa Escarpment contains more than fifteen thousand documented prehistoric and historic petroglyphs;

(2) this district also contains approximately 65 other archeological sites;

(3) the West Mesa Escarpment and the petroglyphs are threatened by urbanization and vandalism, and hundreds of petroglyphs have already been destroyed;

(4) the State of New Mexico has shown great leadership by recognizing the importance of the archeological resources of the West Mesa Escarpment through the establishment of the Las Imagines National Archeological District;

(5) the city of Albuquerque has played a significant role in the preservation of the natural, cultural, and recreational resources of the West Mesa Escarpment;

(6) the Middle Rio Grande Pueblo Tribes have shown a strong and sincere interest in preservation of their heritage through protection of the West Mesa Escarpment;

(7) the Atrisco Land Grant, now held by Westland Development Co., Inc., a corporation whose stock is owned primarily by heirs of the Atrisco Land Grant, has played a significant role in the settlement of the West Mesa area since the grant's formation in 1692 and has shown a strong interest in the preservation of their traditional lands;

(8) the National Park System has no unit established for the specific purpose of protecting, preserving, and interpreting prehistoric and historic rock art; and

(9) in light of the national significance of the West Mesa Escarpment and the petroglyphs and the urgent need to protect the cultural and natural resources of the area from urbanization and vandalism, it is appropriate that a national monument be established in the West Mesa Escarpment area, near Albuquerque, New Mexico.

SEC. 2. (a) In order to preserve, for the benefit and enjoyment of present and future generations, that area in New Mexico containing the nationally significant West Mesa Escarpment, the Las Imagines National Archeological District, a portion of the Atrisco Land Grant, and other significant natural and cultural resources, to provide for the interpretation of such resources, and to facilitate research activities associated with the resources, there is hereby established the Petroglyph National Monument (hereinafter referred to as the "monument") as a unit of the National Park System. The monument shall consist of approximately 7,274 acres including the Atrisco, Boca Negra, and Piedras Mercadas Units as depicted on the map entitled "Boundary Map, Petroglyph National Monument", numbered NM-PETR-80,010 and dated January 1989, which shall be on file and available for public inspection in the offices of the National Park Service, Department of the Interior, in the offices of the Department of Energy, Minerals, and Natural Resources of the State of New Mexico, in the office of the mayor of the city of Albuquerque, New Mexico.

(b) The monument shall be administered by the Secretary or, where appropriate, by the Secretary in cooperation with the State of New Mexico (hereinafter referred to as the "State") and the city of Albuquerque, New Mexico (hereinafter referred to as the "city"), in accordance with section 4 of this Act.

(c) Within 6 months after the enactment of this Act, the Secretary shall file a legal description of the monument designated under this section with the Committee on Energy and Natural Resources of the United States Senate and with the Committee on Interior and Insular Affairs of the United States House of Representatives. Such legal description shall have the same force and effect as if included in this Act, except that the Secretary may correct clerical and typographical errors in such legal description and in the map referred to in subsection (a) of this section. The legal description shall be on file and available for public inspection in the offices of the National Park Service, Department of the Interior, in the offices of the Department of Energy, Minerals, and Natural Resources of the State of New Mexico, in the office of the mayor of the city of Albuquerque, New Mexico, and in the monument office: Provided, That the Secretary may from time to time, after completion of the plan referred to in section 5(a) of this Act, make minor adjustments to the boundary by publication of a revised map or other boundary description in the Federal Register.

SEC. 3. (a) Within the boundary of the monument, the Secretary is authorized to acquire lands and interests in lands by donation, purchase with donated or appropriated funds, exchange, or transfer from any other Federal agency, except that lands or interests therein owned by the State or a political subdivision thereof may be acquired only by donation or exchange.

(b) Where the surface and subsurface estates of private land to be acquired are separately owned, the Secretary shall acquire the subsurface estate to such land prior to or at the same time the surface estate is acquired: Provided, That this subsection shall not be applicable if the Secretary determines that the prior acquisition of the surface estate is necessary—

(1) to prevent damage to the resources of the monument; or

(2) to properly manage and interpret the monument in accordance with section 2.

(c) The Secretary may exchange lands within the area described on the map referred to in section 2 as the Piedras Mercadas Unit for lands owned by the city within the area described on the map referred to in section 2 as the Atrisco Unit. The Secretary may exchange lands within the area described on the map referred to in section 2 as the Boca Negra Unit for lands owned by the State within the area described on the map referred to in section 2 as the Atrisco Unit. Exchanges shall be on the basis of equal value, and either party to the exchange may pay or accept cash in order to equalize the value of the properties exchanged.

(d) It is the intent of Congress that the lands referred to in section 2 be administered in perpetuity as a unit of the National Park System. If any portion of the monument consisting of lands acquired from Westland Development Co., Inc., pursuant to this Act is ever deauthorized as a unit of the National Park System, the Secretary of the Interior, within one year from the date of such deauthorization, shall offer to sell such portion to Westland Development Co., Inc., its successor in interest, or assigns, for the amount that the Secretary paid for the land, adjusted in accordance with the Consumer Price Index: Provided, That such amount may not exceed the fair market value of the land. If such offer is not accepted within 90 days of the date of the offer, the Secretary may dispose of the lands as provided by applicable law.

(e) Prior to acquiring fee simple ownership of private lands or interests therein within the boundaries of the monument, the Secretary is authorized to acquire an appropriate interest in such land by donation or for a nominal fee from its owners for the purpose of providing immediate protection against trespass and vandalism and initiating any resource inventories necessary to carry out the purposes of this act.

SEC. 4. (a) The Secretary shall administer, manage, and protect the monument in accordance with the Act of August 25, 1916, (39 Stat. 535; 16 U.S.C. 1 et seq.), the Act of August 21, 1935 (49 Stat. 666; U.S.C. 461 et seq.), and this Act, and in such manner as to preserve, for the benefit and enjoyment of present and future generations, its cultural and natural resources, and to provide for interpretation of and research on such resources.

(b) The Secretary is authorized to enter into cooperative agreements with either the State or the city under which the Secretary

may manage and interpret any lands owned by the State or the city, respectively, within the boundaries of the monument.

(c) In order to encourage a unified and cost effective interpretive program of the natural and cultural resources of the West Mesa Escarpment and its environs, the Secretary is authorized to enter into cooperative agreements with other Federal, State, and local public departments and agencies, Indian tribes, and nonprofit entities providing for the interpretation of these resources. Such agreements shall include, but need not be limited to, provision for the Secretary to develop and operate interpretive facilities and programs on lands and interests in lands outside the boundaries of the monument, with the agreement of the owner or administrator thereof. Such cooperative agreements may also provide for financial and technical assistance for the planning and implementation of interpretive programs and minimal development related to those programs.

(d) The Secretary may participate in land use and transportation management planning conducted by appropriate local authorities for lands adjacent to the monument and may provide technical assistance to such authorities and affected land owners for such planning.

(e) Nothing in this Act shall be construed as authorizing or requiring revocation of any interest or easement for existing electric transmission or distribution facilities or prohibiting the operation and maintenance of such facilities within or adjacent to the boundaries of the monument.

SEC. 5. (a) Within 3 years from the date funding is made available for the purposes of this section, the Secretary, in cooperation with the city and the State, shall develop and transmit to the Committee on Energy and Natural Resources of the United States Senate and the Committee on Interior and Insular Affairs of the United States House of Representatives, a general management plan for the monument consistent with the purposes of this Act, including but not limited to—

(1) a statement of the number of visitors and types of public use within the monument which can be accommodated in accordance with the protection of its resources;

(2) a general interpretive program;

(3) a plan to implement the joint resolution entitled "American Indian Religious Freedom", approved August 11, 1978 (42 U.S.C. 1996); and

(4) a general development plan for the monument, including proposals for a visitors' center, and the estimated cost thereof.

(b) The management plan shall be prepared in consultation with the Petroglyph National Monument Advisory Commission, established pursuant to section 7, appropriate Indian tribes and their civil officials, the heirs of the Atrisco Land Grant, the New Mexico State Historical Preservation Office, and other interested parties.

(c) The Secretary shall undertake research on other Rio Grande style rock art sites on Federal lands in New Mexico and provide the Committee on Energy and Natural Resources of the United States Senate and the Committee on Interior and Insular Affairs of the United States House of Representatives, within 3 years of the date funding is made available for the purposes of this section, a report that—

(1) lists various locations of Rio Grande style rock art;

(2) identifies the condition of the resources; and

(3) identifies the appropriate type of technical assistance needed for the protection and care of these resources.

The report shall be updated and transmitted to such committees every 2 years thereafter.

SEC. 6. In recognition of the past use of the monument by Indian people for traditional cultural and religious purposes, the Secretary shall insure nonexclusive access to the monument by Indian people for such traditional cultural and religious purposes, consistent with Public Law No. 95-341 (42 U.S.C. 1996). As part of the plans prepared pursuant to section 5, the Secretary, in consultation with appropriate Indian tribes and their civil officials, shall define the past cultural and religious uses of the monument by Indian people.

SEC. 7. (a) There is established the Petroglyph National Monument Advisory Commission (hereinafter referred to as the "Commission"). The Commission shall be composed of 10 members appointed by the Secretary for terms of 5 years as follows:

(1) one member, who shall have professional expertise in history or archaeology, appointed from recommendations submitted by the Governor of the State of New Mexico;

(2) one member, who shall have professional expertise in history or archaeology, appointed from recommendations submitted by the major of the city of Albuquerque, New Mexico;

(3) one member, who shall have professional expertise in Indian history or ceremonial activities, appointed from recommendations submitted by the All Indian Pueblo Council;

(4) one member who shall be a shareholder of the Westland Development Co., Inc.;

(5) one member who shall be an heir of the Atrisco Land Grant;

(6) one member who shall be an affected land owner;

(7) one member who shall have professional expertise in geology;

(8) one member who shall have professional expertise in Indian rock art;

(9) one member from the general public; and

(10) the director of the National Park Service, or his or her designee, ex officio.

(b) Any member of the Commission may serve after the expiration of his term until his successor is appointed. A vacancy in the Commission shall be filled in the manner in which the original appointment was made.

(c) Members of the Commission shall serve without pay. While away from their homes or regular places of business in the performance of services for the Commission, members of the Commission shall be allowed travel expenses, including per diem in lieu of subsistence, in the same manner as persons employed intermittently in Government service are allowed expenses under section 5703 of title 5, United States Code.

(d) The Chair and other officers of the Commission shall be elected by a majority of the members of the Commission to serve for terms established by the Commission.

(e) The Commission shall meet at the call of the Chair or a majority of its members, but not less than twice annually. Five members of the Commission shall constitute a quorum. Consistent with the public meeting requirements of section 10 of the Federal Advisory Committee Act (5 U.S.C. App.), the Commission shall, from time to time, meet with persons concerned with Indian history and historic preservation and with other interested persons.

(f) The Commission may make such bylaws, rules, and regulations as it considers necessary to carry out its functions under this Act. Section 14(b) of the Federal Advisory Committee Act (5 U.S.C. App.) shall not apply to the Commission.

(g) The Commission shall advise the Secretary on the management and development of the monument and on the preparation of the plan referred to in section 5(a) of this Act. The Secretary, or his designee, shall from time to time, but at least semiannually, meet and consult with the Commission on matters relating to the management and development of the monument.

(h) The Commission shall cease to exist 10 years after the date of its first meeting.

SEC. 8. The first sentence of section 202 of Public Law 100-225 (16 U.S.C. 460uu-12) is amended by deleting "and Zuni-Cibola National Historical Park" and inserting "Zuni-Cibola National Historical Park, and Petroglyph National Monument".

SEC. 9. There are authorized to be appropriated such sums as may be necessary for the purposes of this Act.

THE PETROGLYPH NATIONAL MONUMENT ESTABLISHMENT ACT OF 1989

Mr. DOMENICI. Mr. President, I rise today to encourage my colleagues to join me in supporting the passage of the Petroglyph National Monument Establishment Act, S. 286.

This bill will designate a portion of the Northwest Mesa Volcanic Escarpment here in Albuquerque as the Petroglyph National Monument. This legislation is needed to protect the escarpment and the thousands of ancient petroglyphs it contains from being destroyed by vandalism and increasing urbanization.

Mr. President, I think—and I know I may have a bias—that a sunset in Albuquerque is one of the most beautiful sights I have ever seen.

As the sun sets, the sky becomes nature's palette, a rich mosaic of blue, red, yellow, purple, orange, and pink. The Sandia Mountains, towering above the eastern edge of the city, radiate the colors of the setting Sun. The Rio Grande shimmers in the multihued light as it flows on its long, lazy trek south through the cottonwood bosque in the middle of the city.

Silhouetted before the sunset on the western edge of Albuquerque is the Northwest Mesa Volcanic Escarpment. Some 190,000 years ago, a series of volcanic eruptions along a 5-mile fissure in the Earth spewed lava in thin, but broad sheets toward the Rio Grande. Later eruptions covered the earlier lava flows, creating over time a 17-mile long, serpentine cliff—the Northwest Mesa Volcanic Escarpment—that sweeps up from the desert floor to rise 100 feet above it at some points.

Jutting up from the mesa top are five steep volcanic cones that now stand in silent testimony to the violent eruptions that created the West Mesa many eons ago. As the sky explodes in color and the Sun sets behind it, the dark ribbon of the escarpment and its

volcanic cones deepen to a primordial black.

Mr. President, words cannot express the beauty of a sunset in Albuquerque. You have to see it. And in order for the residents of Albuquerque and for people from all across America to see it, we must protect it.

The people of Albuquerque have already preserved the Sandia Mountains and the cottonwood bosque along the Rio Grande. Now, it is time to preserve the Northwest Mesa Volcanic Escarpment in order to protect our sunsets.

Just as importantly, we need to preserve the escarpment in order to protect our history.

Man first arrived at the escarpment at a time when mammoths, mastodons, and giant bison roamed up and down the Rio Grande Valley. The first inhabitants of the area, people we now call the Paleo-Indians, were hunters and gatherers who followed the herds of these large animals.

In the millennia that followed, the early Pueblo Indian people came to lead a less nomadic existence and relied more on agriculture. It was during this time, approximately 1000 B.C. to 500 A.D., that one of the inhabitants of the Rio Grande Valley picked up a rock and used it to peck out a geometric pattern on one of the large, dark basalt boulders that were strewn along the slope of the escarpment and created the first petroglyph.

In the ensuing centuries, as the population of the Pueblos that dotted the Rio Grande Valley grew, thousands more petroglyphs, picturing lizards, squirrels, men, crosses, circles, star beings, birds, flute players, serpents, and a world of other figures, were carved onto the boulders of the escarpment.

By the time that the first Spanish explorer, Vasquez de Coronado, arrived in the area in 1540, over 15,000 Indian petroglyphs stretched along the 17 miles of volcanic cliffs of the escarpment. The early Spanish settlers carved their symbols into the escarpment, creating their own petroglyphs.

The petroglyphs left by the Pueblo Indian inhabitants and the early Spanish settlers of the Rio Grande Valley can still be seen on the escarpment today. They are an important visual record of the early history of Albuquerque.

Unfortunately, the escarpment and the petroglyphs upon it are currently being threatened by vandalism and urbanization as Albuquerque spreads to the west. Hundreds of petroglyphs have already been destroyed.

In order to prevent any further destruction of the escarpment and the petroglyphs, we must act to preserve this area soon. If we delay, this magnificent resource, which forms a scenic boundary of Albuquerque and contains an important part of the city's history, will be lost.

Mr. President, in 1986, at my request, the Congress directed the National Park Service to conduct a study of the Northwest Mesa Volcanic Escarpment and the petroglyphs.

The Park Service's final report on the petroglyphs was released last year.

The report details that there are approximately 15,000 petroglyphs on the escarpment, most of which were created between 1300 and 1650 A.D. There are also at least 65 archaeological sites along the escarpment, some as old as 10,000 B.C.

According to the report:

> It is important to protect the integrity of the petrolglyphs for future research and study. To move or destroy the rock art and the physical setting would greatly reduce the quality of the resources.

The report also states that preservation of the escarpment will protect the scenic quality of Albuquerque.

The Park Service concludes that the escarpment is threatened by development pressures and immediate action is needed to preserve the escarpment. It recommends taking action to protect these resources using all available public and private capabilities.

The National Park Service outlines three alternatives for preserving the area:

First, a national monument under National Park Service control;

Second, a national monument jointly managed by the National Park Service, the State of New Mexico, and the city of Albuquerque; and

Third, joint management of the area by the State and the city with the cooperation of private landowners and technical and financial assistance from the Federal Government.

The report states that, because of the costs and geographic aspects of the area, alternative 2 would be the most effective method for protection of the escarpment.

The National Park Service estimates that a national monument protecting the petroglyphs would attract as many as 400,000 visitors a year, two-thirds of whom would be from out-of-State. These visitors would contribute an estimated $1.7 to $3.3 million to the local economy.

Following the conclusion of the National Park Service study, I convened an advisory group of conservationists, land owners, Government officials, and other concerned citizens to provide information and views on the various alternatives to the New Mexico congressional delegation as it put together the legislation to protect the escarpment.

In May 1988, this group, which was named the Advisory Group for the Establishment of a Petroglyph National Monument, presented its report to me. The advisory group supported the creation of a national monument. It made specific boundary recommendations, proposed provisions to be included in the legislation, and developed innovative proposals for land acquisition along the escarpment. Their work was essential in putting together a reasonable plan for the protection of this area.

While these efforts were underway, the city of Albuquerque was also working to protect the escarpment. In November of 1987, the city adopted a Northwest Mesa Escarpment plan. The plan recommends the conservation of the escarpment for the purpose of preserving the petroglyphs and the volcanic cliffs as public open space.

The city's escarpment plan proposes public ownership, through a phased acquisition program, for the escarpment and critical surrounding areas. It also provides immediate protection for the escarpment by imposing various zoning and construction restrictions, such as height and density limitations and buffer zones between development and the escarpment.

In addition, in October of 1987, the city instituted a ¼-cent sales tax for a variety of projects to enhance the quality of life in Albuquerque. Fourteen million dollars collected under that tax are earmarked for open space acquisition along the escarpment. The city has already spent or obligated $12 million of these funds, acquiring 500–600 acres. This is in addition to the 2,468 acres that it previously acquired along the escarpment.

The State of New Mexico has been involved in the effort to preserve the escarpment through its ownership of the existing Petroglyph State Park on the escarpment. Although the park is a State park, it is owned and operated by the city of Albuquerque and, thus, is a State park in name only.

In 1987, the New Mexico State Senate passed a memorial that directed the State government to assist the National Park Service and the city in the preparation of their respective plans for the preservation of the escarpment. The memorial also mandated that the State determine what its ultimate role should be in the effort to protect the escarpment.

The State supports preservation of the escarpment. It has agreed to assist with land acquisition associated with the expansion of Indian Petroglyph State Park. Over the past 2 years, the State legislature has authorized $6 million for the acquisition of land to expand Petroglyph State Park.

Mr. President, the city of Albuquerque and the State of New Mexico have begun the process of protecting Albuquerque's Northwest Mesa Volcanic Escarpment and its historic petroglyphs. Now it is time for the Federal Government to establish its role in this project through the creation of a Petroglyph National Monument.

The monument proposal has been developed over the past 4 years and

has involved scores of Federal, city, and State officials, private landowners, and concerned citizens. It enjoys unusually strong and practically universal support. In addition, the creation of a Petroglyph National Monument is consistent with the President's commitment to protecting the environment through the development of national park units in and near urban areas.

In 1988, then Congressman—and now Secretary of the Interior—Manuel Lujan and I developed and introduced the Petroglyph National Monument Establishment Act. However, because it was introduced late in the session, it was not enacted into law.

Last year, the new Congressman from Albuquerque, STEVE SCHIFF, took up where Manuel Lujan left off by introducing this legislation in the House of Representatives. Congressman SCHIFF has worked diligently on this legislation, and his efforts have made this a better bill.

My distinguished colleague from New Mexico, Senator BINGAMAN, is a cosponsor of the bill, and has been very supportive of the creation of the Petroglyph National Monument.

The Petroglyph National Monument Act:

First, declares that the petroglyphs are significant, that they are threatened by urbanization and vandalism, that the State of New Mexico and city of Albuquerque have shown great leadership in the protection of the petroglyphs, that the Pueblo Indians and the Atrisco heirs have shown a strong interest in the preservation of the escarpment, and that the National Park Service has no unit specifically established for the preservation of rock art.

Second, establishes the Petroglyph National Monument, encompassing essentially the boundaries identified as "Alternative 2" by the Park Service plus the "Southern Geologic Window and the Zuris-Mann Site." The 7,274-acre monument would be divided into three units: a 5,280-acre federally managed Atrisco unit; the 215-acre State/city-managed Boca Negra unit; and the 1,779-acre city-managed Piedras Marcadas unit.

Third, directs that the monument be administered by the National Park Service, in cooperation with the State and the city.

Fourth, allows the National Park Service to acquire lands in the national monument by donation, purchase, or exchange. State of New Mexico and city of Albuquerque lands may only be acquired by donation or exchange. The Secretary would have to acquire the surface and subsurface estates at the same time, unless doing so would hamper the ability to protect the escarpment or manage the monument. Allows the city and the State to acquire lands in the Federal area and then exchange them for Federal lands in their areas.

Fifth, allows Westland Development Co. to buy back their land that is purchased for the monument if their land is ever deleted from the monument.

Sixth, allows the National Park Service to provide immediate protection to threatened areas of the escarpment through acquisition by donation or a nominal fee of leasehold interests of escarpment land.

Seventh, authorizes the National Park Service to enter into cooperative agreements with the State of New Mexico and the city of Albuquerque for the administration of their lands within the national monument.

Eighth, authorizes the National Park Service to enter into cooperative agreements with public entities, Indian tribes, and nonprofit entities for the interpretation of the petroglyphs outside the national monument. This will allow the National Park Service to provide technical and financial assistance for the interim protection of areas along the escarpment.

Ninth, recognizes and protects existing utility corridors and facilities within the monument.

Tenth, permits the National Park Service to participate in land use and transportation management planning for lands adjacent to the monument and to provide technical assistance to the city and affected landowners for such planning.

Eleventh, directs the National Park Service, in consultation with the Petroglyph National Monument Advisory Commission, Pueblo Indians, the Atrisco heirs, and other interested parties, to develop a general management plan for the monument in 3 years. The plan shall include an estimate of visitor use, an interpretive program, a plan to implement the American Indian Religious Freedom Act, and a monument development plan.

Twelfth, directs the National Park Service to study other Rio Grande style rock art sites on Federal land in New Mexico, then report to Congress on the condition of those resources.

Thirteenth, allows nonexclusive access to the monument by Indian people for traditional cultural and religious purposes.

Fourteenth, establishes a 10-member advisory commission for the monument, consisting of representatives of the State, the city, the All Indian Pueblo Council, the Atrisco heirs, Westland Development Co., affected landowners, and others, to advise the Secretary of the Interior on the management and development of the monument and the preparation of the general management plan for the monument.

Fifteenth, amends the El Malpais National Monument Act approved in 1987 to include Petroglyph National Monument in the Masau Trail, the automobile touring route linking historic and prehistoric sites throughout New Mexico.

Mr. President, the Petroglyph National Monument is an innovative proposal because unlike most national park units, the Federal Government would not be responsible for the full cost of acquisition, development, and operation. Rather, the costs of the project would be split between the Federal Government, the city of Albuquerque, and the State of New Mexico.

The total cost of acquisition for the monument will be approximately $90 million. The cost to the Federal Government will be approximately $58 million. However, the value of the land acquired will be much greater, as significant portions of the monument may be acquired by donation or exchange.

Although the price-tag is high, I would like to assure my colleagues that the monument boundaries have been tightly drawn, so as to encompass the minimum amount of land necessary to create a viable unit of the National Park System.

The Federal Government will acquire 2,245 acres of private land, the city has acquired or will acquire 4,248 acres, and the State has acquired or will acquire 771 acres. The State and the city, thus, together will contribute over 2 acres for every acre that the Federal Government will contribute.

Two hearings were held on this bill, one in Albuquerque last April and the other in Washington in July. All the witnesses at both hearings testified in support of the creation of a petroglyph national monument.

This strong support is due to the effort that many groups, including the All Indian Pueblo Council, the American Association of University Women, the Friends of the Albuquerque Petroglyphs, the League of Women Voters, the National Parks and Conservation Association, the National Trust for Historic Preservation, the Open Space Task Force, Preservation Action, the Quality of Life Coalition, the Sierra Club, the Society for American Archaeology, the Wilderness Society, and others have put into this project.

I want to particularly note the contribution of Ike Eastvold of the Friends of the Albuquerque Petroglyphs, who came to me in August of 1986 and informed me about the need to protect the area. He has devoted the last 4 years of his life to this effort, and it is fair to say that, without him, this marvelous resource may have been lost.

In addition, J.J. Johnson, who served as president of the Advisory Committee for the Establishment of a Petroglyph National Monument, was instrumental in bringing together

many different interests and gaining their support for the national monument.

Westland Development Co., Inc. and the heirs of the Atrisco land grant also have been both helpful and accommodating. In 1692, the King of Spain created the Atrisco land grant on the escarpment. A good portion of the land in the area is still owned by the heirs of the Atrico land grant, through their corporate entity, Westland Development Co., Inc. They had some serious concerns about the legislation, which we were able to resolve by working them out together.

Finally, I would like to express my thanks to the National Park Service, and in particular to Doug Faris, chief of planning and design for the Southwest region of the Park Service. Doug has spent literally hundreds of hours on this project, and this legislation is a testament to the high quality of service that he performs on behalf of the Park Service.

Mr. President, nature has provided a beautiful backdrop for Albuquerque, with the Sandia Mountains on the east, the Rio Grande and the bosque in the middle, and the Northwest Mesa Volcanic Escarpment on the west. The people of Albuquerque have already preserved the mountains and the bosque. Now they want to preserve the West Mesa Escarpment so that we can save our sunsets and our history for Albuquerqueans and all Americans to enjoy. Let's help them do it.

The PRESIDING OFFICER. The question is on agreeing to the committee amendment in the nature of a substitute.

The committee amendment in the nature of a substitute was agreed to.

The PRESIDING OFFICER. The question is on the engrossment and third reading of the bill.

The bill was ordered to be engrossed for a third reading, was read the third time and passed.

EXCHANGE OF CERTAIN FEDERAL LANDS

The Senate proceeded to consider the bill (S. 319) to effect and exchange of lands between the U.S. Forest Service and the Salt Lake City Corp. within the State of Utah, and for other purposes, which had been reported from the Committee on Energy and Natural Resources, with an amendment to strike all after the enacting clause and insert in lieu thereof the following:

SECTION 1. SHORT TITLE.

This Act may be cited as the "Salt Lake City Watershed Improvement Act of 1989".

SEC. 2. FINDINGS AND PURPOSES.

(a) The Congress finds that—

(1) current land ownership patterns in the Northern Canyons of the Wasatch Mountains east of Salt Lake City, Utah, unnecessarily impede efficient land and water resource management activities by the Forest Service and Salt Lake City on their respective lands;

(2) the Act of September 19, 1914, reserved Federal lands in these canyons from mineral entry and set them aside as a municipal water supply reserve for the use and benefit of Salt Lake City;

(3) the 1914 Act further provides for cooperation between the Forest Service and Salt Lake City in managing the lands for municipal water supply purposes; and

(4) a consolidation of Forest Service lands and Salt Lake City lands in the canyon vicinities would be in the public interest and would enhance land management and water resource protection opportunities for both Salt Lake City and the Forest Service.

(b) The purposes of this Act are to authorize an exchange of Forest Service and Salt Lake City lands to consolidate ownership and facilitate management, to adjust boundaries of the Wasatch National Forest accordingly, and to protect valid existing rights appurtenant to lands subject to conveyance under this Act.

SEC. 3. CONVEYANCE OF LANDS.

(a) The Secretary of Agriculture (hereafter referred to as the "Secretary") is authorized and directed to convey certain Federal lands managed by the Forest Service within the State of Utah, and generally as depicted on the map entitled "Salt Lake City—Wasatch National Forest Land Exchange" and dated November 1989, for certain lands owned by the Salt Lake City Corporation (hereinafter referred to as the "City") as generally depicted on such map. Such map, along with a legal description of all lands to be conveyed, shall be on file and available for public inspection in the office of the Forest Service, Department of Agriculture. The Secretary shall convey such Federal lands to the City only upon the occurrence of all of the following:

(1) Publication by the Secretary in the Federal Register of a legal description of all Federal lands to be conveyed to the City pursuant to this Act;

(2) Publication by the Secretary in the Federal Register of a legal description of all City lands to be conveyed to the United States pursuant to this Act;

(3) Written notification by the City to the Secretary that the City accepts the provisions of this Act;

(4) Delivery to the Secretary by the City of documents of conveyance of the lands to be conveyed by the City; and

(5) Delivery to the City and the Secretary of written approval by the Attorney General of the United States of the title to the lands described in documents of conveyance submitted by the City within three months of their receipt by the Secretary.

(b) Conveyances of Federal lands under this Act shall be completed notwithstanding—

(1) the reservations of the Act of September 19, 1914;

(2) section 206(a) of the Federal Land Policy and Management Act of 1976 (43 U.S.C. 1716); and

(3) withdrawals of lands under the United States court case National Wildlife Federation versus Burford,

(c) Unless otherwise described in the legal land descriptions as provided under subsection (a), all land acquisitions and conveyances made pursuant to this Act shall only include the surface estate.

(d) Land conveyances pursuant to this Act shall not require the preparation of an environmental analysis or an environmental impact statement under section 102 of the National Environmental Policy Act of 1969 (42 U.S.C. 4332).

(e) Lands acquired by the United States pursuant to this Act shall be added to, and administered as part of, the National Forest System under principles of multiple use/sustained yield consistent with and conforming to the reservations and purposes of the Act of September 19, 1914, and this Act.

(f) Upon conveyance of the lands pursuant to this Act, the Secretary is directed to modify the boundaries of the Wasatch National Forest to exclude those lands conveyed from the United States to the City and to include those lands conveyed from the City to the United States.

(g) Valid existing rights appurtenant to lands acquired by the Secretary or acquired by the City pursuant to this Act shall be recognized, protected, and managed by the acquiring government in accordance with the terms and authorities under which such rights were issued until new, similar rights can be issued by the acquiring government—

(1) in the case of lands acquired by the Federal Government, the Secretary shall negotiate with holders of valid existing rights appurtenant to such lands issued by the City and provide such holders of rights new, similar rights under the authority of the Federal Government.

(2) in the case of lands acquired by the City—

(A) the City shall negotiate with holders of grazing permits, special use permits (to include easements and rights-of-way), or other valid existing rights appurtenant to such lands issued by the Federal Government and provide such holders of rights with similar new rights under the authority of the City; and

(B) the Secretary and the Secretary of the Interior shall consult and cooperate with the City on any terms and conditions, consistent with watershed and water resource protection under the Act of September 19, 1914, for leaseholder or mining claimant access to the mineral estate retained by the Federal Government.

(h) The City will recognize the designation of the Mormon Pioneer National Historic Trail over lands which it acquires pursuant to this Act and will manage its lands in a manner consistent with such designation.

SEC. 4. AUTHORIZATION OF APPROPRIATIONS.

There are authorized to be appropriated such sums as may be necessary to carry out the purposes of this Act.

The PRESIDING OFFICER. The question is on agreeing to the committee amendment in the nature of a substitute.

The committee amendment in the nature of a substitute was agreed to.

The PRESIDING OFFICER. The question is on the engrossment and third reading of the bill.

The bill was ordered to be engrossed for a third reading, was read the third time and passed.

DESOTO EXPEDITION TRAIL COMMISSION ACT

The Senate proceeded to consider the bill (S. 555) to establish in the Department of the Interior the DeSoto Expedition Trail Commission, and for other purposes, which had been re-

ported from the Committee on Energy and Natural Resources, with an amendment to strike all after the enacting clause and insert in lieu thereof the following:

SECTION 1. SHORT TITLE.

This Act may be cited as the "De Soto Expedition Trail Commission Act of 1989".

SEC. 2. FINDINGS AND PURPOSE.

(a) FINDINGS.—The Congress finds that—

(1) the expedition of Hernando de Soto was the first major European exploration of the interior of the southeastern United States and that the chronicles of the expedition provide a rare description of indigenous Indian societies;

(2) knowledge gained as a result of the expedition contributed significantly to the subsequent exploration and colonization of the region;

(3) discovery of the first winter encampment in Tallahassee, Florida, is the most recent archaeological evidence of the De Soto expedition in the United States;

(4) the State of Florida has completed the marking of a commemorative De Soto trail and the State of Alabama has identified a commemorative trail to be marked by 1990;

(5) the De Soto Trail Commission of the Southeast Region has identified a recommended "Highway Route of the De Soto Expedition"; and

(6) official commemoration of the De Soto expedition will increase public awareness of early European exploration of the southeastern United States, encourage further archaeological and historical research, and ultimately increase our knowledge of the early historic period of the southeastern United States.

(b) PURPOSE.—In furtherance of the findings set forth in subsection (a) of this section, it is the purpose of this Act to establish, through a Commission composed of individuals representing scholarly research and all concerned levels of government: (1) a commemorative highway route of the De Soto expedition, and (2) a comprehensive plan for the administration of such a highway route including associated public interpretive facilities.

TITLE I—DE SOTO EXPEDITION TRAIL COMMISSION

SEC. 101. ESTABLISHMENT.

(a) IN GENERAL.—To carry out the purposes of this title and to assist with the establishment of a commemorative highway route of the De Soto expedition, there is hereby established in the Department of the Interior the De Soto Expedition Trail Commission (hereinafter in this Act referred to as the "Commission"). The Commission shall exercise its responsibilities and authorities as provided in this Act with respect to that region of the southeastern United States comprising the States of Alabama, Arkansas, Florida, Georgia, Louisiana, Mississippi, North Carolina, South Carolina, Tennessee and Texas (hereinafter in this Act referred to as the "involved States"). The Commission shall consist of 19 members, appointed by the Secretary of the Interior (hereinafter in this Act referred to as the "Secretary") as follows:

(1) 10 members appointed from recommendations submitted by the Governors of the involved States, of which one shall represent each State;

(2) 4 members appointed from recommendations submitted by the De Soto Trail Commission of the Southeast Region;

(3) 2 members appointed from recommendations submitted by State Historic Preservation officers of one or more involved States, both of whom shall represent local or county historical commissions;

(4) 2 members appointed by the Secretary, of which one shall hold the position of Superintendent, De Soto National Memorial and the other shall have knowledge and experience in the Spanish colonization of the southeastern United States; and

(5) 1 member appointed by the Secretary from recommendations submitted by the Smithsonian Institution.

(b) APPOINTMENT.—All members of the Commission shall be appointed for terms of two years, except that the terms of the 10 members appointed from recommendations submitted by the Governors of the involved States pursuant to subsection (a)(1) shall be for a term of four years.

(c) CHAIRPERSON.—The Commission shall elect a chairperson from among its members. The term of the chairperson shall be two years.

(d) TERMS.—Any member of the Commission appointed for a definite term may serve after the expiration of such term until a successor is appointed. Any vacancy in the Commission shall be filled in the same manner in which the original appointment was made. Any member appointed to fill a vacancy shall serve for the remainder of the term for which its predecessor was appointed.

(e) QUORUM.—A simple majority of Commission members shall constitute a quorum.

(f) MEETINGS.—The Commission shall meet at least biannually or at the call of the chairperson or a majority of its members.

(g) COMPENSATION.—Members of the Commission shall serve without compensation as such. Members shall be entitled to travel expenses under section 5703, title 5, United States Code, when engaged in Commission business, including per diem in lieu of subsistence in the same manner as persons employed intermittently.

SEC. 102. FUNCTIONS OF THE COMMISSION.

(a) IN GENERAL.—The Commission shall—

(1) coordinate activities of Federal, State, and local governments and private businesses and organizations in order to further the commemoration of the De Soto expedition;

(2) recommend to the Secretary guidelines and standards consistent with standards established by the National Park Service for the commemoration of the De Soto expedition, including interpretive methods;

(3) submit to the Secretary, within two years after the date of enactment of this Act, recommendations pertaining to the identification and designation of a highway route of the De Soto expedition, interpretive facilities to appropriately commemorate Spanish exploration, and a detailed plan to administer such route and facilities; and

(4) provide advice and assistance with respect to the preparation of grant or loan applications to the Secretary as provided in section 105.

(b) ANNUAL REPORTS.—(1) The Commission shall submit an annual report to the Secretary describing the activities of the Commission, progress with respect to the designation of a commemorative highway route and establishment of interpretive facilities and setting forth expenses and income.

(2) The Secretary shall submit an annual report to the Committee on Energy and Natural Resources of the United States Senate and the Committee on Interior and Insular Affairs of the United States House of Representatives describing the Commission's activities. Such report shall specify research activities, progress with respect to commemorative route designation, a summary of loans, grants, and technical assistance provided by the Secretary under this Act, including the amount, recipient, and purpose of any loan, grants, and technical assistance so provided, as well as the anticipated funds and personnel to be made available by the Secretary during the next fiscal year to implement the provision of the Act. Such report shall also include an analysis of the adequacy of actions taken during the previous year to: commemorate the De Soto expedition, conduct archeological and historical research, and publish information regarding the expedition and native cultures encountered by the expedition.

(c) EXPIRATION.—The Commission established pursuant to this title shall cease to exist four years after the date of enactment of this Act. Any property or funds of the Commission remaining upon the expiration of the Commission shall be transferred by the Commission to the United States, to a State or local government agency, to a private nonprofit organization exempt from income taxes under section 501(c)(3) of the Internal Revenue Code of 1986, or to any combination of the foregoing.

SEC. 103. STAFF OF THE COMMISSION.

(a) STAFF.—(1) The Commission shall have the power to appoint and fix the compensation of such staff as may be necessary to carry out its duties.

(2) Staff appointed by the Commission—

(A) shall be appointed subject to the provision of title 5, United States Code, governing appointments in the competitive service; and

(B) shall be paid in accordance with the provisions of chapter 51 and subchapter III of chapter 53 of such title relating to classification and General Schedule pay rates.

(b) EXPERTS AND CONSULTANTS.—Subject to such rules as may be adopted by the Commission, the Commission may procure temporary and intermittent services to the same extent as is authorized by section 3109(b) of title 5, United States Code, but at rates determined by the Commission to be reasonable.

(c) STAFF OF OTHER AGENCIES.—(1) Upon request of the Commission, the head of any Federal agency may detail, on a reimbursable basis, any of the personnel of such agency to the Commission to assist the Commission in carrying out the Commission's duties.

(2) The Commission may accept the services of personnel; detailed from one or more of the involved States (and any political subdivision thereof) and may reimburse the State(s) or political subdivision(s) for those services.

SEC. 104. POWERS OF THE COMMISSION.

(a) IN GENERAL.—The Commission may for the purpose of carrying out the provision of this title hold such hearings, sit and act at such times and places, take such testimony, and receive such evidence, as the Commission may deem advisable.

(b) BYLAWS.—The Commission may make such bylaws, rules and regulations, consistent with this Act, as it considers necessary to carry out the purposes of this title.

(c) DELEGATION.—When so authorized by the Commission, any member or agent of the Commission may take any action which the Commission is authorized to take by this section.

(d) TECHNICAL ADVISORY GROUPS.—The Commission may establish and appoint one or more technical advisory groups to pro-

vide technical advice in financing, interpretive facilities, tourism, publications, and intergovernmental coordination.

(e) DONATIONS.—Notwithstanding any other provision of law, the Commission may seek and accept donations of funds or services from individuals, foundations, corporations, and other private entities, and from public entities, for the purpose of carrying out its duties.

(f) FUNDS FROM OTHER SOURCES.—The Commission may use its funds to obtain money from any source under any program or law requiring the recipient of such money to make a contribution in order to receive such money.

(g) OBTAINING PROPERTY.—The Commission may obtain by purchase, rental, donation, or otherwise, such property, facilities, and services, as may be needed to carry out its duties except that the Commission may not acquire any real property or interest in real property.

SEC. 105. GRANTS AND LOANS.

(a) In furtherance of the purposes of this title, the Secretary, in consultation with the Commission, is authorized to make grants and loans for archeological and historical research and field investigations regarding the De Soto expedition, for purposes including, but not limited to: the location of the expedition route, recovery and preservation of archeological or historical materials, identification of encampment sites, and advancement of knowledge regarding Hernando de Soto, his expedition through the southeastern United States and the native cultures inhabiting the region during the period of the expedition.

(b) Prior to making any grant or loan the Secretary shall require a detailed cost estimate to be prepared for the project to be funded. Any loan made pursuant to this section shall be subject to such terms and conditions, including interest, as may be established by the Secretary, in consultation with the Commission.

SEC. 106. AUTHORIZATION OF APPROPRIATIONS.

(a) For the purposes of carrying out the functions of the Commission, there are authorized to be appropriated such sums not to exceed $250,000.

(b) For the purposes of section 105, there are authorized to be appropriated such sums not to exceed $750,000.

TITLE II—HIGHWAY ROUTE OF THE DE SOTO EXPEDITION

SEC. 201. DESIGNATION OF THE ROUTE.

(a) DESIGNATION.—In order to provide for public appreciation, education, understanding, and enjoyment of the De Soto expedition and the native cultures encountered by the expedition, the Secretary, with the concurrence of the agency having jurisdiction over applicable public roads, and in consultation with the Commission, shall designate by publication of a description thereof in the Federal Register, a vehicular route along existing public roads paralleling as closely as practicable the route of the De Soto expedition. Such route shall be known as the Highway Route of the De Soto Expedition (hereinafter in this title referred to as the "Highway Route"), and shall be designated with appropriate markers and other informational displays to guide members of the public. The Secretary may provide funds to States or units of local government having jurisdiction over such roads so designated for such markers and other informational displays.

(b) INITIAL ROUTE.—The route as initially designated shall include that portion as designated by the State of Florida described as Florida Highway 64 from the De Soto National Memorial to Bradenton, thence U.S. Highway 301 to Bushnell, thence U.S. Highway 48 to Floral City, thence U.S. Highway 41 to Williston, thence Florida Highway 121 to Gainesville, thence Highway 90 to the Florida-Georgia State line and that portion proposed to be designated by the State of Alabama described as U.S. Highway 278 from the Georgia-Alabama State line to Piedmont, thence Alabama Highway 21 to Winterboro, thence Alabama Highway 76 to Childersburg, thence U.S. Highway 231 to Montgomery, thence U.S. Highway 80 to Uniontown, thence Alabama Highway 61 to Greensboro, thence Alabama Highway 69 to Tuscaloosa, thence U.S. Highway 82 to the Alabama-Mississippi State line.

(c) ADDITIONAL SEGMENTS.—The Secretary may, in the manner set forth in section 201 of this title, designate additional segments of the Highway Route from time to time upon the recommendation of the Commission as provided by section 102(a)(3).

SEC. 202. TECHNICAL ASSISTANCE.

With respect to segments of the Highway Route, the Secretary may, in consultation with the Commission, provide technical assistance to States for the development of interpretive displays and materials in order to enhance public appreciation of the archeological, historical, and cultural values along the Highway Route.

SEC. 203. AUTHORIZATION OF APPROPRIATIONS.

There are authorized to be appropriated such sums not to exceed $500,000 to carry out the purposes of this title. No funds made available under this title shall be used for the operation, maintenance, or repair of any road or related structure.

The PRESIDING OFFICER. The question is on agreeing to the committee amendment in the nature of a substitute.

The committee amendment in the nature of a substitute was agreed to.

The PRESIDING OFFICER. The question is on the engrossment and third reading of the bill.

The bill was ordered to be engrossed for a third reading, was read the third time and passed.

MERRIMACK RIVER WILD AND SCENIC RIVERS ACT

The Senate proceeded to consider the bill (S. 1046) to designate the Merrimack River, in the State of New Hampshire, as a river to be studied for inclusion in the National Wild and Scenic Rivers System, and for other purposes, which had been reported from the Committee on Energy and Natural Resources, with amendments as follows:

(The parts of the bill intended to be stricken and shown in boldface brackets, and the parts of the bill intended to be inserted are shown in italics.)

S. 1046

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled,

SECTION 1. SHORT TITLE.

This Act may be cited as the "Merrimack River Study Act of 1989".

SEC. 2. STUDY RIVER DESIGNATION.

Section 5(a) of the Wild and Scenic Rivers Act (16 U.S.C. [1276(a)) is] *1276(a)), as amended, is further* amended by adding the following new paragraph:

["(————————)] *"(106)* MERRIMACK RIVER, NEW HAMPSHIRE.—The segment from its origin at the confluence of the Pemigewasset and Winnipesaukee Rivers in Franklin, New Hampshire, to the backwater impoundment at Hooksett Dam, excluding the Garvins Falls Dam and its impoundment.".

SEC. 3. STUDY AND REPORT.

Section 5(b) of the Wild and Scenic Rivers Act (16 U.S.C. [1276(b)) is] *1276(b)), as amended, is further* amended by adding the following new paragraph:

["(————————)] *"(8)* The study of the Merrimack River, New Hampshire, shall be completed and the report thereon submitted not later than 3 years after the date of enactment of [the Merrimack River Study Act of 1989".] *this paragraph.".*

SEC. 4. AUTHORIZATION OF APPROPRIATIONS.

There are authorized to be appropriated such sums as may be necessary to carry out the purposes of this Act.

The amendments were agreed to.

The bill was ordered to be engrossed for a third reading, read the third time, and passed.

The title was amended so as to read: "A bill to amend the Wild and Scenic Rivers Act of 1968 by designating a segment of the Merrimack River in the State of New Hampshire for study for potential addition to the National Wild and Scenic Rivers System, and for other purposes.".

THE MERRIMACK RIVER STUDY BILL OF 1989

Mr. RUDMAN. Mr. President, I rise today in support of S. 1046, the Merrimack River Study Act of 1989. Senate approval of this bill will be a major step in the direction of long-term protection for this remarkable river resource, which begins in Franklin, NH, at the confluence of the Pemigewasset and Winnepesaukee Rivers and flows southward into eastern Massachusetts to the Atlantic Ocean. Passage of S. 1046 will be a major victory for the communities who organized to protect the river from encroaching development. As part of a 2-year effort, the Merrimack River Coordinating Committee, working with all local communities and the various interests, built a consensus on the long-term protection of the Merrimack. The legislation we are considering today represents that consensus. This measure has the support of Governor Gregg and all the communities along the proposed study segment.

I want to thank the Senate Energy and Natural Resources Committee for taking rapid action on this measure. I would also like to express my appreciation for the work of the chairman and ranking member of the Subcommittee on Public Lands, Senators BUMPERS and WALLOP.

I ask unanimous consent to have a letter from the mayor of Concord, NH,

printed in the RECORD following my remarks. I am proud to be part of this effort and I urge my colleagues to support this measure.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

CITY OF CONCORD, NH,
December 26, 1989.

Hon. WARREN E. RUDMAN,
U.S. Senate, Hart Senate Office Building, Washington, DC.

DEAR SENATOR RUDMAN: Thank you for your help and the help of your staff on the request for the Merrimack River Study by the United States Department of the Interior National Park Service. This letter is to give you a recap of the City Council action regarding the request.

A special meeting of the City Council was called by eight Councilors on November 6, 1989. They were reacting to the request of several landowners in the river area to consider the possibility of requesting an extension of the comment period or seeking a 30-day delay of the Senate Subcommittee vote on the matter of the study bill. At this meeting the Concord City Council voted to hold a public hearing on December 4, 1989, to address the concerns that had been raised.

The City Council held the public hearing on December 4, 1989 and the meeting was attended by approximately 230 people. The meeting, originally scheduled for the City Council Chamber had to be moved to the Legislative Office Building and then to Representatives Hall in the State House because of the large number of citizens present. This was a first for the City Council which can always accommodate interested parties in its own chamber. At the hearing there were three people who testified in favor of a modification of the quarter mile set-back, one local businessman who testified against any study, and twenty-eight people who testified in support of the study. The City Council took no action at the close of the hearing.

At the regular meeting of the City Council held Monday, December 11, 1989, a City Councilor requested that the matter of Council support for the study be reconsidered. That motion received no support from those present. The Councilor said he would not pursue the matter due to the lack of support.

Your work on this study is appreciated. The City is looking forward to working with the Park Service after the study bill is passed into law.

Very truly yours,

ELIZABETH S. HAGER,
Mayor.

The PRESIDING OFFICER. The question is on agreeing to the committee amendment.

The committee amendment was agreed to.

The question is on the engrossment and third reading of the bill.

The bill was ordered to be engrossed for a third reading and was read the third time and passed.

S. 1046

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled,

SECTION 1. SHORT TITLE.

This Act may be cited as the "Merrimack River Study Act of 1989".

SEC. 2. STUDY RIVER DESIGNATION.

Section 5(a) of the Wild and Scenic Rivers Act (16 U.S.C. 1276(a)), as amended, is further amended by adding the following new paragraph:

"(106) MERRIMACK RIVER, NEW HAMPSHIRE.—The segment from its origin at the confluence of the Pemigewasset and Winnipesaukee Rivers in Franklin, New Hampshire, to the backwater impoundment at Hooksett Dam, excluding the Garvins Falls Dam and its impoundment.".

SEC. 3. STUDY AND REPORT.

Section 5(b) of the Wild and Scenic Rivers Act (16 U.S.C. 1276(b)), as amended, is further amended by adding the following new paragraph:

"(8) The study of the Merrimack River, New Hampshire, shall be completed and the report thereon submitted not later than 3 years after the date of enactment of this paragraph.".

SEC. 4. AUTHORIZATION OF APPROPRIATIONS.

There are authorized to be appropriated such sums as may be necessary to carry out the purposes of this Act.

CORRECTION IN THE ENROLLMENT OF S. 1838

Mr. MITCHELL. Mr. President, on behalf of Senator SASSER I send to the desk a concurrent resolution correcting the enrollment of S. 1838 and ask for its immediate consideration.

The PRESIDING OFFICER. The clerk will state the concurrent resolution by title.

The assistant legislative clerk read as follows:

A concurrent resolution (S. Con. Res. 89) correcting the enrollment of S. 1838.

The PRESIDING OFFICER. Is there objection to the immediate consideration of the concurrent resolution?

There being no objection, the concurrent resolution (S. Con. Res. 89) was considered and agreed to as follows:

S. CON. RES. 89

Resolved by the Senate (the House of Representatives concurring), That in the enrollment of the bill (S. 1838), to establish or modify, research, promotion, and consumer education programs for certain agricultural commodities, and for other purposes, the Secretary of the Senate is hereby authorized and directed, in the enrollment of the said bill, to make the following correction, namely, in section 405(g)(5) after "any producer" insert: "operating mushroom production facilities,".

Mr. MITCHELL. Mr. President, I move to reconsider the vote by which the concurrent resolution was agreed to.

Mr. DOLE. I move to lay that motion on the table.

The motion to lay on the table was agreed to.

Mr. MITCHELL. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The assistant legislative clerk proceeded to call the roll.

Mr. MITCHELL. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

ORDERS FOR THURSDAY

RECESS UNTIL 9:45 A.M. TOMORROW

Mr. MITCHELL. Mr. President, I ask unanimous consent that when the Senate completes its business today it stand in recess until 9:45 a.m. tomorrow, Thursday, January 25, 1990.

The PRESIDING OFFICER. Without objection, it is so ordered.

ORDER FOR MORNING BUSINESS

Mr. MITCHELL. Mr. President, I ask unanimous consent that following the time for the two leaders that there be a period for morning business until 10 a.m. with Senators permitted to speak therein.

The PRESIDING OFFICER. Without objection, it is so ordered.

SCHEDULE

Mr. MITCHELL. Mr. President, to outline the schedule tomorrow for the benefit of Senators, at 9:45 we will come in. There will be 5 minutes of leader time for both the distinguished Republican leader and myself and 5 minutes for morning business for the introduction of legislation or other matters that can be accomplished in that time.

At 10 the Senate will take up the veto message of the President on H.R. 2712. That will be considered under a 4½-hour time limitation with a vote occurring at 2:30 p.m. on whether or not to override the President's veto.

Once the Senate has disposed of the veto message we will then return to the clean air bill and I will have an announcement tomorrow morning in leader time of the schedule for the remainder of the day tomorrow with respect to the clean air bill following the vote on the veto override.

RECESS UNTIL 9:45 A.M. TOMORROW

Mr. MITCHELL. Mr. President, if the distinguished Republican leader has no further business and if no Senator is seeking recognition, I now ask unanimous consent that the Senate stand in recess under the previous order until 9:45 a.m. tomorrow, Thursday, January 25, 1990.

There being no objection, the Senate, at 6:18 p.m., recessed until Thursday, January 25, 1990, at 9:45 a.m.

NOMINATIONS

Executive nominations received by the Senate January 24, 1990:

AARON L. SCOGGINS

HOUSE OF REPRESENTATIVES—*Wednesday, January 24, 1990*

The House met at 2 p.m.

The Chaplain, Rev. James David Ford, D.D., offered the following prayer:

In this our prayer, O gracious God, we remember those who know not the joy and satisfaction of a full life. We recall the hostages of every nation who are separated from those they love, who endure the pain and loneliness of their captivity. We pray, that as Your spirit crosses every barrier of time and place, so may our prayers give support and encouragement to all who are in need. May Your peace that passes all understanding unite us as one people and may we share together as one human family the joys and blessings of freedom. This is our earnest prayer. Amen.

THE JOURNAL

The SPEAKER. The Chair has examined the Journal of the last day's proceedings and announces to the House his approval thereof.

Pursuant to clause 1, rule I, the Journal stands approved.

Mr. BOEHLERT. Mr. Speaker, pursuant to clause 1, rule I, I demand a vote on agreeing to the Speaker's approval of the Journal.

The SPEAKER. The question is on the Chair's approval of the Journal.

The question was taken; and the Speaker announced that the ayes appeared to have it.

Mr. BOEHLERT. Mr. Speaker, I object to the vote on the ground that a quorum is not present and make the point of order that a quorum is not present.

The SPEAKER. Evidently a quorum is not present.

The Sergeant at Arms will notify absent Members.

The vote was taken by electronic device, and there were—yeas 312, nays 89, answered "present" 3, not voting 27, as follows:

[Roll No. 2]

□ 1425

Mr. UDALL changed his vote from "nay" to "yea."

Mr. GORDON changed his vote from "present" to "yea."

So the Journal was approved.

The result of the vote was announced as above recorded.

PERSONAL EXPLANATION

Mr. NELSON of Florida. Mr. Speaker, had I been present, I would have voted "aye" on rollcall 2.

PERSONAL EXPLANATION

Mr. MAZZOLI. Mr. Speaker, I was unavoidably absent. Had I been present, I would have voted "yea" on rollcall No. 2, approving the Journal of Tuesday, January 23, 1990.

PLEDGE OF ALLEGIANCE

The SPEAKER. Will the gentlewoman from Hawaii [Mrs. SAIKI] please come forward and lead the House in the Pledge of Allegiance.

Mrs. SAIKI led the Pledge of Allegiance as follows:

I pledge allegiance to the Flag of the United States of America, and to the Repub-

lic for which it stands, one nation under God, indivisible, with liberty and justice for all.

MESSAGE FROM THE SENATE

A message from the Senate by Mr. Hallen, one of its clerks, announced that the Senate had passed without amendment a concurrent resolution of the House of the following title:

H. Con. Res. 242. Concurrent resolution providing for a joint session of Congress to receive a message from the President on the State of the Union.

The message also announced that the Senate had passed a resolution of the following title, in which the concurrence of the House is requested:

S. RES. 228

Resolved, That the Secretary inform the House of Representatives that a quorum of the Senate is assembled and that the Senate is ready to proceed to business.

ANNOUNCEMENT BY THE SPEAKER

The SPEAKER. The Chair will receive five 1-minute speeches from Members on each side of the aisle.

PRESIDENT BUSH SHOULD USE HIS EXECUTIVE AUTHORITY TO UTILIZE VACANT FEDERAL PROPERTY TO RELIEVE THE PRISON CRISIS

(Ms. KAPTUR asked and was given permission to address the House for 1 minute and to revise and extend her remarks.)

Ms. KAPTUR. Mr. Speaker, I have great expectations for President Bush's upcoming State of the Union Address. Just over a year ago he stood in this body and said that his war on drugs would be waged on all fronts. But a year later the effort seems to be full of tangles.

On the frontline of the war on drugs, States and local communities, what does the President's plan do? It provides not one penny for the construction of local and State prisons. Convicted felons in 46 of 50 of our States are on waiting lists to serve their time.

Just last week, in my own district, four prisoners arrested for aggravated drug trafficking were released because there was no room for them.

The prison overcrowding situation has become a national crisis. Why cannot the President use his Executive authority to use vacant Federal properties to help us deal with this situation now?

I ask the President, when he comes next week before this body, to please provide the leadership to truly wage war against drugs.

The enemy, drugs, is everywhere and it is engulfing us.

CAMPAIGN REFORM

(Mr. MICHEL asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. MICHEL. Mr. Speaker, I was told when I returned to Washington that you had discussed campaign reform on a Sunday morning news show and promised that the House would take up a reform bill.

Mr. Speaker, I have devoted a good deal of time to campaign reform in this Congress. Our Republican Conference, the House Republican Conference, has adopted a set of proposals aimed at restoring some sense of integrity to Federal campaign practices, and it will be introduced shortly. But, Mr. Speaker, I am not under any delusions that the Republican bill, as good as it is, can be enacted into law. If you bring a purely Democratic bill to the floor, it will suffer the same ultimate fate.

□ 1430

If Members bring a purely Democrat bill to the floor, it will suffer the same ultimate fate.

However, by its very nature, campaign reform must be bipartisan. It is a partisan subject. True reform has to be bipartisan. This is not like budget reform or ethics reform, procedural reform, or a banking reform bill. Campaign practices are those which change the balance of power between one party and another. One party cannot change the rules of campaigning and then call it reform.

Mr. Speaker, I implore Members not to bring a Democrat bill to the floor and call it reform. I ask Members to reach consensus if possible, and then it will be reform.

I have gone the extra mile in this cause. I am not interested in a partisan exercise on the floor and some cosmetic gesture to the public demand for change. I am interested in seeing a campaign bill signed into law, and nothing short of that. I hope we will be able to work together in the best of spirit.

BUDGET PRIORITIES NEED LEADERSHIP

(Mr. HOAGLAND asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. HOAGLAND. Mr. Speaker, it is with great anticipation that we look forward to hearing the President's speech next Wednesday night. I hope, and I know we all hope that that speech will contain a budget that provides for authentic debt reduction. Last year's proposal from the White House was overly optimistic, as we all know, with respect to a number of assumptions, assumptions concerning economic growth and concerning interest rates that threw the figures off by billions.

We need a budget, Mr. Speaker, without asset sales that do not materialize. We need a budget that does not contain so-called off budget financing. We need a budget without smoke and mirrors. The economic future of our Nation depends on our putting our economic house in order. We have substantial and inadequate savings and investments in this Nation. We have a gross balance of trade deficit. We must bring the deficit down. We are asking for leadership from the White House on this very important issue.

HONOR SERVICE MEMBERS

(Mr. PAXON asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. PAXON. Mr. Speaker, this flag is a very special one. This flag was worn with great honor and great valor by a constituent of mine, Pfc. David "Chip" Turner while he was on duty in Panama during the recent invasion of that country.

Mr. Speaker, like so many others, Chip Turner served with valor because he was wounded in Panama during this operation. He was wounded while ministering to one of his colleagues whose wounds ultimately proved fatal.

My friend, like the hundreds and hundreds of others, thousands of others who served there, they deserve to be honored and recognized by this Congress for their duty on behalf of this country. They fought for freedom and democracy, and they fought the war on drugs in that faraway land. I am dismayed that as of yet, this Congress has not honored these men and women. This Congress has not recognized what they stood for, in Panama, and certainly has not stood up and honored yet the Commander in Chief whose leadership made possible this operation.

I hope before this week is out we will do just that.

HOPE FOR THE AMERICAN DREAM

(Mr. HAYES of Louisiana asked and was given permission to address the house for 1 minute and to revise and extend his remarks.)

Mr. HAYES of Louisiana. Mr. Speaker, a week from today the President of the United States will stand back here and deliver the State of the Union Address. Mr. President, at a time of extraordinary changes in the world, I hope we would recognize that the reason that they have been brought about was because of the men and women in this country who have carried the great burden of leadership. I am not talking about any Member of

this body. I am not talking about any one person in particular.

However, as the leader of the free world, your recognition that it was the ordinary citizens whose example of the abilities to work hard to do well was the example that led to the crack in the wall. I hope when citizens receive the State of the Union, the President's plans for the future, I hope he recognizes that this is the person whose kid now needs to go to college, and that our plans include that. That this is the veteran who fought, who won, who led to the changes we are seeing today, but who cannot get all the health benefits, and our plan will include them. That these are the people who are bearing an unfair share of the tax burden, and your plans include some relief for them.

Mr. President, we talk of reaching out in bipartisan fashion. I assure Members that this Member of Congress on this side of the aisle is absolutely committed to continue the achievement of the American dream, and allow those who wish to work hard and do well, an opportunity to do no less.

NEED FOR BIPARTISANSHIP

(Mr. DOUGLAS asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. DOUGLAS. Mr. Speaker, we just heard a plea for bipartisanship. One of the reasons we do not get a good reputation in this body is petty partisanship.

Unfortunately this week, the Whip's Notice said that yesterday we were supposed to be working on a commendation for the soldiers that served in Panama. The reason we are not voting on it is that it was also asked to include the commander in chief of those soldiers. However, that was pulled. We are not going to be voting on it because it also would praise President George Bush who ordered those soldiers into service.

Now this reminds me that we have one of the Ten Commandments that talks about envy and covetousness. I close by reminding those who pulled that vote of commendation, an old English proverb: "Grudge not another what you cannot attain yourself."

INVEST IN EDUCATION

(Mr. OWENS of Utah asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. OWENS of Utah. Mr. Speaker, next week our self-proclaimed education President will present his new education budget. Ironically, some 50 million illiterate Americans are capable of reading the President's lips but they are unable to read much of anything else. I want to challenge the President to truly be the education President. To end the rhetoric and make educational excellence a top priority. To hold a National Education Conference, as the White House did recently, and to refuse to discuss spending levels, made the conference almost irrelevant.

More than ever, America is challenged to keep pace with the technological advances and dynamics of the global marketplace. Our international industrial competitiveness is totally dependent on an educated, highly skilled workforce. Yet America's young spend less time on math and science than their foreign counterparts, and their test scores prove it. One of three high school students drop out before graduation. As a result, major scientific breakthroughs, almost all of which used to originate here, are now being developed elsewhere.

Let us get smart about education. Let us declare education's significance in the coming more technological world. Let us cut the defense budget, not only to reduce our crippling deficit but to promote economic strength by investing in critical education and research and development programs. American ingenuity needs a Federal commitment to put us back on top. Mr. President, we are anxious to hear your proposal.

PANAMANIAN SUCCESS DESERVES PRAISE

(Mr. KYL asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. KYL. Mr. Speaker, from our calendar I see we were to take up a resolution commending the service of U.S. personnel in Panama. I was looking forward to that. All America wants to express its thanks.

However, the resolution has been pulled from the calendar. The reason I am led to believe is the sponsors of the resolutions were unwilling to include the Commander-in-Chief among those to be commended.

If that is true, it is petty politics indeed. The operation in Panama was a great success, beginning with the decision to protect the American lives in the first place. All Americans performed in an exemplary fashion, and it is a sad day when we cannot commend our military personnel for their performance, and in some cases even sacrificed their life, because the President might get some credit, too.

I do not agree with the President all the time. I am not afraid to say so. By the same token, we and the overwhelming majority of Americans do agree we should not be afraid to say either, "Thank you, Mr. President," and thanks to the thousands of men and women who served this country so well in Panama.

LEADERSHIP EXPECTED FROM THE PRESIDENT

(Mr. NAGLE asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. NAGLE. Mr. Speaker, 1 year ago President Bush addressed a joint session of Congress.

He told us—and these are his words: "The people didn't send us here to bicker. It's time to govern."

He was right. But on this 369th day of the Presidency of the man who asked the American people to elect him because he'd be ready from day one to hit the ground running, it appears we need to also point out that the people didn't send us here to sit on our hands, either.

The list of issues George Bush talked about a year ago, but has done very little or nothing about since, is a long one: Education, the environment, homelessness, drugs, deficit reduction, improved trade competitiveness and a greater commitment to basic research. The list goes on and on.

I urge the President to use his State of the Union Address 1 week from today to start doing what only a President can do: Lead this great Nation.

If he didn't want to lead, why did he ask for the job in the first place?

Next Wedneday night, I think we cross the Rubicon. We've waited a year. The President needs to pick up that mantle, and start leading this Nation into some bold initiatives designed to improve the quality of life and raise the standard of living of the American people. Staying the same is not part of the American dream.

For 1 year, Congress has deferred to the President for leaderhip, for 1 year, that leadership has not been forthcoming. It is now clear: if the President won't lead, the Congress must. The American people expect their Government to be more than a disinterested bystander, at this time of enormous challenge for our country.

□ 1440

EXPRESSIONS OF APPRECIATION FROM THE ALOHA STATE

(Mrs. SAIKI asked and was given permission to address the House for 1 minute.)

Mrs. SAIKI. Aloha, Mr. Speaker, on behalf of the people of Hawaii, I want to express my appreciation to those Members who came to my State over the recess to take a hard look at some of the problems in paradise.

Well, Mr. Speaker, we make no apologies for having sunshine and warm weather in January. I only wish

the media had paid more attention to the serious issues of international drug trafficking and the protection of our coastal areas.

By the way, aloha casual attire in Hawaii doesn't mean going native. It means common local business attire, not bermuda shorts and sarongs.

We of the 50th State deserve to have our concerns heard by congressional committees, and I hope more committees will hold hearings in Hawaii in the future.

I want to personally thank the House Committee on Merchant Marine and Fisheries and the Select Committee on Narcotics Abuse for taking the time, trouble, and publicity to give the people of Hawaii a sense of hope and confidence that their concerns are indeed being heard by my fellow colleagues in Congress.

REMOVAL OF NAME OF MEMBER AS COSPONSOR OF H.R. 2273

Mr. WATKINS. Mr. Speaker, I ask unanimous consent that my name be removed as a cosponsor of the bill, H.R. 2273.

The SPEAKER. Is there objection to the request of the gentleman from Oklahoma?

There was no objection.

ANNOUNCEMENT BY THE SPEAKER

The SPEAKER. The Chair previously announced that it would receive five 1-minute speeches from each side. Further 1-minute speeches will be received later in the day.

EMERGENCY CHINESE IMMIGRATION RELIEF ACT OF 1989—VETO MESSAGE FROM THE PRESIDENT OF THE UNITED STATES (H. DOC. NO. 101-132)

The SPEAKER. The unfinished business is the further consideration of the veto message of the President of the United States on the bill (H.R. 2712) to facilitate the adjustment or change of status of Chinese nationals in the United States by waiving the 2-year foreign residence requirement for "J" nonimmigrants.

The Clerk read the title of the bill.

MOTION TO REFER OFFERED BY MR. MICHEL

Mr. MICHEL. Mr. Speaker, I offer a preferential motion and I ask for its immediate consideration.

The SPEAKER. The Clerk will report the motion.

The Clerk read as follows:

Mr. MICHEL moves to refer the bill, H.R. 2712, and the President's Memorandum of Disapproval jointly to the Committee on Foreign Affairs and the Committee on the Judiciary with instructions that the Committees consider the merits of the veto in light of events in China since passage of the bill and actions which the President has taken to protect Chinese students in the United States and promptly report their recommendations back to the House.

The SPEAKER. The gentleman from Illinois [Mr. MICHEL] is recognized for 1 hour.

Mr. MICHEL. Mr. Speaker, may I say that yesterday, when I alerted the House that I intended to offer this motion, the distinguished gentleman from Texas [Mr. BROOKS], Chairman of the Committee on the Judiciary, inquired as to whether or not this gentleman would yield half the time, as is the practice here at all times, to those who would oppose the motion, and I think their special request is that 15 minutes be yielded to the Committee on Foreign Affairs and 15 minutes to the Committee on the Judiciary.

I am noting that the chairmen of both of those committees are on the floor, and I would assume that is acceptable.

So, Mr. Speaker, to kick off the debate in support of the motion, I yield 4 minutes to the distinguished gentlewoman from my home State of Illinois [Mrs. MARTIN].

Mrs. MARTIN of Illinois. Mr. Speaker, I thank the gentleman for yielding this time to me.

Mr. Speaker, I rise in support of H.R. 2712, the Emergency Chinese Immigration Relief Act of 1989. But I also support the motion offered by our distinguished Republican leader [Mr. MICHEL] to refer the bill and the President's memorandum of disapproval to the Foreign Affairs and Judiciary Committees.

I support that motion because it contains explicit instructions to those two committees to promptly report back their recommendations after considering the events and actions which have occurred since the bill passed the Congress last November. In this connection I noted with interest that the Judiciary Committee in the other body held a hearing on this veto yesterday. I think we owe the same to ourselves and the President before proceeding with a vote on reconsideration. However, should this motion to refer fail, I will support the veto override motion. To do otherwise would send the wrong signal. I think the President and Congress are both interested in protecting those Chinese students in this country. They only disagree on the means.

Mr. Speaker, in the time remaining, I want to make as few points about the procedural situation we are in because of its relevance to the future. This does not directly affect the substance of the bill but the process under which we in the House have to share concerns for the future.

To refer to the committee with instructions to report back promptly is in conformity with the constitutional mandate that Congress proceed to the consideration of the vetoed measure. Referring a measure to committee without instructions to report back would leave the bill in a kind of legislative limbo, causing the kind of "uncertainty" in the public mind that the Supreme Court warned against in its 1929 Pocket Veto Case decision.

I have introduced legislation to ensure more congressional accountability on vetoed messages. H.R. 3462 would, among other things, require that immediately after a veto message has been read, the Speaker shall put the question on consideration of the vetoed measure, and no motion may preempt the previous question except one motion to postpone the override vote to a date certain, which shall not be more than 10 legislative days. Obviously, if the previous question is defeated, other motions would be in order, such as to table or refer.

Mr. Speaker, the second observation I would like to make is that while the President claims this was a pocket veto, he had the courtesy to return it to the Congress with his objections, thereby giving us an opportunity to vote to override. This is a departure from a minor bill he pocket vetoed in August, and I hope it indicates an accommodation with Congress on the pocket veto controversy.

As my colleagues may be aware, the administration is of the opinion that the President may pocket veto a bill at any time Congress is adjourned for more than 3 days, even when Congress has appointed agents to receive veto messages. The prevailing view in Congress is that he may only do so at the end of a Congress when he is truly prevented from returning a vetoed measure to Congress.

The Rules Subcommittee on Legislative Process, on which I serve as the ranking minority member, has reported legislation which attempts to clarify this issue. But, even if it is enacted it will only lead to more confrontation and litigation. It would be far preferable if the administration, by returning this bill, is signaling its intended practice in all future cases, since this in turn should obviate the need for legislation.

In conclusion, Mr. Speaker, I commend the President on returning this measure to the Congress with his objections so that we might exercise our constitutional prerogatives.

Mr. BROOKS. Mr. Speaker, I yield myself such time as I may consume.

Mr. Speaker, I oppose the motion to refer the President's disapproval message on the Chinese students visa legislation, H.R. 2712, to the Committee on the Judiciary. The committee has reviewed this matter in great detail. The bill itself has been considered three times by the House since the committee's deliberation and report to the House. On all three occasions, the bill has passed overwhelmingly. There is no debate on whether or not relief ought to be given to the Chinese stu-

dents who would be covered by its provisions. The debate focuses on whether the relief should be granted by legislative action by the Congress or by administrative action by the executive branch.

Further review of the substance of this legislation by the committee would serve no useful purpose except to delay a remedy which is needed now. Accordingly, Mr. Speaker, I urge my colleagues to vote against the motion to refer this matter to committee so that we may proceed to vote to override the President's ill-advised veto of H.R. 2712 and enact its protections now.

□ 1450

Mr. FASCELL. Mr. Speaker, I yield myself 2 minutes.

Mr. Speaker, I rise in opposition to the motion to refer H.R. 2712 jointly to the Committee on Foreign Affairs and to the Committee on the Judiciary.

This legislation has already gone through the traditional referral process in the House.

Under the rules of the House, it was clear at the time of referral that this legislation was exclusively within the jurisdiction of the Committee on the Judiciary.

Pursuant to rule X, the Speaker referred this legislation only to the Committee on the Judiciary because it amends the Immigration and Nationality Act.

If the legislation had contained matters within the jurisdiction of the Committee on Foreign Affairs, we would have requested referral at that time.

Since that original referral, there has been no change in the substance of the bill which would warrant a new referral. This is simply an open attempt to delay, frustrate, or kill a bill which has already proven that it has the nearly unanimous support of the membership of the House.

This legislation deals with a waiver of a home residency requirement for holders of certain kind of visas. This is an authority under the purview of the Attorney General, not the Secretary of State. As such, it is a matter under the jurisdiction of the Committee on the Judiciary, not the Committee on Foreign Affairs. I urge the defeat of the motion of the gentleman from Illinois.

Mr. MICHEL. Mr. Speaker, I yield 3 minutes to the distinguished gentleman from Pennsylvania [Mr. GEKAS], and at this time I alert my colleagues on the other side that, as the offerer of the motion, I will exercise my prerogative of closing the debate.

Mr. GEKAS. Mr. Speaker, I rise in support of the motion.

Mr. Speaker, the Congress is engaged in a game of chinese checkers, eager to jump over the President's prerogatives in establishing, and maintaining and executing foreign policy. For that reason alone we ought to be supporting and voting for the motion that has been presented by the minority leader.

But, if that were not enough, consider the other elements of this proposition.

Mr. Speaker, the gentleman from Illinois [Mr. MICHEL] insists, and I agree, that in his motion are contained references to committees which could look into the current developments on the mainland of China and with our direct relationships with the Chinese leadership. However, we want to criticize it for this action or that action.

My colleagues, it is imperative in these touchy times that the President of the United States be given latitude, discretion. I am not saying unfettered discretion. I am not saying loose ability to do anything he wants. But within the purview of establishing foreign policy discretion in the office of the President is paramount in the constitutional government that we have.

Mr. Speaker, for those reasons I say, "Let's end this game of chinese checkers. Let's resolve that it isn't necessary for the opposition to the President to show him up, to do one-upmanship on him, gamesmanship."

My colleagues, we are all in this together. We want to open the door to China. We want to give the students the right of remaining in this country, as does the President, but let us do it in the orderly, established manner which will do credit to the President and to the Congress at the same time.

Mr. BROOKS. Mr. Speaker, I yield 1 minute to the gentleman from California [Mr. MATSUI].

Mr. MATSUI. Mr. Speaker, today, for all the world to witness, Congress will speak loudly where the President would only whisper. Today, Congress is standing up with strength and conviction to the forces committed to crushing the democratic movement in China.

Our vote to override the President's veto of the Emergency Chinese Immigration Relief Act is not a vote to protect inspired partisan legislation. It is simply common sense.

A vote to override meets the absolute minimum standards of humanity and justice. It accomplishes what is obviously scrupulous. The very least we can do is affirm by law a principle which ought to go without saying: That the United States is a haven for those who face physical abuse and political oppression in their homeland.

Sadly, our President opposed that codification and vetoed our legislation. In doing so, he has sent a signal to the world that the implications of the brutality at Tiananmen Square are limited at best.

Today, we have an opportunity to repair that damage, to come to the aid of the students who need our protection, and to let the Government of China be clear as to our commitment to the students who perished in Tiananmen Square in their struggle to see democracy flourish in China.

I urge my colleagues to vote to override the President's veto, and I commend my colleague from California, Representative PELOSI, for persevering to see this important legislation through.

Mr. MICHEL. Mr. Speaker, I yield 3 minutes to the distinguished gentleman from Texas [Mr. SMITH].

Mr. SMITH of Texas. Mr. Speaker, I think we need to clear up some misconceptions.

First, Mr. Speaker, there should be no doubt about the President's position. The day after the massacre at Tiananmen Square the President made a public pledge to protect the Chinese students who were in this country and said that not one of them would be forced to return home. He has kept his pledge. The President, in fact, has already acted. He has issued an administrative directive which, as we sit here, protects the Chinese students who are in this country.

I think the real question here is, "The students are protected; what's the rush to override the veto of the President?"

Mr. Speaker, it is said that we need to send a message to Beijing, but we have already sent a message to Beijing. We did that by a 403 to zero vote last November. In fact, we could not have sent a stronger message, so why the rush?

Mr. Speaker, frankly it sounds suspiciously like a "bash President Bush brigade" is on the prowl.

My colleagues, supporting the Michel motion does no harm to the Chinese students who are in this country, but it does allow the correct legislative process to work, and it does allow the President to exercise his rightful and constitutional foreign policy authority.

Mr. FASCELL. Mr. Speaker, I yield 2 minutes to the distinguished gentleman from Pennsylvania [Mr. YATRON].

Mr. YATRON. Mr. Speaker, I am in strong support of overriding the President's veto of this legislation. H.R. 2712 would have eliminated the requirement that Chinese nationals return home for 2 years after finishing studies in the United States. Clearly, it is unsafe for these students to return to a regime that has so little regard for human rights. As chairman of the Subcommittee on Human Rights and International Organizations, I think this veto would hand each and every student forced to return to China a prison sentence.

Even though the President has rightly issued an order waiving the return requirement, who is to say that

the administration will not unilaterally revoke the waiver some time in the future to placate Beijing. An override of the President's veto will give Chinese students the assurance that he won't and establish a human rights policy toward China that the White House will not.

Mr. Speaker, over the recess we discovered that U.S. envoys were secretly dispatched twice to Beijing, contrary to the spirit of the President's assurances to the American public. The President is now in the process of undoing his own sanctions and supporting a resumption of international bank loans to China.

Concurrent with these recent Presidential actions, China has stifled its media, severely limited demonstrations, and imposed strict censorship against foreign journalists. Furthermore, according to Asia Watch, in recent months 18 intellectuals were arrested because of their association with the democracy movement.

Frankly, I see little positive change in China. In fact, Chinese authorities have imposed tighter restrictions on demonstrations than were already in effect. Over 500 detainees were recently released, but thousands more still languish in Chinese prisons without charge or trial. These moves by the Chinese Government should be taken for what they are: a symbolic gesture meant only for international consumption.

Mr. Speaker, by overriding the President's veto of H.R. 2712, we will send a message to the Beijing government and to the White House that the Congress has a very different view of the situation in China. It is a well-founded perception that the administration was "kowtowing" to the Chinese Government by sending secret missions there. The administration is applying a double standard when it comes to human rights abuses in China. We need to reassess our strategic and commercial interests in China and should do so with its record on human rights in mind. The override of this veto places the United States on the side of the oppressed, not the oppressors.

□ 1500

Mr. BROOKS. Mr. Speaker, I yield 5 minutes to the distinguished majority leader, the gentleman from Missouri [Mr. GEPHARDT].

Mr. GEPHARDT. Mr. Speaker, I rise, as I think we all will today, with the sense that none of us like to tell the President that we think he is wrong. It is never an easy vote to override a veto, but I believe in my heart, and I think most of the Members here do, that in this case the President is wrong. I know he has argued strongly that the administrative actions that he took are sufficient to see that the Chinese students who are in America are protected and, indeed, he did take some very significant actions.

There are two problems with that argument. First, those administrative actions are subject to lawsuit and legal attack by other people in the country, class actions and what have you, and could be rescinded in those legal actions, in which case the Chinese students would be at risk.

Second, administrative actions can come and go. They do not have the force of law, and I think everybody here, or mostly everybody here, when they vote will show that they want these rules and regulations to have the force of law.

Let us put aside the legal arguments, because as important as they are, they are largely irrelevant when we put this entire issue in the context of the foreign policy and the message that we want to send not only to the leaders of China but to people all over the world, and we also have to look at this vote against the other actions that the administration, beginning on or about July 4 of last year, took with regard to the repressive regime in China.

Winston Lord, who previously was our Ambassador to China, testified yesterday in the other body to a committee, and he said this: "As a concerned citizen, I am generally against congressional micromanagement of foreign policy and the rigidities often introduced by tactical legislation." He said, "As a Republican who admires the President, served him, and applauds his overall foreign policy, I regret having to oppose the administration." Then he said, "This is the reality. Fairly or unfairly, the veto, if sustained, would reinforce the mindset and the mandate of those who have proceeded from massacre to repression, those who predict America will be lulled by cosmetic gestures and return to business as usual, those who dismiss the Chinese as a people apart from the global winds of change."

Whether we want to believe it or not, whether we want to accept it or not, this decision today sends a loud, clear message to the leaders in China about what we believe and what people all over the world believe about human rights, and it sends a message to the leaders in the Soviet Union, the leaders in East Germany, the leaders in Czechoslovakia, and in all the countries across the world that are in a state of change that business as usual is OK. I think we believe, I know I believe, that business as usual is not OK.

We have an obligation as Members of this Congress representing our people, as representatives of the American society that stands for human rights here and across the world, to unequivocally state what we believe about what these leaders did.

Mr. Speaker, it is not good enough to send leaders there 4 weeks after the acts in Tiananmen Square. It is not good enough to send our top leaders there to clink champagne glasses 6 months after the acts. What kind of message do we want to send to the world? Do we want to say, "It is OK what you did?" Or do we want people to remember the single man who stood in front of the tank and said, "China must stand for democracy," and one man can stand up for those human rights.

Bobby Kennedy said, "If a single man plants himself on his conviction, the huge world will come round to him."

We have a chance today to bring America around to that man who stood alone in Tiananmen Square and said, "Democracy must come to China."

Vote not to refer this to committee and vote to override the veto and stand for human rights.

Mr. FASCELL. Mr. Speaker, I yield 2 minutes to the distinguished gentleman from New York [Mr. SOLARZ].

Mr. SOLARZ. Mr. Speaker, I rise in strong opposition to the Michel motion.

A little bit earlier today, the President said at his press conference that if his veto was overridden it would result in a decision by China to retaliate against the United States by canceling many, if not all, of the academic exchanges between our two countries. If this assessment is, indeed, accurate, then it would clearly constitute a compelling argument in favor of the Michel motion and in favor of the effort to sustain the President's veto.

I believe, however, that the President's analysis is fundamentally mistaken. The leaders of China may be brutal, they may not be interested in human rights, but they are not dumb. They can read. Because they can read, they surely know that the protections provided in the President's own executive order for the Chinese students are roughly parallel to the protections provided Chinese students in the Pelosi bill. If the Chinese are going to retaliate because we pass the Pelosi bill, they will also retaliate because of the President's executive order. If this is the case, we might ask why then pass the bill.

We need to pass the bill because on the issue of China the President has lost his credibility. If the President can send some of the most senior foreign policy and national security officials in his administration to Beijing at the very same time that he is telling the American people that he suspended all high-level contacts, then he simply cannot be relied upon not to rescind the executive order at some point in the future if this veto is sustained.

In order to provide enduring guarantees to the 40,000 Chinese students in America who fear for their careers and

possibly even for their lives if they should be obligated to return, we need to defeat this motion and override the President's veto when the vote comes before us.

Mr. BROOKS. Mr. Speaker, I yield 1 minute to the gentleman from New Mexico [Mr. RICHARDSON].

Mr. RICHARDSON. Mr. President, we know you are popular because of foreign policy, but your policy on China stinks.

President Bush's veto of the Chinese student protection bill is wrong, wrong, wrong. It is wrong because it gives the wrong signal to the repressive Communist regime in Beijing, the butchers of Tiananmen. It is wrong because the Bush administrative directive is without any legal foundation and does not provide the Chinese students the protection they seek. It is wrong because it tells those around the world wanting freedom, run by repressive regimes, that the United States will sell them out for geopolitical reasons.

It is a shame that we kowtow to the Chinese with secret trips, winks, and pats on the back.

Mr. President, with all due respect, you are wrong on this one.

Mr. Speaker, I rise today in strong support of overriding the President's veto of H.R. 2712, the Emergency Chinese Students Immigration Relief Act.

Mr. Speaker, I am certain none of us has forgotten the moving and historic scenes of last May and early June. Scenes of hundreds of thousands, indeed millions, of Chinese of all ages peaceably calling for reform of a corrupt and despotic government. Led by the brave students who occupied Tiananmen Square, the Chinese people rose and demanded a say in their nation's future. The Chinese Government's response was brutal and inhuman. The storming of Tiananmen Square remains one of the most terrifying events in modern times.

But as remarkable, tragic, and unforgettable as these events were, I am not certain the Bush administration truly remembers what took place in Beijing last spring—truly understands what the Government of China is capable of doing. We recently learned that weeks after the massacre, Gen. Brent Scowcroft traveled to China. This was followed by a second visit late last year. The President claims these visits were meant to underscore his concern regarding the Chinese Government's actions. If this was the case, why was it kept from Congress and the American people? Clearly, the events of last spring did not make a great enough impression on this administration.

The President further claims that his administrative directive is sufficient to protect the Chinese students. This directive, however, is without legal foundation and lacks the strength of law. Moreover, what is most frightening to the students is that the President's directive is discretionary and can be lifted at a moment's notice.

In light of the President's continued equivocation on this matter; in light of the administration's pursuit of business as usual with China; in light of the administration's cozy relationship with the butcher's of Beijing; any administration action aimed at protecting the Chinese students is suspect and should be regarded with the highest skepticism.

The President is concerned that this legislation will send the wrong signal to the Chinese Government. He could not be more incorrect. Overriding this veto sends a clear and correct message to Beijing—the United States stands alongside those who peaceably rise against oppression and cry out for democracy, and has no tolerance for governments which massacre those who peaceably demand change.

This is the message we should and will send, Mr. President. It is not the wrong signal; it is what this Nation stands for. I urge my colleagues to vote in favor of overriding the President's veto and affording the Chinese students the protection they certainly deserve.

Mr. FASCELL. Mr. Speaker, I yield 2 minutes to the distinguished gentleman from New York [Mr. SCHEUER].

□ 1510

Mr. SCHEUER. Mr. Speaker, although the President's Executive order technically may have accomplished much the same as our bill that the President vetoed, in practical point of fact the signal that it sent, the message that it sent, both to the murderous Mandarins running mainland China today with a cruel fist, as well as to the students in our country of Chinese descent who live in daily fear that they will be delivered forcibly to a vengeful Chinese Government, it was a message a world apart.

Our former Ambassador, our brilliant Ambassador to mainland China, Winston Lord, testified only yesterday to the Senate Judiciary Committee that, "There is no question that today Chinese students in the United States feel uncertain, uneasy, and vulnerable. It is best to remove all doubts by the unambiguous means of legislation. Those who have lived in China where laws do not protect the individual seek security in the laws of the United States that do. Passage of legislation would fortify the students psychologically as well as legally."

The Washington Post noted at the time of the President's veto that the Chinese have a word for that kind of gesture: "kowtow," the touching of the forehead to the ground in servile, supine acquiescence.

Mr. Speaker, that Presidential veto, that kowtow, sent a message that is demeaning to our country. Today we should wipe the slate clean and send a message loud and clear, not only to the Chinese students in our country, not only to the aging tyrants who made the decision that resulted in Tiananmen Square, but to people around the world, that we stand for freedom. We will protect these kids. That is the message we must send today.

Mr. BROOKS. Mr. Speaker, I yield 3 minutes to the distinguished gentleman from South Carolina [Mr. DERRICK], a member of the Committee on Rules.

Mr. DERRICK. Mr. Speaker, I urge Members to vote to override the President's misguided veto, for two reasons.

First, we simply cannot in good conscience force Chinese students in the United States on J visas to go home to face repression. Many of the students support the democracy movement and have spoken out loudly and vigorously against the evils of Communist dictatorship. The Chinese Government has harassed them here and their families in China. After June 3, it isn't hard to imagine what Beijing has planned for them if they come home. I assure you the American people want no part of it, and rightly so.

Second, Mr. Speaker, there is an important institutional aspect to this issue. The President says we have no constitutional right to reconsider this bill because he has "pocket-vetoed" it. In his message Mr. Bush claimed that the adjournment of Congress "prevented" him from returning the bill within the meaning of article I, section 7 of the Constitution. He also claimed that by withholding his approval he had "precluded" it from becoming law, but that he was returning it to the House because of court decisions raising questions about when the pocket veto applies.

The courts have ruled a President may not use a pocket veto during adjournments within or between sessions of Congress. However, the administration refuses to accept these rulings. The Justice Department testified at a hearing last year in my subcommittee that the President can pocket veto a bill whenever its House of origin is adjourned for more than 3 days. This is absurd. Surely there is no Member of this House who believes that a President should be able to pocket-veto bills over a long weekend, but that is Mr. Bush's position. My subcommittee recently approved legislation codifying the court rulings, which we intend to bring to the floor very soon. I hope all Members will support it.

Mr. Speaker, Congress clearly has both the constitutional right and the moral duty to override this veto today. Democracy is breaking out all over the world. Let's not support the forces of darkness, brutality and repression by sending these students home. Let's show the world this Congress stands up for freedom. Let's show the White House this Congress stands up for its rights under the Constitution. Let's override this veto.

Mr. MICHEL. Mr. Speaker, I yield 5 minutes to the distinguished gentleman from Georgia [Mr. GINGRICH], the minority whip.

Mr. GINGRICH. Mr. Speaker, I thank my leader for yielding me the time. I am going to vote to override the President's veto today. I announced that last week. I feel that Members do have a constitutional obligation to do that.

I am also going to vote for the motion of the gentleman from Illinois [Mr. MICHEL]. I want to explain briefly why I think it is reasonable to spend a week or two asking the Committee on Foreign Affairs and the Committee on Intelligence and other committees to review things.

I found myself just as we prepared to come back home and we were all out around the country, we were looking around and talking to people. As I sat in Douglasville, GA, in Carrollton, GA, in Jonesboro, GA, I had a chance after Christmas to listen to people.

Then I said, now we are all going to come to Washington. It suddenly occurred to me one afternoon, and I think this is an important thing for Congress to realize, that the world had changed dramatically since we left here in November. Romania had lost its dictatorship in an extraordinarily bloody cycle of events. The Soviet Empire changed substantially. The Azerbaijani rebellion all occurred since then. The process of change in Panama had been decisive with an American victory and a victory for freedom and against the drug dealers. Place after place around the planet, things changed.

In China there is a process going on. I thought what could better illustrate the willful ignorance of Congress than to rush back to Washington, and within 24 hours of arriving, decide that it could not stop and investigate, it could not have closed hearings to receive any testimony by the administration, it could not contemplate; but instead, relying on newspaper reports, relying on Christmas cards from Chinese students, relying on the passions of the moment as we remembered it the day we left, when we voted.

There is no question in my mind that the President has made a mistake. There is no question in my mind that in fact if we are going to vote to override the veto, it should be an override.

I just found it intriguing that we had to schedule this the opening week and that it had to be characterized by some people as a partisan scheduling on the part of the Democratic leadership to score one on the President.

Let me just say two things in closing about all this: In the first place, a man with 80-percent approval can probably be overridden and he will not be crippled dramatically. He might shrink to the levels of Roosevelt, to the more normal levels of Eisenhower and Roosevelt. In the second place, we will not dramatically change things.

I just want to note for my colleagues, I hope the Democratic leadership does not plan to start a whole series of partisan snipings, of which this week's schedule is an example. I think it is regrettable that they pulled the resolution on Panama, which should have been here and we understood yesterday was going to be here. I think that would have been bipartisan and positive and the American people would have supported it.

I think it is regrettable that it was decided to schedule this, and that it has been described so openly in the press as a partisan effort.

So, Mr. Speaker, I am going to vote for this motion on two grounds. First, to send the signal that on an issue that is still going to be relevant in 2 weeks, an issue where the President already personally by administrative fiat has taken care of any concerns of the students, has already protected them, that it would not have been inappropriate for Congress to wait 2 weeks to let the committees report. And the truth is the committees could not have reported during the previous period because they were not here. They could not have gotten a quorum and had a meeting.

Symbolically, first I think it is useful for the legislature to try to be informed occasionally, especially when the world is changing as fast as it has in the last 60 days.

Second, I want to send a message to my friends in the Democratic leadership. It is going to be a long season if we get to petty partisanship, if we pull a resolution on Panama that should have commended the President of the United States, that should have applauded the men and women in uniform who did the right thing, if we pull that and leave standing only a veto override in the narrowest of partisan ways.

Mr. Speaker, I hope my friends on the Republican side will vote for this motion, and those Democrats who think Congress should slow down and take a look and get briefed occasionally, they may want to vote this way too.

Mr. BROOKS. Mr. Speaker, I yield 1 minute to the gentleman from Georgia [Mr. JONES].

Mr. JONES of Georgia. Mr. Speaker, in these past few months we have seen historic images of change and courage and hope. We have seen the image of free people celebrating on the ruins of the Berlin wall. We have seen, too, the image of a young Chinese man facing a convoy of tanks in an act of defiance that spoke for all mankind. And we have seen the darker image of American diplomats lifting a cynical toast to the brutal Communist ideologues who had crushed the life out of their brightest children.

Today we have the opportunity to create another image—as we, representing the sentiment of a Nation, reaffirm through law the basic decency of the American people, and the basic fairness of our moral imperative. Let us send a clear and simple marker about the American character to the butchers of Beijing.

In doing so, we will also send to freedom loving people throughout the world an unequivocal message: we stand for human rights. Let us defeat the motion to refer, let us override this unfortunate veto, and let us lift no more toasts to tyrants.

□ 1520

Mr. FASCELL. Mr. Speaker, I yield 2 minutes to the distinguished gentleman from Maryland [Mr. HOYER].

Mr. HOYER. Mr. Speaker, I thank the gentleman for yielding.

Mr. Speaker, I rise in opposition to the motion which I think is well intended and I understand the minority whip's proposition that we could take 2 weeks to look at this. There is, though, I believe no one in this body who believes that looking at this in 2 weeks would change the opinion of any Member of this body who represents the people of this country who were outraged, justifiably so, by the events in Tiananmen Square.

I suggest to you that perhaps people told Andrei Sakharov to wait, take 2 weeks to consider whether human rights violations were worth standing up against. Perhaps the people in Rumania were told that as well.

Vaclav Havel, who spent 5 years in prison in Czechoslovakia, I am sure was told many times, "wait."

It is time to act now, it is time, with a clear and I hope unanimous voice, state to those in China as we have done over and over again, not on a partisan fashion but together, the Soviet Union and the Communist bloc in Europe, "We stand in united opposition to violations of human rights in the Soviet Union."

Indeed our President, President Reagan said that the then Soviet Union at the time he said it was the evil empire. It is perhaps China that now stands most dramatically in that position.

This is not a time to temporize, this is not a time to delay, it is a time to act. Let us speak with a strong voice and override this misguided veto.

Mr. FASCELL. Mr. Speaker, I yield 2 minutes to the distinguished gentleman from California [Mr. ANDERSON].

Mr. ANDERSON. Mr. Speaker, I thank the gentleman for yielding time to me.

Mr. Speaker, I would like to commend the gentlewoman from California [Ms. PELOSI] for her leadership on this bill. Her dedication to bringing this important bill back to the floor is greatly appreciated by us all.

This vote to override President Bush's veto is a vitally important step

in continuing this country's commitment to democracy around the world. The United States, as the leader of the free world, must show to our neighbors that our promise to those fighting for freedom is expressed in actions and not just words. We have a long standing commitment to be a haven for those fleeing repression. This vote is an expression of that promise. As such, I am proud to voice my support for a bill that will allow Chinese students to stay in this country. I urge my colleagues to join forces in overriding President Bush's veto of this imperative legislation.

Mr. BROOKS. Mr. Speaker, I yield 1 minute to the gentleman from New York [Mr. SCHUMER].

Mr. SCHUMER. Mr. Speaker, I would say to the President: Mr. President, your approval ratings may be skyrocketing, but that will not stop Congress from doing the right thing on the Chinese student visa issue. This House and the American people will not stand by and watch these students returned to the butchers of Tiananmen Square should your administrative remedies fail.

We in Congress respect your desire to maintain flexibility in conducting foreign policy. But we do not believe that the thousands of Chinese students in the United States should be pawns in an international game of chess with China.

This country was electrified by the courage and passion of the throngs of students who took on their repressive government and its tanks. With their efforts for reform brutally smashed, these students deserve our assurance that they will not be returned to their oppressors.

Congress gave that assurance by passing H.R. 2712. Mr. President, your veto of the bill has sent the opposite message.

Now is not the time to flex your muscle in the name of executive discretion. Now is the time to send a clear signal that the United States will not tolerate repression; that the United States will stand firmly behind the courageous men and women who struggle for freedom around the world.

You may be willing to gamble that your administrative remedies are sufficient. But if they are not, Mr. President, you would have to stand up and tell each Chinese student that they will have to go back to horrible repression because you guessed wrong.

Only by enacting H.R. 2712 will we ensure that these students do not become sacrificial lambs at the hands of those who bloodied Beijing.

Mr. President, pave the way to better relations with the Chinese Government, but not on the backs of their students. I urge my colleagues to override the President's veto and enact H.R. 2712.

ANNOUNCEMENT BY THE SPEAKER

The SPEAKER pro tempore (Mr. KILDEE). The Chair will remind Members that under the rules they must direct their comments to the Chair and only to the Chair, and not directly to the President in the second person.

Mr. FASCELL. Mr. Speaker, I yield 2 minutes to the distinguished gentleman from Pennsylvania [Mr. KOSTMAYER].

Mr. KOSTMAYER. I thank the Chairman for yielding.

Mr. Speaker, this is not a question of who favors deporting Chinese students to China and who does not. No one favors that. That is not the President's policy and to suggest that it is would be unfair to the President.

I think the issues are more subtle than that.

Our Government policy really should have two objectives: No. 1 to change Chinese behavior and number two to continue this relationship between the two countries.

There are really two approaches: First is the President's approach which is the carrot approach; the other is the congressional approach which includes tough sanctions.

I think both approaches are very difficult to make work. I do not know whether either approach can work. I do not know whether the President's policy or the policy enunciated by the Congress in this override effort can change Chinese behavior. I think the Chinese may in fact react against congressional pressure. But what I do think is that the Chinese cannot really moderate their behavior.

I think therefore the President and the Congress are fooling themselves when they suggest the Chinese can moderate their behavior when either a carrot or a stick is applied.

If the Chinese do moderate their behavior, if they let this genie out of the bottle they know it is all over for them.

Once democracy begins to spread in China I think that genie cannot be put back in the bottle. Therefore, I think it is in our interest to recognize that change is coming. Democracy is coming to China. Nobody knows how long or how soon it will be, but when it comes let it be said that America stood with the students and with democracy in China.

The SPEAKER pro tempore (Mr. KILDEE). The time of the gentleman from Texas [Mr. BROOKS], has expired.

The gentleman from Florida [Mr. FASCELL] has 3 minutes remaining and the gentleman from Illinois [Mr. MICHEL], has 17½ minutes remaining.

The gentleman from Illinois has the right to close debate.

Mr. FASCELL. Mr. Speaker, I yield 2 minutes to the distinguished gentleman from California [Mr. LEVINE].

Mr. LEVINE of California. Mr. Speaker, I thank the distinguished Chairman for yielding.

Mr. Speaker, I want to speak against the motion to recommit and in strong support of the override.

Mr. Speaker, it is disgraceful that Congress must even consider overriding a veto on an issue as basic as the health and safety of the Chinese students in the United States. Sadly, however, the administration has turned a cold shoulder to their fate.

Without the waiver created in this bill these students, upon completion of their studies, will be required to return to China, a country that still has not expressed remorse over the killing of hundreds of its own people. Defeat of the override can only mean two things: The students will have to go home to a dangerous welcome or risk staying in America illegally.

I cannot imagine imposing such a harsh and unnecessary fate upon the students.

Has the American sword of justice become so blunted that we will not afford simple physical protection to thousands of innocent people? Mr. Speaker, the time has come to stand up for democracy. The time has come to stand up for the brave young Chinese students who were massacred in Tiananmen Square.

The time has come to stand up to the President and to override his veto on this issue.

Mr. Speaker, the time has come to send unequivocally, on a bipartisan basis, a message to the people of China that both Democrats and Republicans alike, people from throughout America, regardless of political persuasion, support the aspirations of democracy in China, support the students who supported democracy in China and reject the brutality that was seen in Tiananmen Square.

□ 1530

Only by overriding this veto, and only by refusing to send this bill back to committee can that message be so demonstrably communicated, as it must be.

Mr. MICHEL. Mr. Speaker, I yield 1 minute to the gentleman from Florida [Mr. FASCELL].

Mr. FASCELL. Mr. Speaker, I yield 1 minute to the gentleman from Missouri [Mr. VOLKMER].

The SPEAKER pro tempore (Mr. KILDEE). The gentleman from Florida has 2 minutes remaining, and yields 1 minute to the gentleman from Missouri [Mr. VOLKMER].

Mr. VOLKMER. Mr. Speaker, today's task is simple. We choose between freedom and liberty on one side, tyranny and murder on the other. Today we tell the Chinese leaders that America does not stand for government-sanctioned murder. Unfortunate-

ly we must also send this message to the White House.

When we talk about the leaders of China, let's be clear. We are talking about murderers. We are talking about those who ordered the tanks to run down and gun down students. We are talking about those who want Chinese students returned from this country so that the Chinese version of fair punishment—murder—can be carried out.

George Bush is wrong when he says he can deal with these tyrannical murderers using reason and diplomacy. You can't reason with mad dogs, Mr. President. You can't respond to the flowing blood of dead students with a toast of red wine.

The President is wrong. We know it, the American people know it.

Vote for the veto override. Save the President from his mistake. Save the Chinese students. And save America from sanctioning tyranny and murder.

Mr. MICHEL. Mr. Speaker, I yield 5 minutes to the distinguished gentleman from Iowa [Mr. LEACH].

Mr. LEACH of Iowa. Mr. Speaker, I thank the distinguished minority leader for yielding time to me. I rise to review the issues. There are two issues before Members today. One is of substance; one is of symbolism. On substance, this is the strangest, most peculiar veto override circumstance in the memory of this Member. Congress passed a bill to implement a narrow change in immigration policy relating to Chinese students in this country. The President, by Executive order, implemented the policy but vetoed the legislation. In one sense, the veto was gratuitous; in another sense, the override effort is equally gratuitous. In a policy way, the result is the same, whatever the override result.

In a more positive sense, it is key to note that both the executive and legislative branches have good reasons for their actions. Congress passed compassionate legislation. The President had a very thoughtful reason to veto that legislation, his concern not only for students in this country at this time, but that we might not be able to obtain future students based on exchanges.

I stress the good intentions all around because at a symbolic level, some suggested that the veto override represents a quasi-vote of no confidence on the President's policy. I believe this vote should not be considered in that context. As a Member who believed Congress was right to pass the Pelosi bill, that the President was justified to veto it, but Congress nonetheless, correct in moving to override; I would like to stress that the balancing factor is the appropriateness of Congress taking the lead role in immigration policy, and the necessity of this body as a barometer of American values not being coerced by octogenarian oppressors in Beijing.

As for the President's broad demarche, I am convinced partisans are premature in criticism. In this regard, this body should not underestimate that modest, positive results appear to be unfolding. In the wake of the Scowcroft visit, Beijing agreed not to sell M-9 missiles to the Middle East, lifted martial law, agreed to reallow the presence of Voice of America in China, it commenced discussions on a wide range of Fulbright and Peace Corps programs, and released a small number of political prisoners. Skeptics are correct in suggesting that fundamental changes have not occurred. However, in all likelihood, without President Bush's bold gambit, none of the above would have happened. Good news is good news, even if it is not extraordinarily good news.

In this context, there is one aspect of the Scowcroft mission that I want to stress above any other. This week, serious negotiations are under way among members of the Security Council of the United Nations, to secure an international solution to the Cambodian issue.

Without the Scowcroft visit, serious cooperation with the Chinese, who hold not only a veto in the Security Council, but the most powerful card in Southeast Asian politics, would be impossible. Because of the Scowcroft mission there is a possibility, albeit slim, of an international breakthrough to prevent Pol Pot from returning to power. Because of the Scowcroft visit there is also a powerful prospect that a cooperative model could be established for Third World intervention in a peaceful way in other settings.

Given Chinese history, I think all Members in this body should understand that for the majority to be too critical of an effort to maintain direct, high-level contact with senior Chinese leaders is ironic if not dangerous. It is ironic because liberals for 20 years insisted on public recognition and diplomatic intercourse with the Mao Zedong's China, and now object to serious quiet discussion with Deng Xiaoping's government.

It is dangerous because Pol Pot and the Khmer Rouge are today closer to achieving a decisive military and political advantage over the militarily inept Cambodian Government of Hun Sen.

To conclude, I would like to emphasize that on the narrow issue of immigration policy, philosophically this veto override might be considered to reflect a healthy competition between coequal institutions of government as well as political parties. In a sense it may be seen as a celebration of a healthy aspect of American politics, a bipartisan and bi-institutional desire to do right by 73,000 Chinese students, especially the 40,000 among them who hold "J" visas.

However, I stress that competition for good government can contain seeds of destructiveness if Members of this body, particularly the majority, play politics with the broader aspects of the administration's admittedly high risk policy. My own sense is that the wise, thoughtful approach today is to give the gentleman from Illinois [Mr. MICHEL] the benefit of the doubt, to bring this issue back to the floor in a more consistent, coherent, and bipartisan fashion, but under any and all circumstances, this body is going to have to make it clear to the Chinese students that we will stand behind them.

Mr. MICHEL. Mr. President, I yield 1 additional minute to the gentleman from Florida [Mr. FASCELL].

Mr. FASCELL. Mr. Speaker, I yield my remaining 2 minutes to the distinguished gentleman from Ohio [Mr. TRAFICANT].

Mr. TRAFICANT. Mr. Speaker, history will reflect that Ronald Reagan was the best American President Japan ever had. They truly loved him. I say here today if President Bush's veto is sustained, President Bush will be remembered as the greatest American President that the Chinese Government ever had. Not the people of China, but the Government. The Government that murdered innocent people, who sought freedom. They shot them down. They have put thousands in jails. What is even worse, what flies in the face of this debate, until this day the Chinese Government will not even admit the massacre, nor admit the fact that they have detained illegally so many Chinese citizens.

Now, maybe our President is going to kowtow to a repressive Chinese Government, but this Congress should not. It is time to put your vote where you rhetoric is. If America stands for self-determination, it stands on the side of people who seek freedom, then we override this veto today. Anything short of that is un-American.

I commend the gentlewoman from California [Ms. PELOSI] for her fine effort, and the respective chairmen.

The SPEAKER pro tempore. The gentleman from Illinois [Mr. MICHEL] has 2½ minutes remaining.

Mr. MICHEL. Mr. Speaker, I am not altogether sure it was in my best interest to yield the extra minute to my distinguished friend, the gentleman from Florida [Mr. FASCELL]. However, I will give Members a much more rational argument why Members ought to support my preferential motion here today, and in the event that it does not pass, I want to make it quite clear that I will be voting to sustain the President's veto of the legislation.

I am going to begin my remarks here with a quotation which is not my own, but is very appropriate for the occasion.

It reads as such:

There are many practical reasons why the President must keep in contact with the present Chinese leadership no matter how distasteful such contact is for himself and the other American people. There is simply no other alternative if we want to get things done. By maintaining contact the President cannot right the wrong that has already been done but he may be able to prevent that gang of power-mad old men in Beijing from inflicting more madness on the Chinese people and the civilized world.

□ 1540

Mr. Speaker, the words I have just read are not, as I said, my own. They are the words of Nien Cheng, author of "Life and Death in Shanghai," a memoir of her survival as a prisoner of the Chinese Communist Government.

I do not know where Nien Cheng stands on the bill, H.R. 2712, but her words remind us that what is at stake here is not just an immigration policy but the way the United States conducts foreign policy.

I am glad, at long last, to see universal concern for human rights in China. When we opened relations with the China of Chou En Lai and Chairman Mao, those who told us of the tens of millions of innocent victims of Chinese Communists were scorned as not being "pragmatic." But because of foreign policy considerations, we went ahead and established relations with the bloodiest dictatorship in the world, and many of those now criticizing President Bush applauded the opening to China of Chairman Mao and Chou En Lai.

I mention this only to clarify a point that I am sure will be made later on in the debate on the actual veto message.

Some who want to override the President's veto will say that the President is insensitive to the Tiananmen Square massacre, but under our system an American President has to keep in touch with friend and foe alike, and some may be down right bloody dictators.

In 1941 Stalin had more innocent blood on his hands than Hitler, but President Roosevelt embraced him at the time in the long-range best interests of the United States.

Well, you might say: "But that was war."

I say that our relationship to China will have a bearing on the next 50 years of world history. We have to keep the lines of communication open and let those who decried the opening to China on human rights grounds cast the first stone. Let those who say we should not have embraced bloody Stalin lecture to us on morality.

I voted for H.R. 2712 with the overwhelming majority of our colleagues because the principles at the heart of our bill reflected our universal desire to help the Chinese students in the United States.

Incidentally, I do not know how many other Members out there received as many Christmas cards from Chinese students around the country at the various universities as I did—they were very touching—thanking us for what we had done. They have a real network in this country, and I appreciated their taking their time to send Christmas cards in appreciation for our expressing our point of view.

It was a magnificent gesture of compassion and concern for us to have adopted the legislation initially, but fine gestures are not substitutes for sound policy.

Some may argue that the situation in China is still bad, and of course it is. No one is denying that. My point is not that things are better, only that they are different and more complex with the passage of time, and we owe it to the American people to analyze the differences. No Chinese students in the United States and no principle of human rights will be sacrificed by a thorough re-examination of the current situation. It may well be that after such an examination we could decide to take different, perhaps even more wide-ranging action. And let me repeat—there will be no danger to the Chinese students if we take a second look. They are already protected by the President's directive.

Principled, effective foreign policy demands commitment to the long run, to hard work, often behind the scenes, sometimes involving compromise, sometimes involving confrontation. It sometimes involves, frankly, holding your nose with one hand while extending the other.

President Bush knows China, I would say, as well as, if not better than, any Member of this House of Representatives. He knows her people. He knows their special traits, and he must be given the room to make the foreign policy moves he feels are in the long-range, best interests of our country.

Since the goal of the President and of the Congress is the same, that is, protecting the Chinese students, and since the students are now protected, why not take the extra time and effort to re-examine what we have done?

Surely we owe it to the Chinese students and to the American people to show that democratic government involves the willingness on the part of the Legislature to admit it can perhaps do a better job.

Mr. Speaker, I ask support for our motion to refer this matter to both the committee on Foreign Affairs and the Committee on the Judiciary.

Finally, Mr. Speaker, I would like to include at this point in the RECORD three letters reflecting the views of 22 Chinese-American organizations in support of the President's veto.

JANUARY 22, 1990.

Hon. GEORGE MITCHELL,
U.S. Senate, Washington, DC.

DEAR SENATOR MITCHELL: We applaud and support the President's decision to withhold approval of H.R. 2712, the "Emergency Chinese Immigration Relief Act of 1989."

The relationship between the United States and China has been difficult since June 1989 and the positive steps taken by President Bush to normalize relationship with China is serving the best interest of this nation. An override of the Presidential veto at this time will definitely send the wrong message to the leadership in China about American intentions. It will also complicate a very sensitive situation, not to mention the negative effect of limiting the President's ability to conduct diplomacy.

We strongly believe that the Presidential Directive makes H.R. 2712 totally unnecessary. We also believe that the Presidential Directive provides broader and better protection for the Chinese students. We also oppose legislation that put America in a straightjacket and Congressional actions that limit options available to the Executive Branch in responding to changing circumstances.

The President has acted in the long term best interest of America. We urge Congress NOT to override the Presidential decision to withhold approval of H.R. 2712.

Sincerely,

Samuel T. Mok, Hun J. Goon, Lawrence T. Tom, Yen-Den A. Chen, the Chinese Consolidated Benevolent Association of Washington, DC.

Alfred Hong, Chinese American Citizen Alliance.

Barry Tien, New Jersey Asian American Political Coalition.

Julie Rao, Asian American Congressional Forum.

Robert Kwok, Chinese American Music Society.

Heo-Peh Lee, Chinese American Political Action Association of New York.

Grant Moy, attorney, Bethesda, MD; Rev. Man-King Tso, Baptist Church, Georgetown, Wash., DC; Rev. Jonathan Liu, Chinese Bible Church, Rockville, MD; Daniel Ho, professor, Wash., DC; Patrick Sung, attorney, Arlington, VA; Dr. Robert Kwok, M.D., Silver Spring, MD; Eleanor Wang, businesswoman, Annapolis, MD; Homer Chen, engineer, Wash., DC; Dr. Grace Shu, Williamsport, PA; Dr. Robert Hsueh, attorney, Dallas, TX; Professor Chi Wang, Wash., DC; Nelson Lee, businessman, Silver Spring, MD.

THE GUANGDONG BENEVOLENT ASSOCIATION OF GREATER WASHINGTON,
Washington, DC, January 19, 1990.

Hon. GEORGE MITCHELL,
Senate Majority Leader, U.S. Senate, Washington, DC.

DEAR SENATOR MITCHELL: The Guangdong Benevolent Association of Greater Washington and the following organizations wish to convey to all the United States Senators a message. The organizations are:

Chinese American Communities of USA.

National Association of Chinese Americans, Washington, DC.

The Fujian Residents Association, Washington, DC.

Associated Organizations of Chinese American Heritage, Washington, DC.

American Center for Medical Sciences.

American Chinese Freemason Society.

Moy's Association.

Chinese American Chamber of Commerce, USA.

The Gee How Oak Tin Association.

China Reunification Alliance, Washington, DC.

KiangSu Residents Association.

The message is a simple one.

We believe the President did the right thing when he withheld approval of the Emergency Chinese Immigration Relief Act of 1989. We also believe that an override of this Presidential decision will not serve the best interest of United States, China, and the Chinese students in this country. As Chinese Americans, we speak with compassion for these students. As American taxpayers and voters, we speak with the interest of United States in mind. An override will endanger longterm relationship between China and the United States. It will also mislead the Chinese Government about the intentions of the American people and their perception of President Bush.

Please DO NOT allow the override of the President's decision on H.R. 2712 to take place.

Respectively,

DOUGLAS TOY,
Chairman.

JANUARY 22, 1990.

PRESIDENT GEORGE BUSH
The White House, Washington, DC

DEAR MR. PRESIDENT: We are writing this letter to support your position and policy regarding the Chinese students present in the United States. We know you would never allow any action that would force the return of Chinese students if their lives or liberty are in danger. We know you have firm commitment and are supportive of the humanitarian principles that Chinese students are fighting for. We think your Executive Order provides immediate and broader protection than H.R. 2712.

Therefore, we strongly support your memorandum of disapproval issued on November 30, 1989. You have a long record being a supporter of fighter for human rights. We firmly believe that you and America will always stand with freedom-loving men and women around the world.

Respectfully yours,

Dallas Asian-American Chamber of Commerce.

Dallas Asian-American Voters Coalition.

Chinese Lions Club.

Chinese Chamber of Commerce.

Mr. Speaker, I move the previous question on the preferential motion.

The previous question was ordered.

The SPEAKER pro tempore (Mr. KILDEE). The question is on the motion offered by the gentleman from Illinois [Mr. MICHEL].

The question was taken; and the Speaker pro tempore announced that the noes appeared to have it.

Mr. MICHEL. Mr. Speaker, I object to the vote on the ground that a quorum is not present and make the point of order that a quorum is not present.

The SPEAKER pro tempore. Evidently a quorum is not present.

The Sergeant at Arms will notify absent Members.

The vote was taken by electronic device, and there were—yeas 137, nays 276, not voting 18, as follows:

[Roll No. 3]

NOT VOTING—18

AuCoin	Ford (TN)	Nelson
Bilirakis	Kolbe	Oakar
Carr	Kolter	Sikorski
Donnelly	Luken, Thomas	Vander Jagt
Flake	McDade	Vucanovich
Flippo	Murphy	Young (AK)

□ 1605

The Clerk announced the following pairs:

On this vote:

Mr. Bilirakis for, with Mr. AuCoin against.

Mr. McDade for, with Mr. Sikorski against.

Mr. HORTON and Mr. GOODLING changed their vote from "nay" to "yea."

So the motion was rejected.

The result of the vote was announced as above recorded.

A motion to reconsider was laid on the table.

The SPEAKER pro tempore (Mr. KILDEE). The unfinished business is the further consideration of the veto message of the President of the United States on the bill (H.R. 2712), to facilitate the adjustment or change of status of Chinese nationals in the United States by waiving the 2-year foreign residence requirement for "J" nonimmigrants.

The question is, Will the House, on reconsideration, pass the bill, the objections of the President to the contrary notwithstanding?

The gentleman from Texas [Mr. BROOKS] is recognized for 1 hour.

Mr. BROOKS. Mr. Speaker, I yield myself such time as I may consume.

Mr. Speaker, I rise in support of voting to override the President's veto of H.R. 2712, The Emergency Chinese Immigration Relief Act of 1989, and I am pleased to yield 30 minutes of the time to the distinguished ranking minority member of the Committee on the Judiciary, the gentleman from New York [Mr. FISH], for purposes of debate only.

Mr. Speaker, H.R. 2712 simply waives, for students from the People's Republic of China, the requirement that foreign exchange visitors must go home at least 2 years after they have completed their studies here. The House has overwhelmingly approved H.R. 2712 on three separate occasions, the last time, which was the conference report, by a recorded vote of 403 to 0. The Senate has approved the measure unanimously on three separate occasions. But the President's decision to veto the bill compels the House and Senate to vote on it once again, and that's what we'll be doing today.

We don't enjoy being at loggerheads with the administration over this bill. And this issue, really, is not whether the terms and conditions of H.R. 2712 are good or bad, because the fact is that the administration has agreed that they are good and suggests it will implement administratively all of those terms and conditions. So we are arguing about substance, we are arguing about process. And so this is our choice: Do we want a statute or, instead, an administrative decree?

Frankly, I am not convinced that the executive branch has the authority under existing statutes and regulations to provide the kind of blanket waiver called for in the bill. In any event, I submit that the rights and benefits embodied in H.R. 2712 are deserving of statutory protection. They are immigration rights, but they are also human rights, and should not be relegated to the back pages of the Code of Federal Regulations or field instructions issued by the INS.

Furthermore, in light of a particular case of which I am aware, I am not at all sure that the administration will implement in good faith its stated intentions. The son of a friend of mine in China has been admitted to a university in the United States and is supposed to reenroll there today. He has his Chinese passport and his exit visa, but has twice been denied an entrance visa by the United States State Department. When President Bush vetoed this bill, he stated that he wanted to see these exchanges continue because it is in the national interest of the United States. But in this instance, it is not China, but rather the United States Government who is prohibiting this student's departure to the United States. If our current administrative policy is that inconsistent and uncertain, I certainly do not want to rely on any future administrative action to accomplish the purposes of H.R. 2712.

There are signs that the administration's efforts to normalize relations with the People's Republic of China are having some effect. The resumption of educational and cultural contacts with China, as well as that Government's release of a number of individuals who had been detained after last year's demonstrations show that relationships are improving. I do not believe that this bill will have any damaging effect on those efforts. Rather, it will show our Nation's resolve that long-term improvements in relations between the two countries must be grounded on a mutual respect for individual rights.

Mr. Speaker, I want to thank the gentlewoman from California [Ms. PELOSI] who is the primary sponsor of H.R. 2712 for all the excellent hard work she has done and I urge my colleagues to vote once again for H.R. 2712 by voting "yes" on the question of overriding the President's veto of this important bill.

In addition, Mr. Speaker, I would like to take this opportunity to briefly discuss a matter of great constitutional significance which the President's actions on this bill have raised. The President, in his "memorandum of disapproval," stated that "the adjournment of the Congress has prevented my return of H.R. 2712 within the meaning of article I, section 7, clause 2 of the Constitution. Accordingly, my withholding of approval from the bill precludes its becoming law." The President cites the pocket veto case of 1929 in support of this proposition. Mr. Speaker, I believe that the President is wrong and he has seriously misread the Constitution. His message is an attempt to encroach upon the prerogatives of the Congress.

The Constitution is quite clear. It states that:

> Every bill which shall have passed the House of Representatives and the Senate, shall, before it become a law, be presented to the President of the United States; if he approve he shall sign it, but if not he shall return it, with his objections to that House in which it shall have originated, who shall enter the objections at large on their Journal, and proceed to reconsider it. If after such reconsideration two thirds of the House shall agree to pass the bill, it shall be sent, together with the objections, to the other House, by which it shall likewise be reconsidered, and if approved by two thirds of that House, it shall become a law. (Article I, section 7, clause 2).

A bill does not become law if the Congress, by its adjournment, prevents its return—the so-called pocket veto.

Mr. Speaker, the facts in this situation are quite clear. The President has vetoed the bill. He has done what the Constitution requires. He has returned the bill to the House with his objections. The memorandum of disapproval has been entered into the Journal. It is now the constitutional duty of the House to decide whether the bill shall become law, the objections of the President to the contrary notwithstanding.

The allegation by the President that he has pocket vetoed the bill is wrong both as a matter of fact, and improper as a matter of governmental policy. It is wrong as a matter of fact since the President returned the bill with his objections to the originating House. Prior to the recess, both Houses adopted House Concurrent Resolution 239, the adjournment resolution, which specifically authorized the Clerk of the House, and the Secretary of the Senate to receive messages from the President when their Houses were not in session for the stated purpose of preserving their "constitutional prerogative * * * to reconsider vetoed measures in light of the objections of the President." By virtue of House Concurrent Resolution 239, the Congress intentionally acted so as not to prevent the President from returning any bill to the Congress for its reconsideration. For purposes of the pocket veto clause of the Constitution, the Congress was here to receive any message the President wished to send. Accordingly, in my opinion, the bill was subjected to a normal, or return veto.

The President's attempt to invoke a pocket veto in this situation is wrong as a matter of governmental policy because it is an encroachment upon the prerogatives of the Congress to reconsider bills which have been disapproved by the President. We have a solemn duty to undertake such a reconsideration. The constitutional language which I have cited clearly contemplates that, as a check on executive authority, the Congress will have the right to reconsider bills, taking the President's objections into consideration. There is no viable governmental purpose served by this naked attempt to deprive the Congress of the opportunity for such review.

While some may argue that the length of time during which the Congress will be unable to reconsider a bill between sessions necessitates the President's taking the final action in the form of a pocket veto, I do not agree with this reasoning. Vetoed bills which are returned are subject to referral to committees and other postponements. There is never a time certainty of their consideration. There have been occasions when vetoed bills have laid over for many months before reconsideration by the House. As long as the originating House will be able to reconsider the bill at some time, the pocket veto is inappropriate. The pocket veto serves no valid purpose during a Congress.

Both President Ford and President Carter recognized this fact and agreed to use their return veto during both intrasession adjournments and intersession adjournments. They recognized that in modern times the Congress truly only prevents the return of a bill in the constitutional sense when it adjourns sine die at the end of the second session of a Congress. I believe that is the only time when the pocket veto's use is justified.

Therefore, Mr. Speaker, the matter before us, H.R. 2712 is properly here as a bill returned by the President with his disapproval. I hope that my colleagues will send a message to the President by overriding this veto both on the substance of this very important legislation, and on the serious constitutional issue of ensuring that the President respects the important responsibility of the Congress to reconsider legislation which he has disapproved.

□ 1610

Mr. Speaker, I reserve the balance of my time.

Mr. FISH. Mr. Speaker, I yield 3 minutes to the gentleman from Michigan [Mr. BROOMFIELD], the ranking member of the Committee on Foreign Affairs.

Mr. BROOMFIELD. Mr. Speaker, recent reports give a sense of urgency to the issue we are discussing here today.

Over the weekend, we learned that China has imposed new restrictions on foreign journalists.

That suggests to me that things are getting worse, not better, and that the authorities do not want the U.S. Congress and others in the world to read about future acts of repression.

We have also recently learned that more than 800 Chinese have been sent to prison for so-called counterrevolutionary crimes.

That can mean nothing more than making a disparaging remark about the Chinese Communist Party or one of its leaders.

Many face prison terms of 10 years or more.

I am sure many of my colleagues watched brave young Chinese students talk openly about the past and future of China on any number of television talk shows.

One I remember was a young graduate student at Harvard. He discussed the Chinese leadership with a lot of insight, and a lot of courage as well.

This bill will show that young student, and 40,000 others like him, that America takes its commitment to freedom of speech very seriously.

The President says these students can be protected through an executive order.

While I trust the President, and an executive order may be enough to do the job, I know that these 40,000 students would feel a lot more confident if their safety were guaranteed by law. So would I.

That is why I am going to vote to override the veto.

Yes, the United States has an agreement with China that obliges us to make sure their students return.

But in this case, America has a higher obligation. America also has laws and traditions which guarantee asylum to anyone with a well-founded fear of persecution.

Hundreds of Chinese students died in Tiananmen Square and hundreds of others are now in prison.

Thousands of students have been forced to sign confessions that can later be used against them.

I cannot believe we would ever deny asylum to people under such circumstances.

If we do not provide full legal protection to these students, we will be sending the wrong message to tyrants around the world.

There are surely men in the Kremlin and elsewhere who are drawing their own lessons from the events in Tiananmen Square.

If the Chinese leaders pay no price, either at home or abroad, others might find it a whole lot easier to succumb to the Tiananmen temptation.

Political leaders everywhere must know that the world community will not stand idly by while tyrants commit grave crimes against those they are supposed to serve and protect.

Make no mistake about it: this vote is a referendum on human rights that will be heard around the world. To tyrants, it will send a message that Americans will not countenance butchery.

To those who seek freedom, it will send a message that America will not abandon its principles.

Some may argue that not every culture subscribes to what they call Western concepts of freedom.

That may have been true in the past, but the sight of Miss Liberty being carried aloft by demonstrators in Beijing convinced me that these so-called Western concepts appeal to people all over the world.

The desire to be treated with kindness and dignity is a longing common to all men and women, both East and West.

I appreciate the difficult position President Bush finds himself in. America cannot always choose the heads of state it wishes to deal with.

It would be nice if the world's governments were led by Woodrow Wilsons and Dag Hammarskjolds, but that is not likely to happen anytime soon.

Yes, we should deal with the Chinese Government. However, let us do it not on their terms but on terms that accord with accepted norms of decent behavior.

China's old and tyrannical leadership is crumbling. A new generation is poised to rebuild China on a foundation of greater political and economic freedom.

One day I hope these 40,000 students will feel it is safe enough to return home to help rebuild their country.

Until that happens, the United States should do everything it can to protect them.

America should be remembered for providing a launching pad for China's leadership of the future—not for providing crutches for its tyrants of the past.

Mr. BROOKS. Mr. Speaker, I yield 3 minutes to the gentleman from Connecticut [Mr. MORRISON], chairman of the subcommittee which brought this legislation out.

Mr. MORRISON of Connecticut. Mr. Speaker, I thank the chairman of our Committee on the Judiciary for yielding me this time. I appreciate the opportunity to briefly urge my colleagues to vote in support of the motion in support of overriding the President's veto.

The President has made an unfortunate mistake, but we can correct it here on the floor of the House, and we can urge forward our Senate colleagues to do the same tomorrow.

This is a clear choice. Where do the people of America stand? We speak on their behalf when we say we stand on the side of democracy and freedom, the aspirations of the Chinese people as represented in their best and brightest who have come here to the United States to study. It is our duty to protect them from the harassment that they are receiving from the Chinese officials here in the United States, to protect them from the harassment that their families receive at home, to tell them clearly that, yes, the United States stands by their side, on their side, in support of their hope for the future of China. We will hear it said by some in this debate that this override has no practical significance. It certainly has a great symbolic significance. It tells us where America stands. It tells the Chinese where America stands. But it also tells the immigration authorities who makes the law with respect to immigration. The fact is that the President's administrative order does not comply with the existing statute, is outside of his legal authority.

It is the fact that he could withdraw the very benefits that he has given, and a court could order him to do so because they are outside of the statutory framework. Only through a statutory enactment can we guarantee that the intent of this Congress will be enforced. That is why this override not only sends a message to China, not only sends a message to the students,

but sends a message up Pennsylvania Avenue to the President that lawmaking requires that the constitutional process be obeyed. This veto and administrative action does not do that. The vote to override will do so. The law will be clear. It will be permanent. It will be protection, the very thing we want to give.

□ 1420

Mr. Speaker, I would like to address a question to the chairman of the Committee on the Judiciary regarding the intent of this legislation.

Mr. Speaker, it has come to my attention that several American universities maintain research facilities outside of the United States. Is it the understanding of the chairman that those students who have been involved in academic activities outside the United States and who as a result were out of the United States for purposes of pursuing their degrees on January 5, 1989, would be considered as having maintained their lawful status under the "brief, casual, and innocent departure provision" of H.R. 2712?

Mr. BROOKS. Mr. Speaker, will the gentleman yield?

Mr. MORRISON of Connecticut. I yield to the gentleman from Texas.

Mr. BROOKS. Mr. Speaker, that is my understanding of the meaning of that legislation.

Mr. MORRISON of Connecticut. I thank the gentleman. I urge my colleagues to vote for the override.

Mr. FISH. Mr. Speaker, I yield 2 minutes to the gentleman from Illinois [Mr. HYDE], the senior member of the Committee on the Judiciary.

Mr. HYDE. Mr. Speaker, it is very difficult to vote against this motion to override. There are so many symbolic statements that it makes that I am about convinced that I should vote to override. But I think in all fairness, the case has not been as adequately made as might have been made for the position of the President, and I wish that the motion of the gentleman from Illinois [Mr. MICHEL] had been granted so that Members could have heard a fuller explication of the position of the President.

I think it is important to understand the geostrategic significance of China. It is important that we maintain diplomatic leverage with that important member of the Security Council.

What about Hong Kong? At the end of this decade Hong Kong will revert to the People's Republic of China. Under what terms? Under what conditions? How free or unfree will those people be?

Would not some leverage by the United States be helpful for the cause of freedom which we are all dedicated to?

What about Pol Pot? What about Cambodia? The Chinese have supported the greatest butcher in recorded history, Pol Pot. Can we not have some influence to wean them away from supporting the Khmer Rouge in a post-North Vietnamese Cambodia? Is that not important? Are human lives not at stake? Do we lose leverage by doing this gratuitous, albeit important, symbolic gesture?

What about North Korea, which is developing a nuclear facility? What about the Chinese influence on North Korea? What about our influence over China vis-a-vis North Korea? Is that important? Do we throw that out the window for a symbolic statement that makes us feel good? We will feel good, but we will not protect a single student, because they are already protected by the administration. These things are important.

Now, if we are sensitive to human rights offenses, how can you feel comfortable about the Middle East? But not a word will be said about that. This is an easy vote.

Mr. BROOKS. Mr. Speaker, I yield 1 minute to the gentleman from New York [Mr. SOLARZ], a distinguished member of the Committee on Foreign Affairs.

Mr. SOLARZ. Mr. Speaker, in a way, this debate is both unfortunate and unnecessary. If the President, from the moment the bullets first began to fly in Tiananmen Square, had effectively expressed the outrage of the American people, if he had imposed sanctions at the outset rather than being forced to do so by the Congress, if he had not sent General Scowcroft and Mr. Eagleburger to Beijing at the very same time he was telling the American people we had suspended all high-level contacts with China, there would probably not have been any need for this legislation.

But the fact is that the President has consistently demonstrated that he is more sensitive to the concerns of the Chinese leadership than to the hopes and fears of the Chinese people.

So we need this legislation. We have to override the President's veto because on the Chinese issue, he simply no longer has the kind of credibility which would command confidence in his assurance that his directive on Chinese students would remain valid for the indefinite future.

Mr. FISH. Mr. Speaker, I yield 2 minutes to the gentleman from California [Mr. HUNTER].

Mr. HUNTER. Mr. Speaker, I thank the gentleman for yielding. I want to say that I am going to support the motion to override the President. I think that we have here a situation in which the President has had his heart in the right place. He has issued directives that have effectively to this point kept any Chinese students from being forcibly repatriated, if you will, to Communist China. In fact, H.R. 2712 is effectively a codification of the President's directives. They are very much the same. That is a fact, and I think we must concede that the President has attempted to do through administrative directive what Members are doing statutorily.

Nonetheless, I think it is important that we do this statutorily. I think there could be a challenge in the courts against the President's directives. I think there is a good argument to the effect that they are taken in violation of statute or that they go against statute and could be challenged successfully in court.

Second, I think it is very important that we send this message. This is an important time of message sending to the Communist Chinese. I welcome them aboard and I think we as conservatives should welcome aboard our liberal friends who have found this new anticommunism in their vocabulary. I almost heard a few Members from the other side of the aisle speak of the evil empire.

This is an evil empire. It is the empire that killed 40 million people, executed 40 million people in China since 1950 by British estimate without a whimper from America's liberals.

Ten minutes on television in Tiananmen Square did for the conservative cause against communism what 20 to 30 years of op-ed pieces did not do.

Let us make sure our message is consistent. We are helping the President by codifying his directives. I would urge my fellow conservatives to vote to override the veto.

Mr. BROOKS. Mr. Speaker, I yield 2 minutes to the gentleman from Ohio [Mr. FEIGHAN].

Mr. FEIGHAN. Mr. Speaker, last June the world witnessed an event that came to symbolize the struggle of people everywhere who stand up against injustice. That image was captured in the picture of a single Chinese protester, standing unarmed, bringing a column of Red army tanks to a halt. More than any other, that picture remains a symbol for a movement for democracy that stretched far beyond the confines of Tiananmen Square.

In June, President Bush referred to the lone student and said, "All I can say to him, wherever he might be, or to the people around the world is we must stand with him. And that's the way it is. And that the way it's going to be."

That is what makes his decision to veto this bill so perplexing. H.R. 2712 passed the House 403 to 0. The bill would offer protection to those Chinese students who otherwise would have to return to China once their visa expires. While the President argues that the situation can be handled through administrative directives, there is no law authorizing these directives and they can be easily re-

pealed or modified by the administration.

The students deserve more of an assurance. They deserve the guarantee of U.S. law that was passed unanimously by this House. And frankly, they deserve an explanation for the President's secret policy toward China.

Just a few weeks after the events in Tiananmen Square, the President sent two top aides to China in apparent contravention of his own announced ban on high-level exchanges. I am sure that the distinction between "contacts" or "exchanges" was lost on most of these students.

The secret mission did more to cloud what should be a strong, consistent, and clear policy of telling the leadership in Beijing that there is a price to pay for the brutality of the Tiananmen Square massacre. We should be delivering that message in public and in private, in Washington, and in Beijing.

Today, we can amplify that message and at the same time offer support and safety to those Chinese students in this country who need to know that we stand with them in their fight for democracy and human rights in China.

□ 1630

Mr. FISH. Mr. Speaker, I yield 1 minute to the gentleman from California [Mr. LEWIS].

Mr. LEWIS of California. Mr. Speaker and my colleagues, June 4 has come and gone, and Tiananmen Square will not be forgotten. The Chinese people have gone through an incredible cultural revolution in recent decades.

The fundamental family in China has changed. Today that family involves one husband and one wife and one child in virtually every circumstance. At Tiananmen Square the leaders of the Chinese Government had several choices: They could have separated those young people, forced them out of the square, they could have killed a lot of people, they could have done many things. They chose to kill a lot of people, and they were killing the single child of endless numbers of Chinese families, families that had given their all to give the best opportunity for their children. Those children were killed by autocratic action. Tiananmen Square will not be forgotten, and today I am voting to override the President's veto so that those families will understand that the people's house in this Government will remember as well.

Mr. BROOKS. Mr. Speaker, I yield 1 minute to the distinguished gentleman from Ohio, [Mr. APPLEGATE].

Mr. APPLEGATE. Mr. Speaker, the action that we take here today is not just to protect Chinese students from prosecution or persecution but, in the large picture, the Bush veto must be overridden by Congress to show the rest of the world that this administration will not continue to cater to the Chinese butchers, nor sit still and watch the oppressive Chinese Government of China murder thousands of freedom-seeking Chinese and do nothing about it.

We may not change the Chinese Government, and it is not our right to do so, but we sure as hell can let them know by this action and subsequent actions that we will not sell out democracy nor its democratic principles.

Americans have fought too long, too many Americans have died over 200 years protecting these democratic principles.

Mr. Speaker, this should be a unanimous vote.

Mr. FISH. Mr. Speaker, I yield 1½ minutes to the gentleman from Massachusetts [Mr. CONTE].

Mr. CONTE. Mr. Speaker, I rise to ask the House' support in overriding the President's pocket veto of H.R. 2712.

The President chose to veto the bill last November and, instead, used an executive order to give Chinese students here the same protection it would have offered. His motivation was good; he wants to protect the students and at the same time try to persuade the Chinese Government to continue our existing exchange program.

But changing the regulations is not enough. As Congresswoman PELOSI said yesterday, the executive order contains a conflict with our existing immigration law, and a court challenge could overturn it. That in itself is enough to justify the override.

But beyond that, I don't think it's enough to say that passing the bill might make the Chinese Government angry. We can't base our policies on what the Chinese Government thinks of them. Our relations with that government are not what they were before Tiananmen Square. They neither can nor should be.

There is no hope for political reform under Deng Xiaoping and Li Peng, and we should not fool ourselves by saying that deferring to their wishes will bring that reform. Chinese citizens who peacefully asked for democratic change are now jailed, exiled, or dead. Economic reforms stopped with the crushing of the student movement, and hard-liners recalled to government since then are reversing those that remain.

If we believe we can stop that trend, we are wrong. Our friendly gestures will not be met with internal change. We will fail and we will lose the high standing we now enjoy with the democratic leaders who will lead China in the future.

I listened to interviews with some of the student demonstrators during the democracy protests on Tiananmen Square. They shared our deepest convictions. They were readers of Jefferson and Madison. They are China's future; the old Marxist-Leninists in the Politburo are China's past. If we stand with the students now, we will benefit from it in the future. For that reason alone, I ask the House to override this veto.

Mr. BROOKS. Mr. Speaker, I yield 1 minute to the gentleman from California [Mr. LANTOS].

Mr. LANTOS. I thank the chairman.

Mr. Speaker, some say there is a symbolic vote here, in a belittling way. Men and women have died for symbols through the ages.

It is a symbolic vote. It sends the symbol of freedom and dignity and human rights to people in Prague and Budapest and Warsaw and Bucharest and East Berlin, and it sends the symbol of freedom throughout China so that the Congress of the United States will be seen to be committed to this fundamental American value.

But we now need a second symbol, Mr. Speaker. The recipient of the Nobel Peace Prize, his Holiness the Dalai Lama, is not being received by the White House. If the White House wants to send a symbol of commitment to peace and dignity and reconciliation and human rights, it should now, in the wake of this vote, extend an invitation to the Dalai Lama, the recipient of the Nobel Peace Prize, so that he can talk to our President.

Mr. FISH. Mr. Speaker, I yield 2 minutes to the gentleman from New York [Mr. GILMAN].

Mr. GILMAN. Mr. Speaker, I rise in support of the override of the President's veto and I commend the gentlewoman from California Ms. PELOSI for her outstanding efforts with regard to this issue. Many of us question the administration's policy toward China.

While I am reluctant to oppose our President, the human rights abuses in the People's Republic of China and in Tibet are so severe as to warrant critical, decisive action. Dissident students cannot be protected by executive order. They must have the guarantee that only a statute can provide.

On October 5, 1989, Chinese student leaders held a conference here in Washington at the invitation of the Congressional Human Rights Foundation. That same day the Nobel Prize committee announced that his Holiness the Dalai Lama was chosen to receive the Nobel Peace Prize. Accordingly, every Member of Congress who addressed the students here that day chose to begin their remarks by congratulating the Dalai Lama and expressing the hope that the demonstrations by the students and the Tibetans will continue to be nonviolent.

Ironically, it will stand as a subtle twist of history that 2 months later, on the same day when the Dalai Lama was awarded the Nobel Prize in Oslo, a high level U.S. delegation in Beijing

toasted the leaders who ordered the slaughter of innocent students in Tiananmen Square, and the monks and nuns in Tibet.

Mr. Speaker, the Congress and the executive branch must stop sending mixed signals. At a time when Communist dictatorships are disintegrating worldwide, now is not the time for our Government to prop-up the most tyrannical of them all.

Democracy and our national security interests won't somehow magically follow economic reforms. And economic investments by Western private sector interests will never truly flourish in an atmosphere of oppression. If we so badly want the market that China represents, if we want China to be a positive force in the global community, if we think we have reason to depend on her in military terms and geopolitical strategies, then we must support the students and monks and nuns who are attempting, through nonviolent means, to bring democracy to the PRC and to Tibet.

China is at ground zero. Some of her best and brightest have been killed, arrested, or are in hiding. Her future hope depends on the education that we and other Western nations give to the thousands of students that are being harbored in the West. That education will be tested in the manner in which our democracy, their temporary home, responds to the crisis in their country.

Our veto override will serve as a good first lesson.

Mr. BROOKS. Mr. Speaker, I yield such time as he may consume to the distinguished gentleman from California [Mr. MILLER].

Mr. MILLER of California. Mr. Speaker, I rise to support the override of President Bush's unfortunate veto of legislation to protect Chinese students from being involuntarily returned to China, where they may face brutal and unjustified punishment.

At a time when the celebration of democratic reform is sweeping the planet, the President counsels us to overlook the gross and repeated violation of basic human rights by the Chinese Government.

The President argues also that congressional action is not needed because he has taken comparable action administratively. How can the President argue that congressional action will insult and anger the Chinese Government, and then take supposedly similar action on his own?

No government has the right to slaughter unarmed and defenseless people who are demonstrating for the right to participate in the political process. No government has the right to treat those who demand liberty as enemies of the State, to destroy careers and families, to menace a generation of students, or to raise terror to the level of officially sanctioned State policy.

That is tyranny. This Nation, which arose in rebellion against tyranny, has historically given shelter to those who sought refuge against such brutality and oppression.

The policies of the Chinese Government did not end with the slaughter in Tiananmen Square. Since June 4, in actions reminiscent of the "Let 1,000 Flowers Bloom" campaign, the Cultural Revolution and the Democracy Wall protests, the Beijing government has unleashed a virtual reign of terror on its own citizens, and especially on student protestors.

At least 40 leaders of the pro-democracy movement have been executed, and arrests run into the tens of thousands. From personal accounts of past repressions, we know what terrible fates await many of those consigned to prisons and reeducation camps. In addition, the Government has taken brutal action against free thought, closing hunderds of publishing houses, newspapers, and journals.

Over 30,000 Chinese students currently in the United States are holders of J-visas, which require the holder to return to China for 2 years prior to seeking a change in their immigration status. In general, this restriction makes good sense, because we do not want to allow every foreign student who benefits from a U.S. education to qualify immediately for residency. That would frustrate our own immigration policies, and discourage many nations from sending their best students to study here in the United States.

But this is not a general situation. By overwhelming, bipartisan votes, the House and Senate agree that many of the Chinese students who hold J-visas may well face repression, imprisonment, reeducation, and other unwarranted forms of brutal treatment if they are compelled to return to China at this time.

H.R 2712 provides flexibility to those Chinese students who might otherwise face repression if they are forced to return home at this time. Hopefully, conditions will change in China to permit their return when the grace period has ended.

But it is clear that little has changed since the Tiananmen massacre. Within the past 2 weeks, the Chinese Government, in lifting martial law in Beijing, hailed the crushing of the students on June 4 as a great event. That does not sound repentant to me; that does not suggest that the Chinese leadership even understands why the world was horrified by its actions.

Perhaps our own President does not understand fully either. I am aware that the President feels strongly that this bill should not become law. The administration argues that passage of this law will anger the Chinese Government and damage our relations.

Mr. President, with all due respect, the slaughter of innocent students, the continuing executions, the massive imprisonments, and the assault against civil liberties and freedom of expression—these actions by the Chinese Government are what has damaged relations between our Governments. Our sympathies and friendships with the Chinese people are unmarred—and are, in fact, strengthened by their current struggle.

The entire Congress owes a debt of gratitude to our colleague, Congresswoman NANCY PELOSI of San Francisco, who has played such a critical role in raising this issue and securing passage of this legislation. When it becomes law over the President's objections, credit will most appropriately belong to this tenacious and effective Member of the House, and I want to salute her prematurely for her outstanding leadership.

Mr. BROOKS. Mr. Speaker, I yield such time as he may consume to the gentleman from Hawaii [Mr. AKAKA].

Mr. AKAKA. Mr. Speaker, I rise in support of the override of the President's veto, as an original cosponsor of H.R. 2712.

Mr. Speaker, as an original cosponsor of H.R. 2712, the Emergency Chinese Immigration Relief Act of 1989, I urge my colleagues to support the override of the President's veto and ask unanimous consent to revise and extend my remarks.

The administration's rush to accommodate the perpetrators of the Tiananmen Square massacre, its reliance upon covert diplomatic maneuvers, and its desire for business as usual with the Chinese Government offers little security to the brave Chinese students who have no choice but to seek refuge in our country. Only the statutory protection afforded by H.R. 2712 adequately safeguards Chinese students from the real possibility of persecution if they are forced to return to China.

Override of this veto also sends a strong message to the aging Communist autocrats in Beijing. The United States Congress and the American people support the nonviolent movement for reform and democracy in China and have not forgotten the bloody crackdown last June and the ongoing repression of dissidents. We refuse to participate in a conspiracy of denial and revision of history.

The choices before the Chinese Government are clear: Follow the evolutionary course charted by Poland, Hungary, and Czechoslovakia, or suffer the same fate as the Ceausescu regime in Romania. We all hope that China will follow the nonviolent path toward democratization, but until we see meaningful progress in that direction, Chinese nationals in our country deserve our protection.

Our choice today is just as simple: Do we stand with the Chinese students in support of human rights, nonviolent change, and democracy? Or do we join the Chinese Government in silencing the voices calling for peaceful reforms? A vote to override reaffirms our commitment to freedom and democracy.

I urge my colleagues to stand with the Chinese students in the United States, and all the brave Chinese people persecuted because of their opposition to tyranny, and to support the override of the President's veto.

□ 1440

Mr. BROOKS. Mr. Speaker, I yield 1 minute to the gentleman from Kansas [Mr. SLATTERY].

Mr. SLATTERY. Mr. Speaker, as an original cosponsor of the Emergency Chinese Immigration Act, I strongly opposed President Bush's veto of this important human rights legislation.

The President's action sends a chilling message to the brave students and citizens of China who risked their lives during prodemocracy demonstrations in Tiananmen Square last June.

Congress should overwhelmingly override the President's veto and grant

a 4-year home-country waiver for students with J-visas, and adjust the immigration status of any Chinese student whose current visa has lapsed and who faces persecution in China.

Under the President's approach these human rights protections may not be extended to nearly 600 Chinese students attending college in Kansas, or to the nearly 40,000 Chinese students, currently in the United States, who have courageously supported the prodemocracy movement in China.

Many people living under oppressive governments have long looked to the United States as a symbol of democracy, freedom, and opportunity.

Today we have an opportunity to send a message to the world that America is committed to advancing human rights for all people.

We should override the President's veto.

Mr. FISH. Mr. Speaker, I yield 1 minute to the gentleman from California [Mr. LAGOMARSINO].

Mr. LAGOMARSINO. Mr. Speaker, while it gives me no pleasure, I rise in support of overriding the President's veto of H.R. 2712, the Emergency Chinese Adjustment of Status Facilitation Act. Having cosponsored this legislation, presented testimony in its favor before the Judiciary Committee, spoken out for it twice here on the floor, and, of course, voted for it twice, and signed a Dear Colleague on behalf of overriding, I believe this special measure is necessary and urge my colleagues to join me in voting to override the veto and make H.R. 2712 law.

We are all very aware of the tragic events that occurred in the People's Republic of China in 1989. Unlike the incredible changes that have happened in Eastern Europe, the peaceful Chinese movement for greater economic and political reform was brutally and violently crushed by the Communist authorities with tanks, bullets, and blood. Just 2 weeks ago I was in Czechoslovakia and witnessed the dramatic events unfolding there first hand. I met with President Havel—who just weeks prior had been a political prisoner. In contrast to Beijing, in Prague, students, their parents and grandparents used their people power to end the Communist monopoly and renew hope for a brighter, democratic future. Like the East Germans, Poles, Hungarians, Romanians, Bulgarians, and Yugoslavs, the Czechoslovakians are taking—to use a Chinese slogan—"The Great Leap Forward."

Sadly, China continues to fight the tide and look backwards. Instead of positive reforms and liberalization, repression and abuse continue. The human rights conditions in China have not improved and the Chinese Government has made no real effort toward making any improvements. Since the June 4 crackdown, there have been numerous reports of arbitrary arrests, executions, and continued repression. Among the many examples of human rights abuses, Asia Watch reports that at least 40 prodemocracy supporters have been executed and within the last 6 months, at least 800 students have been arrested. Clearly, the terror in China continues unrestrained.

The protections provided for by H.R. 2712 are desperately needed by the Chinese students still in the United States. Like their counterparts at home, many of them rallied for democracy and spoke out against the Communist Beijing government. Their actions certainly did not go unnoticed—especially by the Communists in China. If forced to return to China, these students would be marked and subject to arrest, torture, and even execution because they spoke their minds, expressed their true hopes for the future, and took advantage of President Bush's visa extension for their own safety. The freedoms of speech, assembly, and press that we take for granted here in the United States are viewed as crimes by the Communist Chinese and would be used against these students upon their return to China in its current political environment.

While President Bush has already provided most of the needed protections through Executive order, and I applaud him for doing so, H.R. 2712 would provide greater security by establishing these protections through law. For example, some of these protections would necessitate the changing of current statutes. An Executive order cannot do that. A new law, like H.R. 2712, can. In addition, I am concerned that the temporary safety provided for by the Executive order will not be enough as the Communist government continues its repressive policy with no signs of change. I also believe that enactment of this legislation will signal to the Chinese Government that the United States will continue to stand up for human rights, liberty, and freedom.

While I am concerned about setting a precedent by this legislation affecting our immigration laws, I believe the nature of events in China and the fact that J-1 visas are exclusive to Chinese students makes this a special, separate situation, unlike others.

I am standing by the pledge I made to Chinese and American students at the University of California-Santa Barbara, located in the heart of my district, to support H.R. 2712 and override the President's veto. I urge my colleagues to join me.

Mr. FISH. Mr. Speaker, I yield 1 minute to the gentleman from Washington [Mr. MILLER].

Mr. MILLER of Washington. Mr. Speaker, I rise in support of the motion to override. The broader question that we face today goes beyond this motion. It is: How do we promote human rights abroad, and how do we promote human rights in particular in a Communist nation like mainland China?

For the last several years we have applied steady pressure, including clear public statements on behalf of human rights. That policy has been effective in Eastern Europe and other places. Now, the issue is in the case of China, should we change that policy? Should we send a muffled message rather than a loud and clear message? That is what this is about, because both the President and the Congress agree that we should not send the students back to face a possibility of persecution, arrest, and possible execution.

For that reason, I just say let Members continue the congressional and American tradition of loud and clear support for human rights. Let Members override the veto.

Mr. FISH. Mr. Speaker, I yield 2 minutes to the gentleman from Iowa [Mr. LEACH].

Mr. LEACH of Iowa. Mr. Speaker, no political party, no philosophical grouping, has a monopoly on indignation. The conservative wing of the Republicans, the liberal wing of the Democrats, the moderate center, all respectively are appalled at the indefensible oppression of democratic dissent by the current government in Beijing.

What is at issue today, however, is not a question of indignation but of judgment—how America can play a constructive role in moderating Chinese institutions and liberalizing Chinese policies. If the history of the past decade is a guide, almost every effort by the United States to isolate China has accentuated xenophobic nationalism on the mainland. On the other hand, almost every U.S. step toward constructive dialog has been met with a liberalized response.

In this context, Congress must respect the President's initiative to establish a new high-level dialog with top Chinese leaders. On the other hand, the administration and Chinese leadership must respect Congress' commitment to do everything possible to underscore and underpin support for student visitors to the United States of America. That, and that alone, is a narrow basis of this particular override consideration.

Therefore, with the deepest respect for the President, the strongest possible support for his broad initiative, I would urge that this veto be overridden. But I do so exclusively with the understanding that it is on a narrow basis, and that it under no circumstances, prejudices this Congress toward a view on sanctions or toward any other policy of a strategic dimen-

sion with regard to the People's Republic of China.

Mr. FISH. Mr. Speaker, I yield 2 minutes to the gentleman from Texas [Mr. BARTON].

Mr. BARTON of Texas. Mr. Speaker, imagine that today is not January 24, 1990, but instead January 24, 1785, and that we are not Members of the United States Congress but instead Members of the Continental Congress. Imagine further that an emissary of the French king has given Members the choice of support of the French Government by law or the support of the French Government by giving the support of one of his subcabinet ministries by directive. Which would you prefer? A French law, of course.

That is the issue today: What is best for the Chinese students in our country, a law of the land or a directive of the commissioner of immigration? A law, of course, is best.

Do not confuse procedure and process for policy. The best policy is for the United States of America to protect by law the Chinese students today in our country. The students could someday, possibly, be Jeffersons, Madisons, Monroes, and Washingtons, of their country.

Today, the House of Representatives cannot allow the Chinese people's struggle for democracy to go unnoticed. Silence in the face of government violence against the Chinese people is intolerable.

I represent Texas A&M University in College Station, TX. Texas A&M has over 300 Chinese students. These students prefer the choice on whether to stay in this country to be a legislative protective choice, not a directive by the Commission on Immigration. Reports surface every day concerning Chinese students in the United States being harassed and intimidated by Chinese Embassy officials. In some cases, the students have been warned to be aware of what they say and do or their future will be jeopardized. It is for this reason we must do all we can to protect the Chinese students. Chinese students are not victims of political oppression, they are the target of it.

The directive issued by the President is a positive document. Simply put, it is not, in my opinion, the best way to protect, or the strongest way to protect the support of the Chinese students. We must override the veto.

Mr. FISH. Mr. Speaker, I yield 1 minute to the gentleman from New Jersey [Mr. SMITH].

Mr. SMITH of New Jersey. Mr. Speaker, I plan to vote "yes" on the override today. However, I believe it would be most unfortunate and most unfair to characterize the President's veto as one of opposition to the interests of the Chinese students or as opposition to those Chinese escaping Beijing's one-child-per-couple policy, with the heavy reliance on coercion and forced abortion.

The President has, after all, put the essential provisions of H.R. 2712 into effect by Executive order, and as a matter of fact, his language on coercion in population control programs exceeds that of H.R. 2712.

It seems to me the not so subtle issue before us today is one of turf, of Presidential prerogatives in the formulation of foreign policy, and it is also one of the geopolitical importance of the PRC. Such concerns, in my view, carry some weight but pale in light of the oppression being visited upon the people of China by its leaders. It is right and proper that H.R. 2712 become law. Prudence dictates that we codify the President's Executive order.

Therefore, I urge my colleagues to vote "yes" on the override.

Mr. KILDEE. The gentleman from New York [Mr. FISH] has 12 minutes remaining and the gentleman from Texas [Mr. BROOKS] has 15 minutes remaining.

Mr. FISH. Mr. Speaker, I yield myself 1 minute.

□ 1650

Mr. FISH. Mr. Speaker, the issue before this body today is not whether to provide protection for Chinese students but rather how best to accomplish this objective. Both the Congress and the President are committed to extending safeguards to those Chinese nationals who may face danger on return to China.

The President's veto of H.R. 2712, the Emergency Chinese Immigration Relief Act, is an expression of his belief that the safeguards Congress favors can be implemented by administrative action. The legality and ultimate effectiveness of such administrative directives, however, remain in doubt. The certainty of statutory remedies, in my view, is preferable to administrative relief clouded by possible legal challenges.

The effort to accomplish the objectives of H.R. 2712 by administrative action is problematic—as a brief analysis of two of the bill's provisions confirm.

Firstly, the bill waives—for thousands of Chinese nationals—the requirement of current law that exchange visitors (the J nonimmigrant category) return to their home country for 2 years. Although current law includes a waiver mechanism, a decision to grant waivers to large numbers of people—rather than on a case-by-case basis—may exceed the statutory authority.

Secondly, H.R. 2712 provides that Chinese nationals shall be considered—for purposes of adjustment of status or change of nonimmigrant classification—to have maintained lawful status during the period of deferral of their enforced departure from the United States. The provision effectively supercedes requirements of current law relating to maintaining continuous lawful status as a prerequisite to eligibility for adjustment to permanent resident status or change from one nonimmigrant classification to another nonimmigrant classification. An administrative directive that seeks to accomplish the same objective by making a statutory requirement inapplicable to a class of Chinese nationals arguably is invalid.

An override of the veto is advantageous, in my view, for other substantial reasons. The potential for revocation of administrative directives creates uncertainty about the continued availability of relief—causing needless anxiety for many Chinese nationals. Congressional support for the veto, in addition, can be misconstrued or issued by opponents of democracy abroad, who may argue—however erroneously—that Congress is abandoning its support for the Chinese students.

Mr. Speaker, I share the President's desire to maintain student exchange programs with China. My hope is that China will recognize that these programs remain mutually beneficial.

I urge my colleagues to support the veto override.

Mr. Speaker, I have one remaining speaker who will wrap up the presentation of the minority, and, therefore, I yield such time as he may consume to the gentleman from Texas [Mr. SMITH], the ranking minority member of the subcommittee.

Mr. SMITH of Texas. Mr. Speaker, this is a situation where most of my colleagues from both sides of the aisle are on one side of the issue—the other side—and I would have to say that no doubt most efforts to sustain a Presidential veto are uphill, if not outright vertical. Still, even if the President does not have the votes, he does have the better argument.

In fact, the President's administrative directive is broader and better than the bill in question. It is broader because it applies not just to Chinese students but to all Chinese nationals who are in this country and who fear persecution at home.

It is better because it will not result in the termination of cultural exchange programs which have been instrumental in the prodemocracy movement in China.

I would say to my friends on both sides of the aisle that it is easy to get caught up in a current of emotionalism that seems to swirl around this issue. It is not a question of whether Chinese students are protected. The President has already done that. The question is how, and the President's administrative directive is both better and broader. I urge my colleagues to sustain the President's veto.

Mr. Speaker, I urge my colleagues to join me in support of the President by voting against the override of his pocket veto of H.R. 2712, the Chinese Student Facilitation of Status Act of 1989.

The President's administrative directive provides broader protection than H.R. 2712 provides.

I, too, believe that those Chinese students here in the United States who face persecution at home must be protected by the United States until it is safe for them to return.

I demonstrated my beliefs by voting for H.R. 2712 in the previous session of Congress.

I was also a conferee for H.R. 2712 and assisted in working out the differences between the conferees so that H.R. 2712 could move forward to the President.

It is also because of my sincere desire to assist and protect the Chinese who live in the United States in fear of persecution that I will vote to sustain the President's veto of H.R. 2712.

Since the House vote on H.R. 2712, the administration has constructed broader protection for Chinese nationals in this country.

Not only does that protection more fully assist the Chinese, it allows the President to exercise his foreign policy authority and perhaps save now-threatened U.S.-Chinese cultural exchange programs.

The administrative directive provides broader protection in that it allows legal immigration status, employment authorization and notice of expiration of legal status to all Chinese nationals, not just students.

The directive also expands the protection given to those who fear coercive population control policies.

H.R. 2712 limits this protection only to Chinese nationals.

I want to emphasize that under no circumstances will eligible Chinese students be deported if the President's veto is sustained.

Recent efforts to override the President's veto attempt to make the case that the administrative directive provides uncertain and easily revocable relief.

This is a smoke screen for those who simply want to punish the President for his position on foreign policy with China.

Opponents to the President's administrative directive are trying to create an illusion that the directive is somehow ineffective, uncertain, and short-lived.

The facts do not support the illusion.

First, opponents to the administration claim that the President's administrative directive "conflicts with existing law."

This simply is not so.

At the President's direction, the Attorney General has exercised his authority to grant certain waivers under the immigration laws.

The Department of Justice and the Immigration and Naturalization Service have determined that the President has the authority to establish this directive and that it is in accordance with current immigration laws.

Second, those promoting the override vote claim that the President's administrative directive is "subject to court challenge."

The directive is not subject to a successful court challenge since there is no injured party.

The Chinese students suffer no injury since they will get the same relief, regardless of whether it is granted through H.R. 2712 or the directive.

Precedent is clear that no one in this case would have standing to challenge a loss of immigration relief.

The third argument is that the directive "can be withdrawn anytime at discretion of the President."

The administration has stated that the administrative relief is "irrevocable."

Relief will not be prematurely withdrawn from the Chinese students.

Precedent supports this position—all prior administrative grants of extended voluntary departure have always continued for at least the initial time period prescribed by the administration.

The administrative directive is no more susceptible to revocation than legislation, which can be repealed at any time.

Since the President's administrative directive provides even broader protection than H.R. 2712, I can interpret the opposition to the veto in only one way: H.R. 2712 is being used to criticize the President's policy toward China.

This discussion of change in our immigration policy has developed into a vehicle to "bash Bush."

The Chinese students remain protected under the President's June 6 protection; waiting another few months so as to allow the administrative directive to work would not affect the protection already promised and given to the Chinese students.

If we want to discuss our differences in the matter of United States foreign policy with China, let us do so in an appropriate manner.

Using unnecessary immigration legislation as a tool to express discontent or disagreement in foreign policy affairs is inappropriate.

We, as Members of Congress, must not use this issue to promote our own foreign policy objectives.

By so doing, we needlessly gamble with the future of the Chinese students.

If we enact H.R. 2712, we will jeopardize the opportunities of future Chinese students.

The Chinese Government has informed our Ambassador to China that, if H.R. 2712 is enacted, the cultural exchange programs between the United States and China will be terminated.

Over 7,000 Chinese students have received visas to study in our country since the violence in Tiananmen Square last June.

I believe that it is because of these important cultural exchange programs that the prodemocracy movement was and is possible.

Chinese students who have studied in the United States, learned the value of democracy, and carried it back across the waters to China are the future of China.

Without the precious opportunities to exchange the ideas and principles of democracy, the pro-democracy movement may not survive.

In our efforts to be supportive of the Chinese people, it is easy to be carried along by the emotionalism of events of Tiananmen Square.

But we must put our emotions aside and look carefully at the facts of the situation.

I know that Members of this body want to send a message to Beijing that the American people abhor the events in Tiananmen Square. We want to vent the anger we feel toward the Chinese Government for crushing a revolution which captivated all of us and gave us hope that the billion people of China would soon enjoy the freedoms that should have been theirs at birth.

We have sent that message. I had the opportunity to speak here in the Chamber as we voted 403–0 to pass this bill last November. Could we have sent a stronger message?

Now it is time to look after the best interests of Chinese nationals both here and in China. I realize that my colleagues here in this body that represents the American people feel compelled to use their votes to speak out against the Chinese Government, but I hope that if we do, and if we do vote to override the President's veto, that our colleagues in the Senate will allow this vote to serve as the symbolic expression of America's outrage, while using their vote to protect best interests of Chinese students, and the division of powers set forth in the document that established our freedom: the Constitution of the United States.

Join me in providing the best possible protection for the Chinese students and people by supporting the President. Vote to sustain his veto of H.R. 2712.

Mr. BROOKS. Mr. Speaker, I yield 1 minute to the distinguished gentlewoman from New York [Ms. SLAUGHTER].

Ms. SLAUGHTER of New York. Mr. Speaker, today we have the opportunity to make it clear that the United States is an advocate of human rights around the world. We are considering a measure that will afford protection to many Chinese exchange students who fear retribution for prodemocracy activities should they return home once their visas expire.

H.R. 2712 will protect those students by extending their visas, but it does more than that. It sends a message to the students, to the Chinese Government, and to the world that America will not trade the lives of students for comity with the Chinese Government.

By its unanimous vote, the House sent this statement loud and clear, but the President's veto has garbled the message. Today we must take the opportunity to make certain that the world understands our Nation stands firmly for liberty and human rights.

Mr. Speaker, I urge my colleagues to join me in voting to override the President's veto of H.R. 2712.

Mr. BROOKS. Mr. Speaker, I yield 3 minutes to the distinguished gentleman from Florida [Mr. SMITH], a member of the committee.

Mr. SMITH of Florida. Mr. Speaker, I thank the gentleman for yielding this time to me.

Mr. Speaker, some of our colleagues on this side have portrayed this issue somewhat correctly. It really is a narrow policy question, but it is a broad question of the separation of powers.

The President says that he is in favor of extending this period of amnesty for the Chinese students. I believe him. However, he wants to do it in a way that Congress says is inappropriate, and I think we are right. The reason I think we are right is not because I believe we are right from the institutional sense but because, unfortunately, the President has proven that his reasoning force and his capability to adhere to what he said previously on this issue is in question, and the documentation is simple.

In addition to the amnesty period which he said he would provide, he also invoked executive sanctions against China, cutting off military, joint cooperation, stopping the sale of certain items of significant military and technological capability to the Chinese, and invoking other sanctions. This pains me. It pains me greatly to tell my collegues that the economic and military sanctions imposed on China by the Bush administration, even if they were adequate, have not been enforced.

The American people, I hope, are outraged to learn that the administration has continued to assist the Chinese Government in upgrading its military forces all during this period. They have agreed to continue the Peace Pearl Program, which is the upgrading of fighter jets, and have brought back Chinese technicians who were furloughed off back onto the job in the United States. They have continued and sent to the Chinese Government satellite tracking capability so that they can track missiles which the Chinese fire on test fires to develop the M-9 missile, which is what we asked them not to send the Saudis. That is the reason that this body must enforce its legislative capability. It is not that we do not think the President really wants to have that amnesty period.

The difference is that they are prone in the White House to saying one thing and, unfortunately, doing another. The program is important. The President has agreed that he believes in the Pelosi bill. They have passed it unanimously in the Senate by voice vote.

We all agree, and since it is our legislative prerogative to put in place items which cannot be changed except by us, not by executive action, this veto should be overridden. We should remain in control of this important policy question, and the President should understand it is for the benefit of the whole country, because ultimately, I say to the Members, the moral standards of this country are at stake. Our efficacy as a nation of democracy is at test here, and I believe we must pass this test by overriding this veto.

Mr. BROOKS. Mr. Speaker, I yield 5 minutes to the distinguished author of the bill, the gentlewoman from California [Ms. PELOSI].

Ms. PELOSI. Mr. Speaker, I thank my colleague, the gentleman from Texas [Mr. BROOKS], chairman of the committee, for yielding this time to me, and also for his leadership in helping to move this legislation forward. I also thank our colleague, the chairman of the subcommittee, for his assistance, and I thank the ranking Republican member of the Committee on the Judiciary, the gentleman from New York [Mr. FISH], for his assistance as well. I extend my appreciation to each and every one of our colleagues in the House who cosponsored this legislation and who spoke out in favor of this legislation.

I am very proud of it because it has brought so many of us together in a very bipartisan way. I think it is an appropriate way for us to begin this second session of the 101st Congress for us to rise in support of this legislation.

When I came to the House of Representatives, I was very proud to become a Member and a colleague of each and every one of you. I also thought each and every one of us was a colleague of everyone who served in this House before us, taking us all the way back to the origins of our Republic—those people, many of whom fought for our independence and helped give birth to our democracy. And in a spirit of bipartisanship that stems from our unity around the idea that we all stand for democractic principles, I wanted to add to our pictures of our Founding Fathers, George Washington on one side, and a friend of our Republic, the Marquis de Lafayette, the one man 200 years later in the square. Many of the speakers before me have referred to him, and I think so many Americans identified with him at the time, and still do.

On this painted picture, it says:

One man standing against madness kindles anew the sparks of freedom and elevates the spirit of man. How can we not stand with him?

□ 1700

Mr. Speaker, I am proud of this legislation because I believe it gives the Congress the opportunity to stand with him.

The question before the House is, "Is the veto override necessary?" I believe it is necessary for two reasons. It is necessary to give statutory legal protection to the students, and it is necessary because it is an issue of safety for the students. The situation in China makes the override necessary.

Mr. Speaker, first we saw the massacre, and then we saw the masquerade. Many of my colleagues alluded to the events that have followed the massacre in Beijing: the repression, the denial, the continued repression, the increased repression following the death of Deng Xiaoping's pal, Ceausescu, in Romania.

Now the Government of China, in addition to suppressing freedom of speech, because it became clear in June that, if someone speaks up for freedom in China, they can be killed, and many people were; now the Government in China, in opposing this override of this legislation, is trying to curb freedom of speech in the United States.

Mr. Speaker, I have no doubt that the President of the United States believes in human rights and that he does not want to send the students back, but I think the statutory legal protection is necessary because it guarantees the safety of the students. Not only that they do not have to go back, but that it guarantees that they can speak freely in the United States without any fear that their speaking out will be punished in China.

I know of a case of someone in my district who fled from China, from the Tiananmen Square massacre, had an interview with the press in the United States and is now wanted for rumor mongering in China. I ask my colleagues, "Can you imagine if everyone who had an interview with the press was wanted for rumor mongering?" In addition to that we know that the Chinese Government continues to take handwriting samples of students in universities in order to compare it to posters during the demonstration in May and June.

Mr. Speaker, I believe that we disagree with the President on the method of reaching a bright future with China, one based on economic, cultural, and political ties because the President had to do what he had to do. He believed he had to veto the bill.

However, my colleagues, Congress must do what it must do. It must send what we have all referred to today as a very clear message to the butchers of Beijing that their behavior places them outside the circle of human behavior, and, if we are to continue this relationship, and we certainly do not want to isolate China, but to continue the relationship we must insist on their respect for human rights of the people in their country.

What if we do not send that message? What is the opposite message that turning down the override, if we sustain the President's veto, what is the message that will go forth from this body to the world?

Mr. Speaker, I believe that that message is that we in the Congress of the United States cheer Lech Walesa when he comes in for his fight in Poland, take great pride in all of the democratic sweeping of Europe that is going on now, but it will say, "The people of the United States, we support lovers of freedom throughout the world, and we support and encourage

the growth of democracy in all countries of the world and throughout the world. Not so fast, China. All those who wish to speak up for democracy, please step forward. Not so fast, China."

Mr. Speaker, I urge my colleagues to join with the lone man and support the override of the President's veto.

Mr. GUNDERSON. Mr. Speaker, it is not often that I stand before this Chamber asking my colleagues to vote against the President on foreign policy issues. Nonetheless, today I have no choice but to urge Members to vote to override the President's veto of H.R. 2712, a bill to prevent the mandatory return of Chinese students to China once their J-1 visas expire.

This legislation is necessary because, without statutory protection, the fate of Chinese students is unclear. Clearly no one doubts President Bush's concern about protecting the 40,000 Chinese students currently residing in the United States. However, the reality is that the President only issued an administrative directive to the Immigration and Naturalization Service that can be withdrawn at any time. This action simply does not send a strong enough signal that the United States will not only protect the students, but will welcome those who choose to live in a country where freedom and democracy exist.

In addition, the Chinese Government must understand that if they really want these students back, they must improve the political environment—including basic human rights—in China before the students return. The Chinese authorities run the risk of losing the most brilliant young minds who are studying in the United States. We need to preserve the freedom of Chinese students to speak out on behalf of prodemocracy forces in China.

By offering a possibility that these students might become permanent residents and ultimately citizens in the United States, a clear message would be sent to Chinese authorities that unless the Government adopts meaningful reform, their students will not be returning home.

Although martial law has been lifted in Beijing, the reality is that repression continues in China. Since the June 4 massacre in Tiananmen Square, people around the world have raised their voices in support of the ideals of democracy and freedom for which the peaceful protestors died. There have been reports that more than 800 Chinese have been sentenced to prison for their involvement in the prodemocracy movement. As many of these students have received 10-year sentences for participating in "counter-revolutionary riots," the task of keeping the democracy movement alive rests on the shoulders of its supporters outside of China.

Mr. Speaker, we must provide a strong message to Chinese students in the United States that this is going to be a long-term commitment. As Americans, we cannot force Chinese students or exchange visitors to return to a country where personal liberty and safety would be endangered. Certainly, none of us are going to risk the possibilities of the consequences that could await these students if we changed our mind later on.

Mr. CONYERS. Mr. Speaker, I rise in support of the motion to override President Bush's veto of H.R. 2712, the Chinese Students Immigration Relief Act.

By any accepted measure of international human rights, the human rights abuses and antidemocratic practices by Chinese authorities are serious: at least 40 prodemocracy activists have been executed, and over 6,000 people—according to official Chinese sources—have been arrested. In the last 6 months, at least 800 students have been arrested, including many leaders of the prodemocracy demonstrations. The Chinese students currently in the United States deserve adequate protection.

Instead of condemning the continuing crackdown on the prodemocracy forces, the administration looks the other way, resisting even the most minimal attempt to impact on or denounce the abuses. The President's administrative directive does not adequately protect the students, nor does it send the necessary signal to the Chinese Government that we will not tolerate continued oppression.

This winter has brought great changes: democratic movements have triumphed in Poland, Czechoslovakia, and Hungary. The Romanian people have toppled a repressive dictatorship. How can we welcome the forces of freedom in Eastern Europe, yet turn our backs on the people struggling to bring democracy to Communist China?

We must send a clear signal to the Government in Beijing: We have not forgotten the violence in Tiananmen Square and we will continue to support the struggle for human rights and democracy in China, and around the world.

Mr. YATES. Mr. Speaker, I would be delighted if the House today rejects the President's veto of the bill to protect the Chinese students in this country. Like most Americans, I am deeply disturbed by the Bush China policy that has been revealed in recent weeks.

The picture that the whole world saw of our National Security Adviser, General Scowcroft, toasting the bloodstained Chinese leadership in Peking was an insult to the concept of international human rights, and frankly, I was ashamed. The vote today will help repair some of the damage that has been done, but I am at a loss to understand the reasoning of the Bush administration.

The Chinese leadership is old, desperate, and out of touch with its people and their aspirations. Making deals with these people makes no sense. They are a part of China's past. The Chinese students, who are studying here and in other Western countries together with their fellows in China, are China's future and we should be doing all we can to support and encourage them. The American people, in fact, understand these issues very well and that is the meaning of today's bipartisan vote. Let us hope it will help our President to understand.

Mr. PORTER. Mr. Speaker, H.R. 2712 provides essential security for Chinese students studying in the U.S. in light of the massacre in Beijing and the ongoing crackdown. Despite the President's veto, it must be enacted.

Tragically, there is still much for them to fear. Arrests, persecutions, and even executions continue. No true form of dissent is allowed, and those that spoke up in June are today punished. Listen to the words of the President of China's Supreme People's Court: "It is a mistake," he said, "to think that, because there is the law, justice can be executed without the guidance of the party's policies." Those same party policies currently guiding justice in China led to the violent June slaughter of peaceful demonstrators.

China is moving against the tide of history.

We are not just voting against the President's veto, we are also sending our message to the Chinese Government that we abhor their continued repression. I do not believe the administration has sent that message as strongly and as forcefully as it should have.

I am not in favor of cutting off all contacts with the People's Republic of China. Isolation of China is not in our interests, nor is it in the interests of the over 1 billion Chinese citizens. However, that does not mean that our hands are tied when it comes to human rights.

We constantly deal with governments which do not share all of our commitments to human rights—South Africa, El Salvador, the Soviet Union, and China are examples. Our country must stand as a beacon for repressed people everywhere. We must unequivocally state our opposition to government suppression of individual rights and fundamental freedoms whenever and wherever it occurs. China's freedom-seekers must have confidence that the United States will not put worn-out geopolitical considerations ahead of their aspirations for human rights personal dignity.

Government that abridge fundamental freedoms must face repercussions. In South Africa we imposed sanctions. In the Soviet Union we enacted Jackson-Vanik. And in El Salvador we restrict foreign assistance. Unfortunately, our response to the crackdown in Beijing has been unjustifiably mild.

The two secret Scowcroft-Eagleburger missions sent the message that our Government, at least with respect to China, was willing to look the other way. Toasting the butchers of Beijing was a slap in the face of all those who died in the streets of Beijing and all those who now must silently hope for a more democratic future.

If the Chinese Government wants substantial change in attitude on the part of Congress or the American people, I have a few suggestions: Lift martial law in Tibet; live up to the guarantees for a high degree of autonomy in Hong Kong; end arbitrary arrests; lift press restrictions; admit responsibility for the deaths this past June; and stop once-and-for-all using the cloak of "internal affairs" to avoid responsibility for blatant human rights violations.

Human rights are not internal matters. They are indivisible. The denial of fundamental freedoms and human rights anywhere is a threat to free men and women everywhere. By overriding this veto we stand solidly behind those who seek freedom in China and hopefully, if Beijing wants, the possibility for improved relations between our two countries.

Mr. MATSUI. Mr. Speaker, today, for all the world to witness, Congress will speak loudly where the President would only whisper. Today, Congress is standing up with strength and conviction to the forces committed to crushing the democratic movement in China.

Our vote to override the President's veto of the Emergency Chinese Immigration Relief Act is not a vote to protect inspired partisan legislation. It is simply common sense.

A vote to override meets the absolute minimum standards of humanity and justice. It accomplishes what is obviously scrupulous. The very least we can do is affirm by law a principle which ought to go without saying: That the United States is a haven for those who face physical abuse and political oppression in their homeland.

Sadly, our President opposed that codification and vetoed our legislation. In doing so, he has sent a signal to the world that the implications of the brutality at Tiananmen Square are limited at best. I am not implying that the President is not concerned about human rights; what I am saying is that the President's actions belie those concerns.

The President points to areas of progress which the Government of China has made since the attack in Tiananmen Square. They've accepted Peace Corps volunteers. They've accredited a Voice of America correspondent. They've reopened Fulright Exchanges. They've even lifted martial law.

I would suggest to the President and to my colleagues in Congress, however, that these are not examples of human rights advancements in China. These are insubstantial external offerings aimed at appeasing the world community which it alienated through the inhuman attack on its own people.

Can the carnage in Tiananmen Square be forgotten by an acceptance of Peace Corps volunteers? Can the more than 40 prodemocracy activists that have been executed be pitted against an accreditation of one Voice of America correspondent? Can the thousands of indiscriminate arrests be disregarded by reopening the Fulbright Exchange Program?

President Bush may be willing to accept those appeasement offering as genuine progress. I am not.

Simply put, the President has compromised the principles which he and almost all Americans hold dear in the interests of helping out an old friend, the Government of China. If this were a bill to protect Nicaraguan students against the Sandinista Government in their homeland, would we be debating a Presidential override? I doubt it.

Mr. Speaker, today we have an opportunity to repair the damage done by the President's veto, to come to the aid of the students who need our protection, and to let the Government of China be clear as to our commitment to the students who perished in Tiananmen Square in their struggle to see democracy flourish in China.

I urge my colleagues to vote to override the President's veto, and I commend my colleague from California, Ms. PELOSI, for persevering to see this important legislation through.

Mr. MINETA. Mr. Speaker, I rise in strong support of the motion to override the President's veto of H.R. 2712, the Emergency Chinese Immigration Relief Act.

It is essential that we enact this bill to give statutory protection to Chinese students in the United States. The administrative directive issued by the President simply does not give adequate protection to the Chinese students living in this country.

Mr. Speaker, the massacres and executions in Tianamen Square shocked and disgusted the world. Today, 7 months later, the violent oppression continues and the ramifications reach far beyond the borders of the Peoples' Republic.

The U.S. must deliver an unequivocal, united message to the government in Beijing: Your flagrant disregard for the human rights of peaceful protesters is reprehensible and will not be tolerated.

Mr. HAMMERSCHMIDT. Mr. Speaker, the events in Beijing last June were shocking to this Congress, this country, and the free world. The use of lethal force in quelling student demonstrators seemed to be a vicious overreaction.

Our President's condemnation of the massacre and the imposition of carefully defined sanctions by Executive order were immediate, and firm. While steps have been taken—some say controversial steps—to keep official lines of communication open, that in no way diminishes earlier pledges of protection for Chinese students in the United States, reiterated publicly just this morning by the President in his news conference.

In our congressional zeal to impress upon the leaders in Beijing our abhorance of their actions, let us consider doing so in such a way as to encourage a return to the stirrings of political and economic reform in that nation.

The United States is limited in influence on internal policy in China. Expectations or speculations that democratic reforms there can take place with the same dramatic rapidity as in Eastern Europe overlook the wide differences in tradition, history, and circumstances.

Ostracism of China by the United States, or punitive sanctions and harsh rhetoric, will simply give Beijing hardliners reason to isolate themselves and their policy from world opinion.

Much has happened in China since that horrible June day. Certain actions, such as the release—unharmed—of 573 demonstrators, martial law being lifted, and a Voice of America correspondent being allowed to enter their country, give promise of more tempered policy.

The substance of the legislative sanctions and immigration amendments under consideration in Congress can be achieved administratively. To escalate that message by congressional action would be counterproductive to U.S. best interests longrange.

The message of U.S. shock and outrage is a valid one. It can be delivered more effectively and more productively by administrative than by legislative means.

Mr. Speaker, these are among the reasons I have voted to recommit the question of overriding the veto of H.R. 2712 to committee for further evaluation, and will subsequently vote to support the President's position.

Mrs. KENNELLY. Mr. Speaker, Chinese students in the United States fear persecution in their homeland, and this fear is well-founded. Official Chinese sources confirm that to date over 6,000 people have been arrested for their involvement in the peaceful uprising in China. Unofficial estimates run as high as 30,000.

In the last 6 months, at least 800 students have been arrested, including many leaders of the spring demonstrations. Many of these students have received sentences of 10 years in jail for their "crimes"; these crimes include "divulging State secrets" or what we would term, "criticizing the Communist Party and calling for democratic reform"; and "disseminating counterrevolutionary propaganda" and "destroying State property," what we would term "putting up posters."

Although martial law has been lifted in Beijing, conditions there remain fundamentally unchanged. Chinese citizens involved in the prodemocracy movement are labeled counterrevolutionaries and live under the constant threat of arrest or execution.

In addition, Chinese authorities have ordered all Chinese students to attend mandatory reeducation classes. Students are forced to serve time in the military—the military that attacked them in Tiananmen Square—or work in the countryside before they are allowed to continue their studies. As a result, university enrollment has dropped dramatically.

Yes, martial law officially ended and students are no longer trampled by Chinese tanks. However, by suppressing their right to think and challenge the political system in which they live, students are suffocated instead.

President Bush promises that Chinese students residing in the United States who fear political persecution in China will not be deported. He calls this legislation redundant. In fact, to some degree, he's right: this legislation implements his stated policy.

However, he is also wrong. This legislation is needed. It is needed to solidify the President's policy into law. It is needed to relieve the anxiety of the Chinese students. And most of all, it is needed to send a strong message to the Chinese Government that their ruthless actions have not gone unnoticed, nor will they be tolerated.

If redundancy is the President's best argument, I say let's be redundant. I urge my colleagues to join me in voting to override the President's veto. Thank you.

Mrs. LLOYD. Mr. Speaker, I rise today in support of the motion to override the President's veto of H.R. 2712, the Emergency Chinese Students Immigration Relief Act. While I believe the President has been a good manager of U.S. foreign policy, I believe his decision to veto H.R. 2712 was a mistake which Congress must correct.

Americans were shocked and outraged last June to see pictures from Tiananmen Square of tanks and armored personnel carriers callously running over peaceful student demonstrators and troops from the People's Army turning their weapons against those they were supposed to protect. Hundreds, if not thousands, of innocent people were killed. How, Americans asked themselves, could the Chinese leaders bring themselves to shoot their own citizens?

Americans justly demanded a response from their Government to these barbarous and heinous acts. The President imposed limited economic sanctions against China. Congress responded with a tougher, more comprehensive sanctions bill and passed the

Emergency Chinese Students Immigration Relief Act. Both the sanctions bill and the immigration bill enjoyed overwhelming bi-partisan support in Congress. H.R. 2712 was passed by the House unanimously.

Mixed with the pictures of an intransigent Chinese regime viciously putting down the promise of freedom and democracy were some hopeful images which suggested that, in time, the courage and determination of the Chinese students would bring them victory. The photos of a young man standing before a column of tanks and forcing them to stop was the most compelling of these hopeful images. The Chinese Government could not resist that type of courage and commitment forever, Americans told themselves.

American television screens were also flooded with hopeful images from halfway around the world, in Eastern Europe, where Communist power in Poland was collapsing. Solidarity was swept into office by the Polish people. The Poles made it clear that they had had enough of communism and wanted a legitimate government which respected the values of freedom and democracy in its place. Poland is now headed by its first non-Communist Prime Minister since the close of World War II.

The democratic revolution in Poland turned out to be the first in a series of peaceful, democratic revolutions that were to sweep through Eastern Europe the next 6 months. Only Romania's revolution was tainted by widespread violence. As the Berlin Wall came down, as Vaclav Havel assumed the Presidency of Czechoslovakia, and as Poland and Hungary made even greater strides towards democracy and market-oriented economies, it seemed that the tide of history has swung decisively in favor of freedom and democracy and that China would eventually succumb to its powerful current.

Americans had been told, and rightly believed, that events in Eastern Europe resulted in part from the determination of U.S. foreign policy to stand firm against the tyranny of communism. Faced with the immutable commitment of the United States and its Western European Allies to freedom and democracy, Eastern Europe was forced to come to grips with the inherent failures of communism and move towards pluralism and the free market. Americans expected the United States to pursue a similar policy towards China. The initial rhetoric from the White House following events in Tiananmen Square suggested that the United States would adopt a tough policy against the repression in China.

The President followed up his rhetorical denunciation of the Tiananmen Square massacre by sending two high-level delegations on secret missions to China. The images of the bloody assault against the students who had been peacefully demanding freedom and democracy were replaced by high level Bush administration figures smiling and toasting those who had ordered the execution of the demonstrators. Americans responded with moral indignation to the images of the administration embracing octagenarian leaders in Beijing. Why, they asked, had a policy so successfully applied to the Communist dictators of Communist Eastern Europe, been abandoned in dealings with the Communist dictators in China?

The President followed his secret missions to China with a veto of H.R. 2712. He claimed that Chinese students in the United States could be protected by issuing a Presidential directive and that legislation was not necessary. Unfortunately, this is not true. The President's directive lacks a legal foundation because a number of its provisions are in direct conflict with existing immigration law. H.R. 2712 avoids this pitfall as well as others.

The President also cautioned Congress against reacting rashly to events in China. The United States needs to look at the bigger picture, he said, and cannot afford to isolate China. I want to state clearly, that the United States has not isolated China. China's leaders have isolated themselves. They gave the order to attack the demonstrators in Tiananmen Square; they are responsible for the deaths of hundreds of innocent people; they brought upon themselves the condemnation of the world. The big picture is a panorama hopefully displaying the rise of democracy and freedom around the globe. Only the dark clouds of China and the Bush administration's reaction to events there disturb the scene.

Mr. Speaker, I support the motion to override the President's veto of H.R. 2712 and urge my colleagues to do so as well.

Mr. LAFALCE. Mr. Speaker, I rise in support of overriding the President's veto of the Chinese immigration bill.

The passage of this legislation has a special significance for me and all the western New Yorkers following the case of Li Jin Mu. In Niagara County, NY, there is a young Chinese man in jail who is awaiting the outcome of his petition for asylum. In China, Li Jin Mu's wife was forced to have four abortions after their first child. But at the start of the last pregnancy, Li and his wife decided to leave China and seek the protection that they heard about on Voice of America.

Last March, Li and his pregnant wife left China and smuggled themselves over the United States border. The couple was caught and jailed. Li's wife was released from jail because of her pregnancy and soon after, she gave birth to a baby girl. Unfortunately the baby's father is still subject to deportation to China, where he is certain to meet persecution. Now in jail, Li seeks asylum and is likely to remain imprisoned for several months before his case is settled. He says this treatment is not what was depicted on Voice of America, but that jail, even death is better than what the family will face if returned to China.

Li's family is one of the few known cases of Chinese nationals seeking protection in the United States from China's one couple, one child law. President Bush has issued an administrative directive which would seem to protect both Chinese students and couples escaping forced abortion, but to date the President's action has been narrowly interpreted. We must make it clear that Chinese nationals like Li and his family are protected by our immigration law. A vote today to override the President's veto will do just that.

Mr. SIKORSKI. Mr. Speaker, I submit this statement to the RECORD to express my support for the override of the President's veto of H.R. 2712, the Emergency Chinese Adjustment of Status Facilitation Act. The University of Minnesota has approximately 650 Chinese students and scholars, the single largest population of Chinese exchange students on any campus in the United States. They are a valuable asset to our educational system, enhancing our multicultural understanding and providing us with their talented research skills.

But this issue is not only of supreme importance to me because many of these students are in my State, but rather as an American and strong advocate of human rights. I was appalled to see the brutal crushing of the students peacefully rallying for democracy in Tiananmen Square in Beijing. Like our own ancestors these students cried out for their freedom even using quotes such as "Give me liberty or give me death." I am further horrified by this administration's kowtowing to this repressive government, which has not taken one singular consequential measure to abide by international human rights standards in the aftermath of the Tiananmen massacre.

Unfortunately, the conservative, more repressive wing of the Chinese leadership has taken over the Government and they have taken every possible step to ensure that this freedom movement has been squelched. We have all witnessed the arbitrary arrests, incarceration, and execution of many innocent individuals. Asia Watch has reported the slaying of 40 prodemocracy activists and the official Chinese estimate of 6,000 arrests falls far short of the unofficial number of 30,000. Many of these students have been sentenced to 10 years imprisonment for their counterrevolutionary activities. And these abuses are extending from within their own borders into our town. Chinese students who have participated in the prodemocracy movement in the United States are being threatened with retaliation by the Chinese diplomatic corp.

We must not abandon them in their time of need, but rather look for opportunities to help them by first, letting the Chinese Government know that these demonstrations, and their subsequent reactions, will have implications for future United States-Chinese relations; and second, protecting Chinese nationals here in the United States. President Bush has decided to do neither.

Chinese nationals in the United States have good cause to fear for their lives and, quite understandably, are afraid to return to China in its present state. The President's administrative directive fulfills the desires of the Chinese Government but does little to allay the fears of Chinese nationals. The administrative directive calls for waivers that are in direct contradiction with existing law and could be subject to court challenge. Additionally, since it makes no regulatory or statutory changes, it can be withdrawn at any time.

Modifying the Immigration and Nationality Act is the humane and compassionate response that expresses the beauty of our system of government and separates us from barbaric, totalitarian regimes. These students represent what the United States fought to obtain over 200 years ago. They represent the freedom to choose, the freedom to live their lives to the fullest, and the freedom to say "I don't agree." We must turn toward these stu-

dents, not away, and aid them by supporting the status adjustment.

Mr. VENTO. Mr. Speaker, I rise in strong support for this legislation and urge my colleagues in the House to override the President's veto.

The importance of this bill to the 32,000 Chinese students now in the United States cannot be overemphasized. Without the waiver of the 2-year home residence requirement provided by this bill, these students face an uncertain future when they return to China on completion of their studies.

I have spoken with and heard from many of these students in Minnesota since the brutal and tragic massacre of prodemocracy forces in Tiananmen Square. They have conveyed their personal fears and apprehensions about returning home to China to me. In addition to fear, they are also puzzled by the U.S. Government's actions since Tiananmen and consequently have raised many appropriate questions. How could the United States, the beacon of freedom and refuge for the oppressed in the world for over 50 years, be so overly concerned about offending the feelings of the Chinese leaders responsible for the slaughter of hundreds of innocent persons advocating democracy in a Communist country? Why aren't we standing side by side with the brave prodemocracy forces in China and their counterparts in the United States?

I shared their puzzlement about the administration's actions and have taken steps to support prodemocracy students rather than the Chinese regime led by antidemocracy authoritarians. I voted for a tougher set of sanctions than those put in place by President Bush and am an original cosponsor of H.R. 2712 and wrote personally to the President urging him not to veto this bill. While I do not doubt the President's intentions, I strongly disagree with his judgment on this issue. We need solid statutory protection for the Chinese students in the United States, Not a weak administrative order which can be rescinded at the sole discretion of a President.

During the past several months, some phenomenal events have taken place in the world which have made the steadfast resistance of the Chinese Government to allow even a limited amount of democratic expression even more reprehensible. It is no wonder that the historic changes occuring in Eastern Europe are being kept secret to the Chinese people. As our spirits are lifted by the tearing down of the Berlin Wall and the withering away of the Communist regimes in Eastern Europe, we must not forget the terrible tragedy of Tiananmen and the continuing repression of prodemocracy students in China.

Chinese students in the United States have very legitimate fears about returning to this climate of fear and repression in China. Today we have an opportunity to protect these students and send an important message to the Chinese Government. I urge my colleagues to support the veto override before the House today.

Mr. LEHMAN of California. Mr. Speaker, today I rise in support of the veto override of the Emergency Chinese Student Relief Act. This bill will waive for 4 years, for Chinese students with J-visas, the current-law requirement that holders of J-visas must return to their home country for at least 2 years before applying for an adjustment of their immigration status.

This bill is vitally important in order to provide legal protection to the 73,000 Chinese students who were in the United States during the Tiananmen Square upheaval. The President's directive to the Immigration and Naturalization Service is not adequate for a number of reasons. First of all, it is without legal validity because a number of its provisions are in direct conflict with the existing immigration law. In addition, the directive can be withdrawn or modified at any time. Last, it gives the wrong message to the regime in Beijing. At this time we should not be sending confusing signals; we need to express our disgust for Beijing's brutally repressive policies and our support for those who had the courage to stand up against them.

Most importantly, the President's directive does not provide the protection that the Chinese students across the United States need and desire. It does not alleviate the fear that the students and their families experience every day. Many of these students in the United States who were involved in demonstrations here are afraid with good reason to return to China. We must ensure their safety. As long as they do not have permanent legislative protection they will live in fear and their families will be subjected to threats and harassment.

Mr. Speaker, today in a unified voice we must override the veto of the Emergency Chinese Students Immigration Relief Act. We will be accomplishing two very important functions. We will be demonstrating our support for the Chinese students both here and in China, as well as sending the proper signals to the Chinese Government that we will not tolerate its violently repressive actions.

Mr. BRENNAN. Mr. Speaker, today we consider whether to override the President's veto of H.R. 2712, legislation which protects Chinese nationals currently studying in the United States.

I have been a strong supporter of this bill, simply because I feel that forcing anyone who faces certain danger in a foreign country to return to that country would disgrace a nation which consistently prides itself on being a haven for those in need.

The President himself agrees that we cannot send these students back. However, his alternative to this legislation is unacceptable. President Bush seeks to protect these students through an administrative directive. Such action is clearly without a satisfactory guarantee of protection. As there could be a change in the White House before there is a change in Beijing's attitude toward the Chinese students who seek democracy.

The President's plan fails to send a clear enough message to either the Chinese students in this country or to Beijing. We cannot adopt a policy that can be altered at whim, one which, in fact, hovers tentatively between what the administrations of the two nations would like and what the students need. We must instead demonstrate an honest commitment to standing our legacy of freedom for all people.

The only solution is to pass this legislation today, to reinforce our commitment to freedom with law. I urge my colleagues to join me in support of this veto override and in support of human rights.

Mr. WEISS. Mr. Speaker, hundreds of Chinese have been convicted and sentenced to prison terms in recent months for counterrevolutionary crimes based on their involvement in the recent student led democracy movement. In addition to those accused of counterrevolutionary crimes, an undetermined number of Chinese citizens remain in detention without formal charges. Press reports have stated that as of last July close to 10,000 people had been detained or arrested. Arrests of prodemocracy activists continue, unannounced and unreported in the official press.

Some 32,000 Chinese students are currently in the United States under the Exchange Visitor Program and many of these students, like their counterparts in China, spoke out on behalf of democracy and against their brutal and repressive government. They courageously petitioned, marched, and appeared in the mass media. The Chinese Government knows who these prodemocracy activists are.

The need for a law to ensure sufficient protection for these Chinese students is overwhelmingly clear. Although the Congress has already approved such a law, the President has rejected this legislation and issued a much weaker directive as a substitute. This directive simply does not ensure the Chinese students adequate protection.

The administration's directive not only conflicts with existing law and is subject to court challenge but it also permits INS regional offices to interpret its measures in a restrictive and arbitrary manner. In addition, the directive makes no regulatory or statutory change and can be withdrawn anytime at the unreviewed discretion of the President and the U.S. Attorney General. Furthermore, the program would require students to relinquish permanently their current lawful status and thereby abandon their ability to adjust to some other legal status in the future.

It is clear that our country must change its laws to adequately protect these endangered students. We do not want to repeat, in a lesser form, the egregious mistakes made when the United States closed its doors to victims of the Holocaust during World War II. Instead of welcoming Jews seeking refuge in this country, the U.S. Government resisted efforts to ease rigid immigration laws and increase the number of Jewish refugees permitted to enter.

A bill that would have allowed 20,000 German Jewish children to enter the United States outside the quota was defeated in 1941. Other bills and appeals to the administration to permit refugees to enter by mortgaging future quotas and to open Alaska to them met the same fate. The State Department imposed even more complicated and time-consuming procedures on applications for visas. In the mid-1940's, when precious unused visas would have saved lives, the official in charge recommended putting "every obstacle in the way" and suggested various administrative devices that would "postpone and postpone and postpone the granting of visas."

Fortunately, some refugees were granted admission between 1934 and 1941. Among

these were a brilliant army of refugee scientists, writers, artists, and scholars including Albert Einstein, Ernst Simmel, Erich Fromm, Erik Erikson, and Herbert Marcuse.

Although we cannot correct the egregious errors that the United States has made in past immigration policies, we can prevent future suffering and death. I urge my colleagues to show that we have learned the tragic lessons of history and to act before thousands more fall victim to the treacherous hand of oppression. I urge my colleagues to vote to override President Bush's veto of H.R. 2712 and provide the endangered Chinese students with guaranteed protection.

Mr. GREEN. Mr. Speaker, the People's Republic of China nationals who have come to study and work in our country should not live in fear that we shall one day turn them over to a government that seems to know little mercy and to leaders who perceive democracy to be a threat rather than a promise. The best way we can provide them with that security is to enact H.R. 2712. Thus, I rise today to encourage my colleagues to vote to override the President's misguided veto.

The administration argues that its directive on this issue is sufficient to ensure the same protections as those contained in H.R. 2712, and therefore that congressional action on the issue is unnecessary. The fact is, however, that the administration's measures to grant immigration relief to People's Republic of China nationals are subject to serious legal challenge. They are, on numerous accounts, beyond authority in current statute and concomitant regulation. And, perhaps most importantly, the administration's directive can be withdrawn at any time. What kind of security are we providing to both the People's Republic of China nationals involved and their future employers with only potentially temporary assurances?

Our administration has to be much tougher than it has been in demanding substantive reform within the People's Republic of China leadership. Congress has been unwavering in demanding that the administration hold the People's Republic of China Government accountable for the horrifying massacre of its citizens last June and the subsequent repression of basic human rights. Today we have a chance to let the President know just how committed we really are to staying that course. Let us stand firm and vote "yes" to override his veto.

Mr. FAZIO. Mr. Speaker, I strongly support today's effort to override the President's veto of H.R. 2712.

Today's veto override vote is a reaffirmation of our commitment to democracy and the Chinese citizens who share our commitment and envision it for their own country. Although the President claims that this legislation is unnecessary, it represents the only realistic means to ensure the safety of the Chinese citizens residing in the United States as exchange visitors.

The administration directive to the Immigration and Naturalization Service as a replacement for the legislation is wholly inadequate. First, it is of questionable legal validity and conflicts with Congress' power to statutorily set immigration policy. Overriding the veto will insure that the Chinese citizens in the United States are completely and unquestionably protected under the law.

A second and equally important concern is that the directive can be withdrawn or modified at any time, thereby leaving the fate of the Chinese visitors to the unreviewed discretion of the President and the Attorney General. These individuals need a commitment, a guarantee that they can exercise the freedom to speak out in the United States without fear of reprisal. No amount of verbal assurances will substitute for legislation.

At a time when the world increasingly looks toward democracy, we cannot afford to diminish our support for democracy. And just as China has shown no signs of easing its crackdown on reformers, we should be equally committed to our concern for the safety of the Chinese nationals in the United States and our support for human rights. Let's maintain the unanimous support for this legislation and override the President's veto.

Mr. HEFLEY. Mr. Speaker, I rise today to strongly urge my colleagues to stand up for basic human rights of Chinese students in the United States and vote to override the President's veto of H.R. 2712.

In order for there to be true changes in immigration policies of Chinese nationals, Congress must establish statutory guidelines which will be applied to immigration boards and judges. As my colleagues know, guidelines have been issued twice before by the administration, and the immigration boards and judges stated the interpretation of the guidelines did not apply to them.

The INS still seeks deportation orders against those students seeking asylum stating that, as a matter of law, their defiance of Government orders does not constitute "political dissent." Well then, ladies and gentlemen of the House, what we need is legislation that does protect these students.

The President's directive has good intentions and is well meaning. However, how can we be sure the immigration boards and judges will adhere to the President's directive. Well, we can't be sure, that is why this legislation is so badly needed.

As the repression in China continues and becomes more severe, the Chinese students here at home truly fear for their lives. Until statutory protection is granted, the fate of these Chinese nationals remains uncertain. Therefore, I urge my colleagues again to stand up for basic human rights and join with me and vote to override the President's veto of H.R. 2712.

Mr. KLECZKA. Mr. Speaker, this Congress must not allow the Bush administration to ignore the plight of 42,000 Chinese students stranded here, whose rights are now in very real jeopardy by anti-democracy violence and suppression in their homeland.

I am unwilling to stand aside and permit the undoing of the human rights to which this Nation is bound at home and abroad.

This Nation once forced thousands of people who had escaped from persecution in Hitler's Germany to return to a Holocaust. We have learned much from that lesson, and I do not believe we will repeat it today.

The administration's order to protect Chinese students in America is much too little and far too late. It is a weak and faulty alterntive to Representative PELOSI's bill.

These students have no one else to turn to now in their time of trouble. I urge my colleagues to override the veto and send a message to Chinese Premier Li Peng and the Bush administration.

America should remain a sanctuary for those whose human rights are threatened elsewhere.

Mr. PAYNE of New Jersey. Mr. Speaker, since the Tiananmen Square massacre, 7 months ago, thousands of dissents have been arrested and at least 40 persons executed in further repression of anti-government sentiments. Communism is on the decline the world over, yet the Chinese Government has persisted to reinforce its position by denying basic human rights and the democratic process to its citizens. Worst of all, the President of the United States has certified China's intransigence to change through two actions: His reestablishment of full diplomatic relations and veto of H.R. 2712. Both actions were performed with complete disregard for the will of the American people.

International organizations have accurately reported human rights violations doled out by the Chinese regime. As a member of the congressional human rights caucus, I can attest to the credibility of these reports. Because Chinese law is so loosely written and defined, actions as hanging posters that call for political reform or criticize the Communist Party in any way may result in imprisonment or execution. Consequently, students who merely expressed their ideological beliefs have reportedly received 10-year sentences for allegedly divulging state secrets, destroying state property or disseminating counterrevolutionary propaganda.

In response to America's outrage, Congress unanimously passed H.R. 2712. The bill is designed to protect Chinese students currently residing in the United States who may have sympathized with the pro-democracy movement. In the House the vote was 403 to 0, in the Senate, 100 to 0.

When justifying his veto of H.R. 2712, President Bush claimed that enactment of the bill would taint the future of cultural, political and economic exchange between the U.S. and mainland China, and erode the Executive's role in foreign policymaking. Well, I disagree with both assumptions.

First, what the President fails to understand is that the global failure of communism mandates that we not placate China. Economically and politically they need us more than we need them. Second, is it worth sacrificing the lives of thousands of young Chinese men and women who have come to believe in democracy, simply to make a point about which branch of government is the preeminent foreign policy enforcer? I think not.

I am not willing to gamble away the lives of those young men and women through mere speculation. I am not willing to return those students to a repressive regime that will undoubtedly try many of them for baseless crimes against the state. But I am willing to protect those persons by voting yes on H.R. 2712, and I urge my colleagues to join me. I want to send to message to the President and

the Chinese Government, that America is a nation that respects human rights, a nation where an individual's rights come first, not executive privilege. Thank you.

Mr. FOGLIETTA. Mr. Speaker, I think that we all know the facts of this case. We have 70,000 Chinese students in the United States on J visas who, under current law, could be forced to return to possible imprisonment or even execution.

This bill would allow the students, who believe returning to China may threaten their lives, to stay here legally and without fear. It would also give them the security to continue their public support for the democracy movement in their homeland.

This country stands for freedom and democracy throughout the world, for all people. Let's not send these innocent students back to potential death or imprisonment.

Let's not leave them with the constant anxiety that their status depends on an administration that is infatuated with the idea of a relationship with China—no matter what the consequences.

Vote "Yes" for the override.

Mr. Speaker, I rise today to urge my colleagues to vote to override the President's veto on H.R. 2712, the Emergency Chinese Students Immigration Relief.

First I want to commend the work of Congresswoman PELOSI in putting together this excellent legislation. I also want to express my appreciation for the leadership's decision to make this bill a top priority.

Mr. MOODY. Mr. Speaker, I strongly support the legislation before us today that will extend the visas of Chinese students here in the United States. I hope that both the House and Senate will vote to override President Bush's veto of this bill by a strong margin.

This legislation will accomplish two things. First, it will eliminate the 2-year foreign residence requirement for these students, Second, it will modify the Extended Deferred Departure program to allow the students who qualify to apply for permanent resident status. I feel that these measures are of utmost importance to Chinese students who are here in the United States and fearful of returning to China today.

These students, regardless of their personal views, come under suspicion by the Chinese Government simply because they have taken the opportunity to study at an American institution. We must recognize that reality and address it.

This veto override is important for two reasons.

First, it provides statutory guarantees—over and above the administrative steps that have been taken—to the Chinese students who need this protection and certainty.

Second, it sends a very clear signal to the Chinese Government that the people of the United States have not forgotten the events of Tiananmen Square; they have not forgotten the democratic aspirations of the Chinese people; and they are not willing to act as if it were "business as usual" in China.

I salute the Chinese students here and in China that have had the courage to speak out again and again. I salute all the people of China who have dared to demand freedom. In passing this legislation today, we send a clear signal that we are on their side.

Mr. TORRICELLI. Mr. Speaker, some have suggested that instead of a veto override for H.R. 2712, Congress should put the override aside, by referring it or otherwise, and protect Chinese nationals by enacting a new bill. Their argument goes that if any congressional action were needed, the dispute with the President over his asserted pocket veto threatened by the Justice Department could be avoided by Congress just putting the veto aside. Passing another bill, we are told, would be a supposedly simple step, given the tremendous bipartisan-partisan support for protecting Chinese nationals and an entire session of the Congress before us.

This argument is deceptive and unpersuasive. Any diversion to attempting a new bill would mean further delays and uncertainties in protecting the concerned Chinese students. Moreover, starting over with a new bill would create real risks that this immigration protection would get wrapped up in the entire question of proposals for economic sanctions. This risk is doubly present when any new bill of ours reaches the other body, where such a proposal would be subject to all kinds of nongermane amendments, jurisdictional disputes, filibusters, second conferences, and other complications.

By resolving this veto override, we are recognizing that the President's veto, under the Constitution, is meant to give Congress a clear choice—should the Emergency Chinese Immigration Relief Act, exactly as both Houses already voted for it, be enacted despite the President's objections? Let us answer that question with a clear "yes."

Mr. JAMES. Mr. Speaker, today we are considering the Emergency Chinese Immigration Relief Act of 1989. I am voting to override the President's veto on the status of Chinese student visas. The reason for my vote is simple. The Chinese students in both this country and in China have demonstrated great bravery and commitment to democratic principles by standing up to the dictatorial Communist regime in China. They are defenders of freedom. We cannot abandon these brave men and women in their hour of need. If they returned home now, they would face immediate arrest and possible execution. America was founded on the principles of liberty and democracy for all mankind, and we must help those who defend these sacred principles. My vote is a vote to confirm all that we stand for, and I will continue to fight against oppression wherever it exists in the world.

Mr. FISH. Mr. Speaker, I yield back the balance of my time.

Mr. BROOKS. Mr. Speaker, I yield back the balance of my time and I move the previous question.

The previous question was ordered.

The SPEAKER pro tempore (Mr. KILDEE). The question is, Will the House, on reconsideration, pass the bill, the objections of the President to the contrary notwithstanding?

Under the Constitution this vote must be determined by the yeas and nays.

The vote was taken by electronic device, and there were—yeas 390, nays 25, not voting 16, as follows:

[Roll No. 4]

□ 1724

The Clerk announced the following pair:

On this vote:

Mr. Kolbe and Mr. Bilirakis for, with Mr. McDade against.

Mr. HAWKINS changed his vote from "nay" to "yea."

So, two-thirds having voted in favor thereof, the bill was passed, the objections of the President to the contrary notwithstanding.

The result of the vote was announced as above recorded.

The SPEAKER. The Clerk will notify the Senate of the action of the House.

GENERAL LEAVE

Mr. BROOKS. Mr. Speaker, I ask unanimous consent that all Members may have 5 legislative days in which to revise and extend their remarks on H.R. 2712, the bill just passed.

The SPEAKER. Is there objection to the request of the gentleman from Texas?

There was no objection.

PERSONAL EXPLANATION

Mr. NELSON of Florida. Mr. Speaker, had I been present on January 24, 1990, I would have voted "aye" on rollcall 4; "nay" on rollcall 3.

REMOVAL OF NAME OF MEMBER AS COSPONSOR OF H.R. 3456

Mr. SAXTON. Mr. Speaker, I ask unanimous consent that my name be removed as a cosponsor of H.R. 3456.

The SPEAKER. Is there objection to the request of the gentleman from New Jersey?

There was no objection.

APPOINTMENT OF CONFEREES ON H.R. 2364, AMTRAK REAUTHORIZATION AND IMPROVEMENT ACT OF 1989

Mr. SWIFT. Mr. Speaker, I ask unanimous consent to take from the Speaker's table the bill (H.R. 2364) to amend the Rail Passenger Service Act to authorize appropriations for the National Railroad Passenger Corporation, and for other purposes, with a Senate amendment thereto, disagree to the Senate amendment, and agree to the conference asked by the Senate.

The SPEAKER. Is there objection to the request of the gentleman from Washington?

The Chair hears none, and appoints the following conferees:

From the Committee on Energy and Commerce: Messrs. DINGELL, THOMAS A. LUKEN, ECKART, SLATTERY, BOUCHER, LENT, WHITTAKER, TAUKE (except for section 4 of the House bill and section 4 of the Senate amendment), and BLILEY (solely for section 4 of the House bill and section 4 of the Senate amendment).

Additional conferees:

From the Committee on the Judiciary (solely for section 4 of the House bill and of the Senate amendment): Messrs. BROOKS, MAZZOLI, EDWARDS of California, FISH, and MOORHEAD.

The Chair will reserve authority to appoint additional conferees.

LEGISLATIVE PROGRAM

(Mr. GINGRICH asked and was given permission to address the House for 1 minute.)

Mr. GINGRICH. Mr. Speaker, I ask for this time for the purpose of inquiring of the distinguished majority whip the legislative program.

Mr. GRAY. Mr. Speaker, will the gentleman yield?

Mr. GINGRICH. I am happy to yield to the gentleman from Pennsylvania.

Mr. GRAY. Mr. Speaker, tomorrow the House meets at 11, but there is no legislative business. Friday the House will not be in session.

On Monday, the House meets at noon, but there is no legislative business. On Tuesday the House will meet at noon and there will be suspensions, and on Wednesday the House will meet at noon to consider the National Voters' Registration Act of 1989, and the House will recess until 8:30 p.m. on Wednesday and will reconvene at 9 p.m. to receive the President of the United States in a joint meeting for the State of the Union Address. On Thursday, February 1, the House meets at 11 a.m., and there will be no legislative business. Then on Friday, February 2, the House will not be in session.

Mr. GINGRICH. Mr. Speaker, let me, if I might, ask of my friend, the gentleman from Pennsylvania: The gentleman mentioned suspensions on Tuesday, January 30. We are currently listing S. 1521, relating to the police force of the National Zoological Park. Does the gentleman expect any other suspensions, and would he happen to know what they are?

Mr. GRAY. If the gentleman will yield further, not at this point. I would say to the distinguished gentleman from Georgia, the minority whip, we do not expect any, but certainly there will be proper notification of the minority and consultation before any addition.

Mr. GINGRICH. I also wanted to ask: There are two actions with relation to Panama. One is a resolution which I understand was initially drafted and then pulled this week commending our troops for their effort in Panama and commending the Panamanian people and possibly commending the President for his decision there. The second was something we have discussed before about lifting the sanctions that were imposed on Panama while Noriega was in charge.

Does the gentleman have any information on when those two might come to the floor?

Mr. GRAY. If the gentleman will yield further, it is my understanding that the Committee on Foreign Affairs is considering both of those items. I would say to the minority whip, the gentleman from Georgia, that there is considerable support on both sides of the aisle on both of those issues, and so what we are trying to do is to allow the regular process of the Committee on Foreign Affairs to do its work and bring it in regular order to the floor so that the body may act on both of those issues.

□ 1730

Mr. GINGRICH. Mr. Speaker, I appreciate that information. I gather the gentleman does not know at the present time how rapidly they might produce those two?

Mr. GRAY. At this time we have no indication from the Committee on Foreign Affairs as to how soon that will occur, but we are hopeful that the order will proceed in a regular manner. We know there are many Members of the House on both sides of the aisle that would like to address those issues.

Mr. GINGRICH. Is it the intention of the gentleman on Tuesday to roll a vote, if one is requested on S. 1521, over to Wednesday, or will there be a vote on Tuesday?

Mr. GRAY. We think that a vote is unlikely at this time on that issue, so we think that there may not be a vote on Tuesday.

Mr. GINGRICH. Mr. Speaker, I appreciate the gentleman helping us understand what the legislative business for next week will be. It is my understanding on our side that whenever the conferees are appointed for the oilspill bill, that it is very likely there will be a motion to instruct conferees which would lead to a recorded vote. Obviously if that appointment of conferees were made on Tuesday, Members might then be faced with a vote.

Does the gentleman know offhand if it is likely either on Tuesday or Wednesday conferees might be appointed?

Mr. GRAY. At this time I cannot tell the distinguished gentleman exactly when the conferees will be appointed. Knowing that that motion is in the offing and that there would be a vote, I am certain that the leadership on this side of the aisle will make sure that it is done in a manner so that people will be able to be present and to express their will on that motion to recommit.

Mr. GINGRICH. I was partly asking because we have a good colleague from New Jersey who has worked long and hard on that bill and desires to have that opportunity. I wanted to make sure that the gentleman would have more than enough notification if he needs to be here on either Tuesday or Wednesday.

Mr. GRAY. I can assure the distinguished gentleman he would have more than enough notification with regard to that issue, and, as has been done in the past, the Speaker would certainly consult with the minority so that any motions to recommit would be entertained properly and all persons would be notified so that the House can work its will.

Mr. GINGRICH. Mr. Speaker, I thank my friend and look forward to working with him next week.

HOUR OF MEETING ON WEDNESDAY, JANUARY 31, 1990

Mr. GRAY. Mr. Speaker, I ask unanimous consent that when the House adjourns on Tuesday, January 30, 1990, it adjourn to meet at noon on Wednesday, January 31, 1990.

The SPEAKER pro tempore (Mr. DARDEN). Is there objection to the request of the gentleman from Pennsylvania?

There was no objection.

DISPENSING WITH CALENDAR WEDNESDAY BUSINESS ON WEDNESDAY NEXT

Mr. GRAY. Mr. Speaker, I ask unanimous consent that the business in order under the Calendar Wednesday rule be dispensed with on Wednesday next.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from Pennsylvania?

There was no objection.

ANNOUNCEMENT BY THE SPEAKER PRO TEMPORE

The SPEAKER pro tempore. The Chair will now entertain requests for 1 minute speeches.

VETO OVERRIDE OF H.R. 2712

(Mr. BROWN of California asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. BROWN of California. Mr. Speaker, I rise today to express my strong support for the veto override of H.R. 2712 and to praise my colleagues in the House for their overwhelming vote in support of the Chinese students in the United States. This legislation would allow Chinese students studying in the United States to remain here until they are able to return to their homeland free of fear from government persecution. In my view it would be simply unconscionable to force over 30,000 Chinese students back into the clutches of a repressive and murderous government. H.R. 2712 will provide comprehensive legal safeguards for these students, and, despite the President's statement that he can and will protect these students without additional legislation I believe that he was sorely misguided in vetoing the bill.

We have heard a great deal over the last decade about promoting freedom and democracy abroad. Unfortunately, China's own reform movement was brutally quashed last June in Tiananmen Square. Since that time the Chinese Government has shown little willingness to consider the democratic aspirations of its own people. Mr. President, despite your desire to maintain good relations with China, which I fully share, now is not the time to pursue business as usual with that country. Chinese students living in the United States need the protection provided by this legislation. The message we send today in overriding the President's veto is the right message. The events at Tiananmen Square were barbaric, and have not been forgotten and should not be forgiven.

FREE AND FAIR ELECTIONS IN NICARAGUA

(Mr. BALLENGER asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. BALLENGER. Mr. Speaker, Daniel Ortega is pulling another stunt. He is holding hostage funds appropriated by Congress, blaming it on bureaucratic redtape. IPCE, the nonprofit organization dedicated to recruiting and training opposition poll watchers, has not received their $1.5 million in funds to operate. UNO has not received the funds or the office equipment and vehicles purchased by U.S. funds.

On October 4, 263 of us voted to give $9 million as insurance that Nicaraguans have the opportunity to participate in the running of their government. The funds would help counterbalance the blatant use of government resources by the Sandinistas to maintain power.

Last week, I returned from Nicaragua cautiously optimistic over the preparations. Violeta Chamorro and the UNO opposition party have the hearts of the people with them.

What they do not have are resources. We fought a hard battle to obtain the funds for prodemocratic activities in Nicaragua, and the National Republican and Democratic institutes dodged many obstacles to send the funds to Nicaragua.

While Daniel Ortega is using government bureaucracy to hold up the release of opposition funds, I saw him give away nine new Soviet-made tractors and numerous tracts of land to those attending his rally. Do not tell me that FSLN campaign funds paid for those door prizes. And UNO can't even pay anything to those dedicated to assuring the ballot boxes aren't stuffed.

I met with representatives of the United Nations Observer Mission. They claim, and I'm sure you will agree, that if even 50 percent of the polls are without opposition watchers and the Sandinistas claim victory, no one will say the election was fair. Therefore, it is in Oretega's best interest to release our funds.

Ortega's latest ploy serves only to exemplify his fear of losing.

I saw UNO supporters turn out by the hundreds to show support for the Chamorro ticket. They are ready to

see a change in government and are sick of the repressive Sandinista regime. I hope you are as outraged as I that Daniel Ortega is trying to undermine the will of the Nicaraguan people.

CHINESE STUDENTS LEGISLATION VETO OVERRIDE

(Mr. SCHEUER asked and was given permission to address the House for 1 minute and to revise and extend his remarks and include extraneous matter.)

Mr. SCHEUER. Mr. Speaker, our vote today to override the President's veto of H.R. 2712, the bill protecting Chinese students from deportation, showed that this House is not confused by the administration's dubious justification of its veto—that the veto could appease China's leaders without in any way hurting or endangering Chinese students in this country.

Mr. Speaker, that is incredible and inconceivable on its face. Why oh why were China's leaders appeased by a veto that President Bush now says would have had no effect?

The reason China's aging tyrants were appeased by the President's veto is the very same reason that Chinese students here were mortally terrified by it: Both groups knew the protection provided by the Executive order alone—without the backing of law—could be tenuous and ephemeral, and could be revoked by the President at any time, just as easily as it was invoked by him.

Mr. Speaker, just as President Bush sent a message when he vetoed the bill, that many of us found unacceptable and offensive, this House today sent a message even more loud and clear, a message of freedom, that will reverberate from Washington, throughout this country, and all the way to the government halls of power in Beijing.

I enclose the eloquent editorial from today's New York Times:

[From the New York Times, Jan. 24, 1990]

ON CHINA, TRUST IS NOT ENOUGH

Congress now has an excellent opportunity to show Beijing, and President Bush, how the American people feel about the backward-looking policies of China's fading leaders, and the Administration's shameful apologetics on their behalf. It can do so by voting this week to override Mr. Bush's veto of a measure that could help guarantee Chinese students in this country a chance to stay.

The bill, originally sponsored by Representative Nancy Pelosi, California Democrat, passed both houses overwhelmingly. But the President, heeding Chinese demands, vetoed it last month, just as he sent his high-level aides off to China. For Congress to override would clearly signal that the American people are not yet ready for business as usual with the butchers of Beijing.

Any Administration is entitled to considerable leeway from Congress in the routine conduct of foreign relations. And the Administration notes, correctly, that it has, by executive action, granted students the same right to apply for renewal of their visas without first returning home. But that just makes the veto look like a transparent attempt to appease Beijing.

China is anything but a routine foreign policy issue. Sino-American relations directly affect more than a billion people. They touch on a wide range of issues, including America's human rights standards, military cooperation between two nuclear powers and attitudes toward the murderous Khmer Rouge in Cambodia.

The right way for a President to handle such questions cannot be simply to say: Trust me, I'm an old China hand. Since the surprise December mission to Beijing., Americans have made plain their deep distrust of the President's China initiatives—even before the Administration admitted earlier high-level contacts with Chinese leaders. Can Congress now trust the permanence of executive remedies for the student visa problem?

By overriding the veto, Congress can nudge America's China policies back toward decency.

RELEASE OF FUNDS FOR NICARAGUA ELECTIONS

(Mr. GOSS asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. GOSS. Mr. Speaker, it is time for Daniel Ortega and his Marxist/Sandinista government to get off the dime and start playing by the rules in Nicaragua.

The "dime" is actually more than $1 million of United States money—money appropriated in good faith by this Congress to promote a free and fair election in Nicaragua next month—money that is desperately needed to recruit and train opposition poll watchers—money that has become bogged down in apparently endless Sandinista redtape.

Mr. Speaker, my good friend from North Carolina, Mr. BALLENGER, and I spent 3 days in Nicaragua, talking with everyone from members of the U.N. observer team to church leaders to opposition leaders to plain, old citizens.

The message from all sides was unmistakeable: There is an air of expectation that elections will happen. Real progress has been made in the struggle to conduct truly democratic elections in a country where such a thing is a novelty. but with that progress has come the potential for serious pitfall.

As he has done so often in the past, Daniel Ortega has shown himself adept at deliberate mischief making. He's using his power and total government control to thwart the process by withholding funds for poll watching and verification of registration.

Without opposition poll watchers at the more than 4,300 polling stations in Nicaragua, this election process will make the brinks robbery look like petty larceny.

It's time for the Sandinistas to put our money where their mouths are—in the democratic election process they keep saying they support, a process the people of Nicaragua so clearly deserve.

□ 1740

TRIBUTE TO ALONZO A. SWANN

(Mr. VISCLOSKY asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. VISCLOSKY. Mr. Speaker, I rise today to pay tribute and seek due recognition for World War II veteran Alonzo A. Swann, a great American hero.

During World War II, Alonzo Swann was a steward's mate assigned to man gun tub 10 as a crewmember of the U.S.S. *Intrepid.* On October 29, 1944, while patroling off the Philippine Islands, the *Intrepid* was engaged by some of the first Japanese kamikaze planes. As the battle of Luzon raged on, a plane, bent on destruction, hurled at the *Intrepid*'s flight deck in a kamikaze attempt. Alonzo Swann and the other steward's mates of gun tub 10 tried furiously to bring the plane down. Alonzo Swann continued to fire at the plane until it collided with the *Intrepid.*

The actions, above and beyond the call of duty, of Alonzo Swann and the other crewmembers of gun tub 10 were not in vain. Their relentless firing inflicted such great damage on the kamikaze plane that it was unable to maintain its course and instead it crashed directly into gun tub 10, sparing the *Intrepid* from fatal damage but causing fatal and serious injuries to the members of gun tub 10.

It was freely acknowledged that of all of the gun batteries that fired upon the Japanese plane, only the crew of gun tub 10 remained at their station, until the plane was brought down. All others, succumbing to the natural instinct for self-preservation, discontinued firing and sought the protection of the splinter shields—all save the stewards and steward's mates of gun tub 10.

For this act of bravery, which Assistant Chaplin Donald Ickes said was unequaled by any of the other considerable acts of heroism he had witnessed, the members of gun tub 10 were awarded the highest naval honor possible, the Navy Cross. For unknown reasons, this award was later downgraded to the bronze star.

Alonzo Swann, placed in a dire situation that most Americans will never know, answered his Nation's call of duty above the human instinct for self-preservation. By remaining at his station and risking his life when

others sought cover, he saved lives and protected his ship from crippling damage.

Alonzo Swann's first petition to be duly recognized for his bravery fell on the Navy's deaf ears. He is not satisfied, I am not satisfied, and the people of the United States of America should not be satisfied. The Navy has informed me that they have reopened Mr. Swann's case. I thank the Navy and strongly urge them to give him his long sought, just reward. Award Alonzo A. Swann the Navy Cross.

H.R. 3686, FAIR HOUSING ACT AMENDMENT

(Mr. PACKARD asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. PACKARD. Mr. Speaker, before we recessed for the December break I introduced legislation which will stop discriminatory housing practices against senior citizens.

My legislation, H.R. 3686, eliminates a vague provision of the Fair Housing Act, which has placed a burdensome requirement on landlords of senior housing.

Under the law, a senior park can be declared a family park if it does not offer the proper amenities. Rather than face the possibility of a lawsuit, many landlords of senior parks have decided to open their projects to families.

My legislation would eliminate this requirement for such amenities, giving landlords and senior citizens a clearer idea of what exactly is required.

The bill does keep in place safeguards against discrimination by requiring senior housing to demonstrate an intention to be a seniors housing project by having 80 percent of the dwelling units occupied by one person over the age of 55.

I do not believe that it is fair to senior citizens to expect them to live in this state of limbo. By eliminating this provision the law will be clarified and landlords will be able to easily determine if they meet the regulations without having to go to court.

I urge my colleagues to support H.R. 3683, and stop discrimination against senior housing.

LEVERAGED BUYOUTS LEAVE DEDICATED COMPANY EMPLOYEES WITHOUT JOBS OR INCOME

(Mr. DARDEN asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. DARDEN. Mr. Speaker, yesterday, I spoke of my alarm about the result of many leveraged buyouts during the last decade. Today, I want to specifically mention one of these transactions.

Rich's, one of Atlanta's true retail institutions, finds itself owned by a holding company controlled by a corporate raider named Campeau who has filed for bankruptcy protection. Rich's is a profitmaking business and its employees work hard every day to provide quality goods and services to the general public. While Rich's has remained profitable, the parent company has an overlay of debt which cannot be overcome.

What is especially tragic is that our Tax Code provides an incentive for companies to go further into debt and discourages the accumulation of equity. Those who work should reap the rewards. However, leveraged buyouts leave dedicated company employees without jobs or income because corporate raiders have co-opted the company's assets for immediate personal profit.

We cannot continue to mortgage our future through corporate debt subsidized by the taxpayers.

LATIN AMERICA IS OUR NATURAL ECONOMIC AND COMMERCIAL TRADING PARTNER

(Mr. DONALD E. "BUZ" LUKENS asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. DONALD E. "BUZ" LUKENS. Mr. Speaker, freedom is bursting out all over the world. It is a marvelous sight to behold. We watched Central America, East Europe, Lebanon, South Africa, where progress is being made. But we need to remember our natural neighbors, Latin America. It is a historic alliance. It is politically right, it is morally correct, and they make a natural economic trading and commercial partner.

Everyone looks to 1992 in Europe, the little dragons of Asia and our troubled Middle East. But with our growing Spanish-speaking population in the United States, we need to remember to come home and have a vision, to come home and look ahead, to come home and make international progress by taking care of our natural geographic, historic partners, Latin America.

The whole world looks for exploding freedom in Europe; let us not forget our natural neighbors.

TRIBUTE TO MARTHA HICKS

(Mr. BUSTAMANTE asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. BUSTAMANTE. Mr. Speaker, today I rise to recognize a constituent of mine, Martha Schultz Hicks, of San Antonio, TX. In November of 1989, Martha was presented the distinguished honor of being named "American Business Woman of the Year" by the American Business Women's Association [ABWA].

Each year the ABWA recognizes one of its member's professional achievements and community involvement and presents them with its highest award. I am not surprised that 1989's recipient was Martha.

I have known Martha since I was a county judge in San Antonio, Bexar County, and she has always been a leader in the community. Her unrelenting effort to help others has benefited those in San Antonio. Martha's devotion to education and her personal involvement in teaching others to achieve their goals has truly benefited the business community there.

So, today I would just like to say, "Congratulations and thank you Martha, for all you have achieved for yourself and for San Antonio."

REPLACING THE BERLIN WALL WITH A METAL FENCE

(Mrs. BENTLEY asked and was given permission to address the House for 1 minute and to revise and extend her remarks.)

Mrs. BENTLEY. Mr. Speaker, in a speech to members of East Germany's Volkskammer—or People's Parliament—in early January, Acting President Wolfgang Grlach, announced his intention to complete the dismantling of the wall. If you read the transcript of the speech you also learned of the intention to replace the soon-to-be downed wall, with a metal fence of some sort.

I was very interested to see that news reports of Mr. Grlach's speech did not contain any reference to the metal fence proposal. Perhaps no one wanted to "Jam a stick into the spokes" of what has uinversally been regarded as an extraordinary development—the tearing down of the Berlin Wall. The idea of replacing the wall with a fence was finally mentioned in a caption that accompanied a picture of East German workers removing a large segment of the Berlin Wall, in yesterday's New York Times.

I mention this little story because I am concerned about people who exhibit a dangerous penchant for hearing what they want to hear, they want to hear it. No one doubts the fact that the world is changing by leaps and bounds, and certainly we all want the seeds of democracy to flourish in East Germany, Poland, and Lithuania. However, events could very easily spin out of control. When and where, we don't know—nor does the Soviet leadership. In the meantime, let's not forget that approximately 560,000 Soviet troops still have their heels dug into East European soil.

INTRODUCTION OF CONCURRENT RESOLUTION—MOST-FAVORED-NATION TRADING STATUS FOR ROMANIA

(Mr. PARRIS asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. PARRIS. Mr. Speaker, I have today introduced a sense-of-the-Congress resolution calling on the President to immediately reextend most-favored-nation trading status to the country of Romania.

On December 17, 1989, the people of Romania, hungering for control over their own destinies, rose up en masse and, echoing events of our own country's establishment, entered into a bloody confrontation with forces of a tyrannical ruler which culminated on December 21 with the people throwing off the yoke of Ceausescu's oppression that had lain so heavy on their shoulders for the past 27 years. In establishing a transitional government, the people of Romania have set about the difficult and arduous task of righting the social, political, and economic wrongs inflicted upon them by the despotic Ceausescu regime. The task is not an easy one. The standard of living in Romania brought about by Ceausescu's policies is one of the lowest in Europe. For a fledgling government, struggling to incorporate democratic principles into its governing scheme and to survive and grow, its economic house must be put in order quickly, with an infusion of tangible capital and goods. However, for the economic impact of that assistance to be effective it must be based upon trade which creates jobs that are long lasting, rather than direct aid, which is fleeting.

Reinstituting the most-favored-nation trading status for Romania is the United States trade incentive best suited to meet these goals. That action, in my view, meets the goals of this fledgling government.

MFN has proven in the past to be a mutually beneficial trading instrument between the United States and Romania as well as an instrument to effectuate social and political change in Romania—however minimal it might previously have been.

In 1975, Romania was granted most-favored-nation trading status as a way of rewarding and promoting its demonstrated political independence from the Soviet Union. Since the mid-1960's, Romania has sought to institute external policies which are consistent with its own view of its national interests. For example, Romania:

Condemned the invasion of Czechoslovakia;

Criticized the invasions of Afghanistan and Kampuchea;

Was the only Warsaw Pact country to recognize Israel;

Refused to endorse anti-U.S. name calling resolutions in the United Nations;

Insisted upon having relationships independent of U.S.S.R. with China, West Germany, Israel, and the United States;

Did not participate in Warsaw Pact troop maneuvers outside its borders;

Resisted Soviet efforts to integrate the East European and Soviet economies;

Was the only Warsaw Pact country to conduct more than 50 percent of its trade with the non-Communist world.

Following the extension of MFN status to Romania, trade between that country and the United States expanded fourfold from $450 million in 1975 to $1.2 billion in 1985, before declining in later years due to the economic policies of the Ceausescu regime. Leading U.S. exports were agricultural products, including corn and soybeans, coal, power generating equipment, fertilizer, animal skins, and pulp waste. Topping the imports from Romania were petroleum products, clothing, iron and steel products, footwear, and furniture. It is estimated that at its height, trade with Romania generated some 12,000 jobs within the United States.

The two governments constructed a framework conducive to the expansion of trade and economic cooperation. In addition to granting MFN in 1975, the United States supported the expansion of American exports to Romania by determining Romania's eligibility for United States export financing programs. Romania has utilized Eximbank lending programs and Commodity Credit Corporation [CCC] credits, aggregating over $1 billion in U.S. Government-backed credits since 1975 (about $800 million through the CCC and $200 million through the Eximbank). Beginning in 1976, Romania also enjoyed special tariff preferences under the Generalized System of Preferences [GSP] Program which the United States extends to developing countries. Under the GSP Program, over $700 million in goods from Romania entered the United States between 1976 and 1987, at which point Romania was stripped of its GSP privileges.

Under the MFN, 30 United States firms set up sales offices in Romania. For instance, Control Data Corp. entered into a joint venture to manufacture computer peripherals for sale in Romania, Eastern Europe and the West.

However economic conditions for Romania began to go sour in 1981, brought about by past economic mismanagement, the international credit squeeze, the adjustment of the economy to slower growth, and a restructuring of the world oil and refined petroleum products market, which made a large segment of Romania's exports industry unprofitable. Faced with enormous internal economic difficulties and a rising foreign debt the nation launched an enormous austerity drive. Because of these factors and Ceausescu's drive to eliminate Romania's external debt, imports were cutback drastically and personal consumption for the general public was cut to a bare minimum.

The cost to Romanians was tremendous, as living standards fell abysmally, particularly in the availability of food and energy. A refusal to contemplate economic reforms and excessively severe financial austerity measures drove living standards to their lowest level since the mid-1950's. Bucharest was the darkest and coldest capital city in Europe. This further erosion of the standard of living added to the growing public unrest which had been fueled by the repressive social measures instituted by the Ceausescu regime.

Long known for its human rights violations, the Ceausescu regime received increasing attention for its repression of religious liberties, freedom of speech, free emigration and other such deplorable acts against the human spirit and body.

The extension of MFN has proven to be an effective tool for social reforms within Romania.

The granting of MFN status to Romania was conditioned upon its compliance with provisions of the 1974 Trade Act, known as the Jackson-Vanik amendment. These provisions, entitled "Freedom of Emigration in East-West Trade," which principally make nonmarket economy countries ineligible for nondiscriminatory tariff treatment upon a determination that "such country denies its citizens the right or opportunity to emigrate."

Because of its economic importance to Romania, the potential for loss of MFN status due to a failure to comply with Jackson-Vanik had proven an important bargaining tool in United States dealings with Romania on its emigration and other human rights policies. Under this MFN leverage there had been a distinct improvement in Romanian emigration performance. The 1974 Jackson-Vanik amendment links extension of MFN with performance in the area of freedom of emigration. As a matter of fact, the leverage afforded by annual review has been effective in producing a rate of emigration from Romania comparable to that of all the other Warsaw Pact countries combined, excluding East Germany. The average emigration rate from Romania to the United States, Israel, and West Germany nearly tripled in the decade following the extension of MFN, including a sevenfold increase in emigration to the United States. Over 154,000 Romanians—roughly 1 in 160 of the country's current population—have departed the country legally

since MFN was granted. Moreover, under MFN leverage, procedures for emigration have been eased and some of the hardships encountered by individuals applying for immigration, such as harassment by the secret police, loss of employment, loss of housing, and the denial of access to social services had been alleviated.

Annual MFN review had helped the United States highlight individual human rights cases, and in some instances resolved them in a positive manner. However these instances were few and slow in being completed.

Congress, growing ever critical of the repressive Ceausescu regime and the deliberate lack of progress in its movement toward human rights reforms, sought to impose further stringent human rights conditions in its granting of a Jackson-Vanik waiver for an extension of MFN to Romania in 1988. Unwilling to accept the prospect of further conditions being imposed on his government, Ceausescu unilaterally withdrew his country's participation in the extension of MFN by the United States. Specifically, Ceausescu sought to avoid the imposition of further conditions by the United States that his government effect meaningful democratic reforms within Romania.

Finally, in December 1989, the Romanian people, faced with a bleak existence at best, and hounded by Ceausescu's police squads, deprived of the most basic human rights, and forced to exist on an inhuman standard of living, decided they had had enough and moved to take their destiny into their own hands, and like our Founding Fathers some 200 years ago, rose up and overthrew the despotic and repressive regime. We all watched this on television with wonder, as history unfolded before our eyes.

Since the overthrow of Ceausescu, the transitional government has struggled valiantly to overcome the problems stemming from the creation of a new government, right the social wrongs of the past regime, and foster an economic climate that will provide an improved standard of living for its downtrodden people. It has been, and will continue to be, a very difficult task indeed.

I am reminded of the creation of America's democracy, when at our darkest hour we sent three emissaries—among them Benjamin Franklin, to a political and economic giant of the times seeking support in our efforts toward freedom and self-determination. With the swipe of a pen, France, legitimized and recognized the fledgling government that was to become the United States of America. France's signing of the Economic Treaty of 1778 provided our country with the economic means to continue our struggle with Great Britain, was the first economic recognition of our country, and provided our forefathers with a critical opportunity to further establish the internal foundation upon which our democracy would be built. In other words, France provided crucial support toward the success of our young government in providing what would today be referred to as an extension by France of most-favored-nation trading status to the United States.

We stand at a very critical juncture in time, faced with an opportunity that is not dissimilar to the situation facing France in 1788. We have the opportunity to extend our hand to a fledgling government and offer nation-sustaining aid and assistance in considering the reextension of U.S. MFN trade status to a people that have beaten overwhelming odds in successfully throwing off the yoke of tyranny.

After ejecting the Ceausescu regime from power, the interim government has already extended full religious freedoms and the freedom of speech to the people of Romania, and has further stated its strong desire to right the wrongs of the former regime. No less important from our perspective is the fact that the interim government has announced its clear intention to hold free and open elections on May 20, 1990, this year.

For practical purposes, there are two criteria which must be met prior to the extension of MFN to any country.

First, the United States must have a valid trade agreement with the candidate country. In the case of Romania, a bilateral trade agreement was entered into in 1975, and will not expire until August of this year.

Second, the candidate country must be in compliance with the Jackson-Vanik free emigration provisions of the Trade Act of 1974. Again, in the case of Romania, and as I have already stated, there now exists within Romania de facto free emigration. Moreover, the interim government has announced its intention to provide for free emigration by law.

We have before us an opportunity to extend a hand of friendship and support to the people of Romania in their struggle for freedom and self-determination. This gesture of good faith and acknowledgment of legitimacy by the leading power of the free world would send a powerful message to the people of Romania. It would tell the Romanians that Americans support them in their struggle, that we trust their commitment to the cause at hand, and that they have a friend in the West. It also sends a similarly important message to the thousands of individuals and corporations in the United States and throughout the free world whose capital investment in Romania will provide the economic foundation upon which their new government will be built. That message is clearly stated in the resolved clause of the resolution introduced today which reads:

Resolved by the House of Representatives (the Senate concurring), That it is the sense of the Congress that the President should move immediately to provide for the extension of Most Favored Nation trading status, and seek to offer other such means of indirect economic assistance to Romania as an expression of confidence in the Romanian people and their new government, and to reward, promote, aid and assist the Romanian people in their struggle for independence and freedom.

I would urge my colleagues to join me in cosponsoring this important resolution, and in moving it quickly to the floor.

□ 1750

APPLY PRESSURE TO HAITIAN DICTATORS

The SPEAKER pro tempore (Mr. DARDEN). Under a previous order of the House, the gentleman from New York [Mr. OWENS] is recognized for 5 minutes.

Mr. OWENS of New York. Mr. Speaker, I rise to speak about my concern for the double standard of the U.S. foreign policy, especially when it is applied in the Western Hemisphere. Specifically, I am concerned about the overreaction in Panama and the lack of action in the case of Haiti.

The invasion of Panama was illegal, brutal, and unnecessary. A great nation like the United States should never sink to the barbaric level of a thug like Manuel Noriega. A superpower should never allow itself to be goaded into a state of macho hysteria by a petty tyrant who is also a maniac. Innocent Panamanians and United States soldiers should not have had to die to accomplish a task which more patience and creative pressure could have accomplished.

They are going to make a deal, Mr. Speaker. They are going to make a deal anyhow. Manuel Noriega's trial will never go to its end. The monster deal makers, Mr. Noriega, the DA, and the CIA, the Justice Department, will now sit down and make a deal. The invasion of Panama failed. They brought Noriega out alive. They wanted him dead. Noriega alive is an embarrassment to the United States. They will now sit down and make a deal. Noriega's trial will result in the kind of deal that could have been made without all the killing and the unnecessary dying.

Too many civilians in Panama died because the monster deal makers could not make the deal in advance, and many in the communities, and the people in Panama that suffered the most devastation from the invasion were poor people and black people. The whole question of race in Panama has never been discussed at all in this

situation, and it is important that it be looked at. I represent the largest community of Panamanians outside of Florida. They are all glad to see Noriega go. They are all mourning the human and material losses experienced, but most of my constituents are black Panamanians, and they are worried about their civil rights and their human rights, worried about a return to the kind of oppression that existed against black people before Noriega.

Noriega, like many other tyrants, was clever enough to see that the oppressed people are the ones that he could win over and make loyal to him, so he did a great deal for the black people of Panama. They still are glad to see Noriega go. The problem is now they need relief. They need government aid. They need private aid. They need long-term assistance in terms of building the country on a whole, but certainly those communities that suffered most need assistance from the government and the people who are generous enough to know that a large amount of devastation took place. Food is needed immediately. Clothing is needed immediately. Most of all, some recognition of the long-term obligation that the United States has to Panama that is needed.

There were black people who built the Panama Canal who have never been compensated fully for their contribution. They are worried about the United States invasion of Grenada, and the fact that Grenada in 1983 when invaded was in much better shape economically. Grenada is now a basket case. On the other hand, they are worried about the fact there will be a total lack of recognition of their dilemma. All of our attention will be focused on Eastern Europe, on El Salvador, on places where we have special interests, but are not concerned about democracy, necessarily. We are more concerned about democracy in Eastern Europe than in our own hemisphere, right here in Haiti.

Haiti is a situation where the United States has a tremendous amount of influence. Consistently, this administration has taken a soft approach on Haiti. We are again faced in Haiti with another escalation of the lack of freedom. Another election was scheduled, so it prompted the present dictators of Haiti to start a new reign of terror. They have expelled the man who wrote the constitution for that new election, Prosper Avril, now coddled by the U.S. Government because they do not speak against him. Money has been covertly sneaked to the Haitians. They are surviving.

The administration would not survive for 6 months if the United States would take a hostile attitude toward the terror there. The United States has more power and influence over political and human rights abuse in Haiti than it has in any other nation. The present administration's dictators there could not exist if we do not want them to exist. We should show the Haitian military regime with the new reign of terror that the U.S. Government means business about democracy all over the world, and democracy in this hemisphere, and cut off all aid to Haiti, even humanitarian aid. The government is able to survive upon any money we send to Haiti, and takes advantage of food sent to children. This is a government with no scruples and no morality, a government which is preparing another crisis for the United States in its war against drugs.

Drug runners are using Haiti. Haiti is a major drop-off point, still. In order to finance a military action, where they cannot get money from the United States, they turn to the drug runners. If we mean business about fighting drugs, we do not need to invade Haiti. We can just apply pressure. In 6 months that pressure, if applied through the right channels, would bring down the oppressive government of Haiti.

Our double standard is such that we ignore what is happening on this island, which is just 90 miles off the shore of the United States. Is it a double standard because of race? Is it a double standard because they have no Communist party? We just ignore the human rights there. There are 5 million people there, and I hope we end the double standard. In addition to providing the kind of aid and assistance for Panama, it deserves to have pressure on Haiti. Bring down the government of Haiti and allow human rights to flourish there, and real democracy to take place in Haiti.

PRESIDENTIAL SCIENCE ADVISER'S ROLE IN EDUCATION

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from Texas [Mr. BUSTAMANTE] is recognized for 5 minutes.

Mr. BUSTAMANTE. Mr. Speaker, yesterday I introduced legislation which directs the President's Science Adviser to take the lead in coordinating Federal policy to improve math and science education in this country.

The need for such legislation is apparent given our Nation's projected "shortfall of 560,000 scientists and engineers by the year 2010." This shortfall is aggravated by the underrepresentation of minorities, the handicapped, and women in science, all of whom will constitute, in the aggregate, 85 percent of the work force by the year 2000. [Washington Post, Jan. 9, 1990, p. A17]

What we have, therefore, is a two-prong problem: On the one hand, we currently don't have enough scientists and engineers for research and development purposes; and on the other hand, the future pool of working-age Americans who could possibly fill that gap have been traditionally underrepresented in those fields. To ensure our Nation's economic competitiveness, it is incumbent upon us as legislators to find ways of increasing the representation of women and minorities in science and engineering. This point is eloquently made by National Science Director Erich Bloch who has stated publicly that:

> The large numbers of minorities and women in the country provide an opportunity—one we cannot afford to miss. Our motive should be pragmatism as much as altruism—the need to develop all our human resources.

My own recognition of the relation of minority education initiatives to our Nation's economic security is what prompted me to introduce, on March 22 of last year, H.R. 1561, The Hispanic-Serving Institutions of Higher Education Act of 1989. My distinguished colleague and senior Senator from Texas, Finance Chairman LLOYD BENTSEN introduced the companion bill, S. 1669, on September 22 of last year. Senator BENTSEN and I introudced this legislation because we believe that in this age of constant technological advances and increasing global competition, our educational system is faced with a tremendous challenge that the Congress must help that system to meet. That's one of the reasons why I included a provision in H.R. 1561 which would authorize postsecondary institutions to increase the representation of Hispanic-Americans in math, science, and engineering, for although "Hispanics comprise 9 percent of the population * * * only 2 percent of all employed scientists and engineers" are Hispanic.

In fact, increasing representation of Hispanic-Americans in these fields was one of the specific strategies outlined in a Federal report entitled—"Changing America: The New Face of Science and Engineering."

That was the title of the final report of the task force on women, minorities, and the handicapped in science and technology, which was statutorily established during the 99th Congress for the purpose of issuing recommendations on how to shore up our scarcity of workers with scientific expertise.

The same task force recommended that the Federal Government take the lead in launching programs to help the American education system to improve math and science instruction:

> The Federal Government is the largest single employer of scientists and engineers. It finances one-half of all research and development performed in the United States. It has a special responsibility to be a pacesetter.

By taking the lead in math and science promotion, the Federal Government would be indirectly encouraging private industry and State and local government to do the same. Some of

the programs envisioned under this initiative is the loaning of Federal scientists to teach at elementary and secondary schools under alternative teacher certification plans as well as the offering of job cooperatives with Federal entities engaged in scientific research. The Department of Energy and NASA are among some of the more prominent Federal Department and agencies which are currently engaged in developing such programs.

While all of these initiatives are promising and exciting, there is one major flow that afflicts them all: Not enough Federal policy coordination.

The need to make Federal policy on math and science education a high priority is clearly underscored in the task force's report. Accordingly to the task force, Federal policy in these educational areas should be made and coordinated at the Presidential level due to the President's "broad, strong, and immediate" influence. This is the principal reason why the task force specifically requested that the President:

Direct the White House Office of Science and Technology Policy to establish a Federal coordination committee for science, engineering and technology to provide visibility, coordination, and accountability for Federal agency plans to strengthen the science and engineering work force.

I believe this recommendation is probably one of the most important made by the task force, because it touches on a crucial point: The need for better coordination between the various Federal departments and agencies in promoting science education.

This is precisely the rationale for my legislation, which focuses visibility on math and science by statutorily authorizing the President's Science Adviser to act as the chief coordinator of Federal efforts to enhance math and science education at all levels.

Under this authorization, the President's Science Adviser would not only be able to establish a coordination committee as requested by the task force, but his office would be permanently charged with the task of promoting math and science education. Making this a permanent charge of the Science Adviser, and clearly outlining what that charge entails, is crucial to ensuring that our Nation has the necessary manpower resources to maintain its economic competitiveness beyond this new decade and into the 21st century.

I urge my colleagues to support this important legislation. For those Members interested in this legislation, I submit a copy of my bill for the RECORD.

H.R. 3853

A bill requiring the Office of Science and Technology Policy to coordinate and evaluate Federal efforts to promote and assist mathematics and science education

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled,

SECTION 1. POLICY PLANNING; ANALYSIS; ADVICE

Section 205 (a) of the Presidential Science and Technology Advisory Organization Act of 1976 (42 U.S.C. 6614(a)) is amended—

(1) by striking "and" at the end of paragraph (12);

(2) by redesignating paragraph (13) as paragraph (14); and

(3) by inserting after paragraph (12) the following new paragraph:

"(13) coordinate Federal policy designed to improve the instruction of mathematics and science at the elementary, secondary, and postsecondary levels, and assess how the various Federal departments and agencies can assist and encourage American students to pursue postsecondary study in mathematics, science, engineering, and other technology-related disciplines which may be of vital importance in enhancing our Nation's economic competitiveness; and".

SEC. 2. SCIENCE AND TECHNOLOGY REPORT AND OUTLOOK.

Section 206(a) of the Presidential Science and Technology Advisory Organization Act of 1976 (42 U.S.C. 6615(a)) is amended—

(1) by striking "and" at the end of paragraph (5);

(2) by striking the period at the end of paragraph (6) and inserting in lieu thereof "; and"; and

(3) by adding at the end of the following new paragraph:

"(7) an evaluation of Federal efforts to enhance mathematics and science education, including an assessment of the effectiveness of Federal programs designed to assist in increasing our Nation's manpower resources in mathematics, science, engineering, and other technology-related disciplines.".

LEGISLATION TO EXTEND DUTY SUSPENSION ON CERTAIN TEXTILE EQUIPMENT

The SPEAKER pro tempore (Mr. DARDEN). Under a previous order of the House, the gentleman from North Carolina [Mr. BALLENGER] is recognized for 5 minutes.

Mr. BALLENGER. Mr. Speaker, today I am introducing legislation to extend for a period of 5 years the existing duty suspension on heatset stretch texturing textile equipment.

My district is home to more than 40,000 textile employees with 20,000 employed in one county alone—Gaston County. I cannnot stress how important textiles are to the economic well-being of rural North Carolina.

The yarn spinners industry is an integral segment of this larger textile family on whose behalf I have introduced this legislation. The machinery in question is designed for heatset, stretch texturing of continuous manmade fibers. The textured yarns are major components in various kinds of apparel and home furnishings.

As required of all duty suspension bills, there are no domestic producers of the texturing equipment. In fact, the last domestic supplier of this machinery ceased production in 1973.

Today, the senior Senator from North Carolina, Senator JESSE HELMS, is introducing identical legislation in the Senate. I am proud to associate myself with all segments of the textile industry and urge my colleagues on the Trade Subcommittee to consider this bill for inclusion in the miscellaneous tariff and trade legislation.

THE EXIMBANK ESTABLISHES A LOAN LOSS RESERVE

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from Wisconsin [Mr. KLECZKA] is recognized for 5 minutes.

Mr. KLECZKA. Mr. Speaker, after many years of unflattering reports from the General Accounting Office [GAO] and repeated calls to action, the Export-Import Bank of the United States [Eximbank] announced on January 4 the creation of $4.8 billion reserve to cover possible losses on 40 percent of its outstanding loans and guarantees. As the author of similar legislation (H.R. 3608) during the 100th Congress, I am delighted by the Eximbank's decision to establish the reserve. The loan loss requirement retroactively took effect to September 30, 1989.

Eximbank's refusal to account for loan losses hampered the ability of this key Federal export agency to operate vigorously. Without real-world accounting, Eximbank loan and guarantee losses would likely esclate, and restrict the U.S. role in present and future foreign development. Establishing a loan loss reserve is crucial for this reason—and especially important in light of a 1987 GAO report stating that discounted Eximbank loan sales may result in substantial losses for the agency in the years in which they are sold. At least now the impact of any Eximbank loan sales will be minimal, since the losses are already recognized in the reserve. Hopefully, this action will also boost the long-term financial condition of the Eximbank. As before, the Eximbank will continue to borrow funds from the Federal Financing Bank for new loans and expand its activities during this period of expansion in the world economy.

As a close observer of the Eximbank, I do not believe its best interests were served by previous annual fiscal reports which gave overly rosy but inaccurate assessments of its condition. While the new governments of Eastern Europe are looking to America for help in restructuring their economies, for instance, Congress simply cannot afford to make decisions about the Eximbank based on misleading information. Reporting the Eximbank loan loss reserve will clearly also help Congress ensure that the American people are getting their money's worth by clarifying their cost in financing export sales.

Legislation passed in the first session of the Congress, the "International Development and Finance Act" (Public Law 101-240), requires the Eximbank to submit a report on why it has persisted in not establishing a loan loss reserve. I am extremely pleased that the Eximbank Board and Chairman went one step further and created the actual reserve. After years of stonewalling by the Eximbank on this matter, new Chairman John Macomber deserves praise for his leadership in improving the fair representation of its financial status.

As a strong supporter of the Eximbank and its mission, I am confident that its adoption of real-world bookkeeping at this crucial juncture will help dissuade critics and opponents during upcoming debates on funding for its export assistance programs.

AN EXHILARATING, FASCINATING, CHALLENGING DECADE

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from Illinois [Mr. PORTER] is recognized for 5 minutes.

Mr. PORTER. Mr. Speaker, 10 years ago today, on January 24, 1980, I was sworn in as a Member of this great body, the first member to be elected in the new decade of the eighties.

It has been an exhilarating, fascinating, challenging ten years, filled with joy and accomplishment, as well as with struggle and frustration.

I have had the support of a wonderful staff—the best of any Member of Congress—both at home and here in Washington. They do me and our country proud every day, and to me, represent the face of the committed, dedicated people of Government that all our citizens ought to have the chance to see.

I have had the support of my partner, the light of my life, my wife, Kathryn, who not only headed my staff during the early years, but has provided inspiration, ideas, and leadership every day of the decade.

I thank the wonderful people whom I am privileged to represent and my country for the opportunity to serve in this magnificent hall of human freedom. I hope that they will see fit to allow me to continue to do so.

UKRAINIAN INDEPENDENCE DAY

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from Illinois [Mr. ANNUNZIO] is recognized for 5 minutes.

Mr. ANNUNZIO. Mr. Speaker, I rise to call to the attention of my colleagues in the House of Representatives that January 22 marked the 72d anniversary of Ukrainian independence. On January 22, 1918, independence from Russian domination was proudly proclaimed in Kiev, the capital of Ukraine, by the Ukrainian Central Rada, the parliament of the people of Ukraine, and 1 year later, the Act of Union joined western and eastern Ukraine into one Ukrainian National Republic.

During the 3 years which followed this declaration of independence, the industrious Ukrainian people made tremendous progress toward developing a stable and democratic government, despite constant pressure at the hands of the Bolsheviks. Unfortunately, however, by 1922, the Bolsheviks took control, and the Ukrainians entered a dark period of oppression and persecution.

During the barbaric years of Stalin's rule, the Ukrainians witnessed mass starvations, evacuations, and deportations, as the Soviets attempted to destroy the national identity of the Ukrainian people. However, the Soviets were not able to crush their spirit and their great desire to achieve independence and self-determination.

Today a wave of freedom is sweeping over all of the republics which have long been under the domination of Soviet rule. Millions of Ukrainians who have fought to preserve their cultural and religious heritage are bravely rising up to demand that their country may once again join the community of free nations.

The Popular Movement of Ukraine for Perebudova, an organization founded only a few months ago, now boasts hundreds of thousands of members dedicated to the cause of freedom. In an inspiring display of unity to commemorate Ukrainian Independence Day, on Sunday more than 100,000 people formed a human chain stretching 300 miles from the Ukrainian capital of Kiev, westward to the Ukrainian city of Lvov.

A few months ago, the Library of Congress sponsored an exhibit to commemorate the 175th anniversary of the birth of the great Ukrainian national poet, Taras Shevchenko. I visited this exhibit, and as chairman of the Joint Committee on the Library, I was delighted that the Library appropriately highlighted the magnificent writings of this truly outstanding Ukrainian author, choosing from its collection of more than 70,000 Ukrainian books which preserve the rich cultural, religious, social, economic, and national history of the Ukrainian people.

Mr. Speaker, on this 72d anniversary of Ukraine's proclamation of independence, I am proud to join with Americans of Ukrainian descent in the 11th Congressional District of Illinois, which I am honored to represent, and Ukrainian-Americans throughout the United States, in commemorating this stirring event in the history of free nations.

We in Congress must continue to press the Soviets at every opportunity to restore freedom for the downtrodden, and as a Member of Congress, I remain committed to devote my efforts tirelessly until the Ukraine is a democratic nation, free from the tyranny, and domination of the Communists.

INTRODUCTION OF MEDICARE BENEFIT IMPROVEMENTS ACT OF 1990 BY 53 HOUSE MEMBERS

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from California [Mr. STARK] is recognized for 5 minutes.

Mr. STARK. Mr. Speaker, I rise to introduce the Medicare Benefit Improvements Act of 1990. I am pleased that my distinguished colleagues, Mr. GRADISON, Mr. WAXMAN, and Mr. MADIGAN and an additional 49 original cosponsors have joined together to introduce this important new bill.

The Medicare Benefit Improvements Act would provide a modest yet essential expansion of Medicare benefits. The bill would improve the Medicare benefit package to cover and expand four services: mammography, home health care screening, respite, and hospice.

Over the course of the past several years, there have been numerous congressional hearings and studies that confirm the value of these benefits. As a direct result, the benefits were included in the Medicare Catastrophic Coverage Act of 1988. Unfortunately, when Congress repealed the act, these benefits were also eliminated.

The bill would cover mammography screening for elderly and disabled Medicare beneficiaries. The clinical benefits of mammography screening have been confirmed by the scientific community. This preventive service is projected to save 4,000 lives per year.

Under the provisions of the proposed legislation, women ages 65 and older would be eligible for biennial mammography screening. Disabled beneficiaries would be eligible for a baseline screening with subsequent annual screenings for high-risk disabled beneficiaries between the ages of 40 and 49, and all disabled women between ages 50 and 64.

The bill would also expand the Medicare home health benefit to cover daily services for up to 38 days. This benefit is particularly important to frail, elderly Medicare beneficiaries, many of whom need home health services to recover from illness, regain strength, and improve their functional abilities, often following a hospital episode.

In-home respite services would also be provided by the proposed legislation. Caregivers of chronically dependent, homebound Medicare beneficiaries would be allowed up to 80 hours per year of respite. This benefit is essential to caregivers whose efforts make it possible for severely impaired beneficiaries to remain in their homes and avoid institutionalization.

Finally, the Medicare hospice benefit would be improved by eliminating the 210-day lifetime limit for Medicare covered hospice care.

These new benefits would be fully financed by a modest increase in the part B premium. According to the Congressional Budget Office, the part B premium would increase by approximately 80 cents per month in 1991, increasing to only $1.30 per month 5 years after the program is fully implemented. This modest premium increase would fund the full cost of these new benefits.

Because premiums would be set to fund the full cost of these new benefits, the proposal is financed on a Gramm-Rudman deficit neutral basis.

This proposal is endorsed by a number of national organizations, including The American Cancer Society, the American Association of Retired Persons, the Older Women's League, Families USA, the National Association for Home Care, Hospice Association of American, and the National Alliance of Breast Cancer Organizations.

I urge you to join us as cosponsors of this legislation and push for its swift consideration before the conclusion of the 101st Congress.

AMERICAN OPPORTUNITIES

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from Georgia [Mr. GINGRICH] is recognized for 60 minutes.

Mr. GINGRICH. Mr. Speaker, I want to speak this evening about American opportunities. Last night I talked briefly about the concept of an American opportunities workshop on May 19. This is the idea of having a 90-minute program by satellite television available to anyone in America, either through their local cable programs or because they were able to get access to a dish receiver or to a hotel

that has a down link or to a school or to a church.

I talked about the concept of having 90 minutes by which by television we would outline a new way of thinking about solving problems, a new way of looking at American opportunities, and a new way of developing answers for America's future, of focusing on the concept of developing 21st century citizenship by focusing on new solutions for the nineties; and the idea that anyone could participate that could develop their own site and they could be involved. I thought that I might explain why we decided we could develop an American opportunities workshop, and why we think that is an important idea.

We started with a concept that Thomas Kuhn, in a book called The Structure of Scientific Revolution, first made popular. Kuhn argued that science could be thought of as a series of very big ideas, what he called paradigms, and a paradigm was a way of thinking about something.

Sir Isaac Newton, in thinking about the concept of gravity had developed a new paradigm, a new way of approaching things, which then solved a lot of problems for scientists and for physicists.

Then shortly after Sir Isaac Newton—not so shortly by politicians' time but shortly by a historian's time—people like Max Planck and Albert Einstein came along, and they developed the concept of relativity and of quantum mechanics. And that again became a new model, a new way of thinking about physics.

What Thomas Kuhn discovered was that by focusing on these basic changes we saw a big change in science. Recently we saw, for example, the concept of shift in geology in the late fifties, with the development of the idea of plate tectonics, the fact that the continents actually move.

□ 1810

Mr. Speaker, everybody today agrees that they move very slowly and over a very long period of time, but everybody agrees that the continents moved over the last several billion years and that that is part of what explains, for example, the Himalaya and Mount Everest, is the coming together of two of these plates. So, the concept of paradigm is the concept of a big idea.

Mr. Speaker, most politicians and most of the news does not deal with big ideas. It deals with a series of small, day-to-day events; small, day-to-day activities which occur within a large concept, a larger construct.

In the 19th century a big idea came along, what was called the national insurance state, in Germany. Bismarck, the German political leader, first developed it, and the idea was that people could be taxed to organize a bureaucracy and that the bureaucracy would provide insurance, and health care and other activities better than the private market. At its peak in the United States under Franklin Delano Roosevelt in the New Deal, and then ultimately under Lyndon Johnson in the Great Society, the concept of what became in the modern world the bureaucratic welfare state was a powerful model, was a way of saying, "We'll take some money from everybody in the form of taxes, we'll organize them together in a bureaucracy, and we'll return for your money services which will be better than you could have bought had you done it in the private market."

Mr. Speaker, it was a very popular idea, and it seemed to work for a long time. However, that paradigm, or model of the bureaucratic welfare state, when combined in the late sixties with the values of the left, created a pattern which simply failed. It turned out that the Great Society in its modern form did not work, that that bureaucracy became more and more bound in red tape, more and more bound up in work rules, that it became harder and harder to do positive things and that, in fact, we were faced with a situation in which the average citizen was less and less able to get their needs met, and they were more and more dominated by and controlled by a large bureaucracy which did not care about them.

There is an interesting pattern, if one reads, for example, the Chicago Tribune's brilliant series on education in Chicago. Read about the schoolteacher who said, having had four principals attempt to fire her for being incompetent, never having successfully been fired because the bureaucratic work rules were such that she literally was invulnerable to any of her principals, and, when asked what her educational goal was, she said that it was to retire with a full pension, clearly not what anybody had in mind when they created schools and when they created education and having nothing to do with the well-being of the children.

Mr. Speaker, I was told last night by one New York reporter that to the best of this knowledge in the last 10 years, in all of the eighties, in New York City, because of the work rules, and because of the union contracts, and because of the bureaucracy no principal had been fired in a 10-year period. I cannot vouch for that from firsthand knowledge.

We are asking that the research be done. But it was a stunning concept, and it made sense given the general feeling most people have about how large big city bureaucracy functions.

I was told that only two teachers have been fired for cause, which meant that there were literally people who had been convicted of child molestation who were teaching in schools because it was harder to get them fired, so hard to get them fired, that, in fact, it was easier to simply collapse, and lose will and lose morale.

We see these kinds of examples again and again, whether it is waste in the Pentagon, waste in the Medicare nad Medicaid Program, waste in the New York City bureaucracy. The whole structure of the modern bureaucratic welfare state seems to build in patterns, and habits and activities which, at their best, are extraordinarily wasteful and inefficient, and at their worst they are simply very, very corrupt.

So, I think it is fair to argue that the paradigm of the bureaucratic welfare state and the values of the left have simply failed. This first began to be obvious, ironically, at its very peak under Lyndon Johnson as he founded the Great Society and the first generation of a populist movement. A movement created in large part by William Buckley, by Barry Goldwater, and by Ronald Reagan began to evolve even as the bureaucratic welfare state reached its highest mark. Over the following 25 years it became more and more obvious that raising taxes to hire more bureaucrats to set up more programs to process more paper was simply not working. It was not giving Americans the goods and services they wanted. It was not providing them the future they needed.

And the Presidential election results began to follow that indication. As recently as 3 years after the Great Society began in 1965, in 1968, the left lost an election by a decisive margin, and its candidate got only 42 percent in the general election. By 1972 the left dropped to 38 percent in its vote. In 1976 the left had been so discredited that its nominee could not be found in either party, and, in fact, both candidates for President in 1976 were seen as right of center with Jimmy Carter, ironically, being seen as slightly more conservative on social policy than Gerald Ford, and so the result was that there was not even a leftwing candidate. By 1980 Carter was clearly seen as the candidate of the left, and he dropped to 41 percent. By 1984 Reagan was faced with an opponent who was calling for higher taxes, who was one of the most honorable and legitimate advocates of the modern bureaucratic welfare state, and Walter Mondale was defeated with 41 percent. In 1988 a man who was in some ways attempting to develop a new, more technologically favorable approach, who was trying to be a little different than the traditional liberal Democrat, nonetheless went down to defeat, and Michael Dukakis just got 46 percent, and, as I quoted last night, Dukakis himself has indicated that one of the lessons he has learned out of his years as Governor of Massachusetts is that every basic fundamental achievement

of the eighties has to be rethought in a very basic way, and, coming from Governor Dukakis, that was a very interesting and, I think, very revealing example of the collapse of the old paradigm of the bureaucratic welfare state and of the values of the left.

Now, Mr. Speaker, some people, despite that evidence that it is no longer popular, will still argue intellectually that the bureaucratic welfare state will work, that the values of the left will work if only they can get enough money, if only they can raise taxes on the American people, if only somehow government can receive enough resources. Yet the fact is New York City's budget is approximately $25 billion. Let me repeat that. The city of New York by itself, this New York City budget for government service in New York City, is about $25 billion in government services. That is about 300,000 full-time employees. Now one might argue that at $25 billion a year and 300,000 full-time employees a year that maybe we could have a better run, safer, better educated, healthier, and cleaner New York City. That would argue that the current model does not work, or one could argue that, despite the union work rules, despite the bureaucracy, despite the red tape, if only we had 2, or 3, or 4 billion more, New York City would work, and I think that is going to be one of the major arguments in America in the nineties. Those people who believe that New York City is fundamentally a sound model, that the bureaucratic welfare state essentially works, that the values of the left can, in fact, be applied with effective success, those folks are going to argue, "Let's raise taxes and finance the old order," and I think that is a fair position, and I think that will be the general position of people on the left, but, when realizing that it is not just a question of New York City having $25 billion, all government and America, from local school boards, to county commissioners, to sheriffs, to city government, to State government, to the Federal Government, all governments in 1986 spent $1 trillion 700 billion. That is the government part of the way we run America was $1 trillion 700 billion.

Mr. Speaker, a trillion is a lot of money. A billion used to be a lot of money when I was young, but we are now moving into the age of the trillions. Let me explain how much money a trillion is. A million dollars, if I had up here on this table a thousand million dollars, that would be a billion. That would be a lot of money. A trillion is one million million dollars. So, when we talk about a trillion dollars, we are talking about a million million dollars. So, we are talking at one point seven trillion dollars, which is the spending of all governments in America. We are talking about one million 700 thousand units of a million dollars each, and I would argue that probably that is enough, that probably, if we organize government right, if we did things as efficiently as possible, if we applied values that worked, if we were willing to rethink the bureaucracy and apply modern computers and modern information technology, that probably at a trillion 700 billion dollars we could get a lot done.

□ 1820

But that is real money. We find, in fact, when you start looking at the tale of the eighties that the answers of the traditional left and the answers of the traditional bureaucratic welfare state do not quite work. It turns out, for example, that in the mideighties education expenses went up dramatically. They went up dramatically because of the State and local level people who were raising taxes and spending far more money, and it turns out that there is no direct relationship between the amount of money spent and the amount of learning that took place.

I think it is no accident, for example, that if you look at some of the most expensive school systems in America, New York City, Detroit, Chicago, Washington, DC, they are abject failures. If you look at the school systems of America which have the lowest level of State aid, New Hampshire, it has the highest level of scholastic aptitude test scores. I think in part that is because in New Hampshire they have kept the cost of education at home so that parents and local citizens pay for it, parents and local citizens control it, and parents and local citizens keep an active interest in their schools, whereas when you get to the bigger school systems in the country, they are very heavily bureaucratized. They are very heavily unionized. They have enormously complex work rules and the result is the parent has no sense of power, no sense of involvement and therefore they do not pay much attention to the structure, and the schools fail.

Similarly, health-care costs have gone up throughout the eighties. Now, part of that is because we have somewhat better medicine and higher technology, but the fact is as health care has become more professionalized, more bureaucratic, more filled with red tape, as the Health Care Financing Administration has become more important than the medical doctor and more important than the hospital administrator, the total cost of health care has gone up faster than the quality and quantity of service that is being provided.

I would argue that one of the lessons of the eighties is that it is the core paradigm of the bureaucratic welfare state and the values of the left which have failed.

But in fact, the structure of bureaucracy, the structure of public government which we initially inherited from Bismarck around 1870, is a period, remember, when male clerks pushed quill pens. This is not just precomputer. It is preelectric typewriter and in fact it is pretypewriter.

Modern bureaucracy is a throwback to a world that ceased to exist in America at least 70 or 80 years ago, and yet the structure of bureaucracy is here.

You see the result, for example, in all too many veterans' hospitals, if you go and look at how long patients wait to be seen, if you look at how long the bureaucracy is willing to hold them around for red tape. If you compare that with the kind of service you would expect at Sears or K-Mart or Walmark or McDonald's or Wendy's, you ask yourself, why is there a difference?

At a trillion, $700 billion dollars, we should be able to do better, and yet I want to argue that those of us who represent the second generation of this movement have to face up to a very powerful reality. It is not just enough to explain why the bureaucratic welfare state does not work or to explain that the values of the left do not work. We need a new paradigm. We need a new approach, a new way of solving things, and we need a lot of local examples to help us solve them.

I think the paradigm is fairly straightforward. The model I would suggest is a triangle, and anybody who is watching can draw one, and I think you can follow this very clearly. Imagine a triangle. One side of that triangle is technological progress. A second side of the triangle is enterpreneurial free enterprise, and the third side of the triangle is basic American values.

Let me repeat that. On one side you write the words technological progress. On the second side you write entrepreneurial enterprise, and on the third side you write basic American values. The result is that you have described the basic things that made America work for 400 years, from the time the Founding Fathers arrived in Massachusetts, from the time the first Virginians came to Jamestown, all the way up to about 1960 or 1965, there was a way of functioning in America. Americans were willing, above and eager, to be involved. They knew that if they want out and did something, if they explored more land, if they trapped more beaver, if they grew more corn, they would be better off. That was entrepreneurial free enterprise, and you were pretty much allowed to go out and try something if you thought it would work.

When Walt Disney came up with the crazy idea of Steamboat Willie, which was a cartoon involving a mouse, he went ahead and did it, and of course

Steamboat Willie became Mickey Mouse and Walt Disney became very wealthy.

When Henry Ford had the crazy idea of inventing an assembly line for cars, he went ahead and did it.

When Orville and Wilbur Wright were sitting around their bicycle shop, they decided they would go ahead and invent the airplane, and they went ahead and did it. None of them felt they had to ask the Government's permission. None of them felt they had to apply for Government loans or contracts and none of them felt they had to submit a proposal in 19 copies and wait for 3 years for somebody to send them back an answer.

Now, that model of change is very, very important, that we encourage people to be entrepreneurs and we had a free enterprise system which rewarded them.

The second side is also very powerful. For almost all of American history, we have relied on technological progress to improve everyone's life. Poor people in America are better off today than rich people were 200 years ago because poor people have indoor plumbing, they have refrigerators, they have televisions, they have telephones, they have access to a technology which literally did not exist even if you were a king or a queen or a millionaire in 1800.

So Americans have relied for 200 years on better technology, giving everyone a better chance to live in the future.

Finally, we had what we call basic American values. Some of them are amazingly simple. You have to study to learn. You have to do your homework. You have to actually be able to pass a test. We are not just going to promote you because you look nice. You have to learn objective facts and objective reality. You have to show up for work on Mondays. You ought to save a little bit out of what you earn each week and in the long run you will save a lot. You ought to build for the future. You ought to be able to own your own home. These are basic common ideas.

One of them is honesty. One of the most frightening things I do is ask every high school class I visit, how many of them know somebody who cheats, and virtually every student raises their hand at virtually every class.

Now, you cannot compete in the world market and you cannot maintain a democracy if everybody grows up thinking it is OK to cheat. Basic honesty is a key to a free market society, because you want to know when you buy a product that it was built by an honest person, and you want to know that it is being sold to you by an honest person. You cannot just rely on the courts to protect you because you never have enough police and you never have enough courts in a free society. You have to rely on the basic decency and the basic honesty of most citizens, and then simply use the courts and the police for the scoundrels and the criminals. So those are basic American values.

One of the reasons we came up with the idea of a triangle is that it is our idea that any good approach, any innovation, any new idea, any new solution inside the triangle beats the old paradigm of the bureaucratic welfare state in the eyes of the left.

In other words, literally when we go around the country, if 500 different school boards have 500 different new ideas, all of them fitting inside basic American values, technological progress and entrepreneurial free enterprise, maybe the answer is to let them all find out, rather than go through some long elaborate intellectual process and writing out 90 pages of justification and shipping it off to people in Washington who have never seen your town, never seen your school, never seen your child, what if we just say within very broad zones, if you local folks think it will work better, why don't you try it in health care? Why don't you try it in helping our veterans in health care? Why don't you try it in education? Why don't you try it in catching and keeping criminals locked up?

If I could summarize it, it would be a very simple concept, that if we can get in the habit of applying common sense while focusing on opportunities, that we can cut through the redtape and we can cut through the baloney and we can solve things in America very, very fast. We can have a more commonsense Pentagon that costs less money. We can have a more commonsense New York City that costs less money.

So what we are going to try to do on May 19 is have an American Opportunities Workshop available to anyone who wants to participate, broadcast by satellite to anyone who has a down link or a dish receiver or has access to a place that has a receiver.

We do not care whether you are Democrat, Republican, whether you are a libertarian or what your background is. We do not care that you have any particular interest. What we care about is the notion that you agree that for the 1990's to be successful, we have to help America change so we can prepare for the 21st century. We want to share ideas, and in particular we want to share things that work. We want to share proposals that work.

Over the next few weeks I am going to lay out a series of ideas that work. I am going to lay out a series of success stories and draw the constrast between what happens when we empower Americans and allow them to develop new ideas and when we encourage them to find new solutions and how much they can change things, how much they can improve things if only we trust the American people to use that kind of good commonsense.

My hope is that by seeing real success stories, not by hearing theories, not by hearing ideology, not by hearing general rhetoric, but by hearing case after case after case of good news about America, on opportunities that work, of insights that are helpful, of projects that have applied entrepreneurial free enterprise or technological progress or basic American values, or all three, that folks will decide that this is an idea whose time has come.

□ 1830

Maybe it is time to launch the second generation of a movement that has already changed America but has a long way to go. Maybe it is time to develop commonsense, focus, and opportunities, and maybe it is time to develop 21st-century citizenship by getting people to focus on new solutions for the 1990's.

Mr. Speaker, I yield to my friend, the gentleman from Wisconsin [Mr. ROTH].

Mr. ROTH. Mr. Speaker, I thank the gentleman from Georgia for yielding.

First of all, I want to say that I congratulate the gentleman for taking this special order and talking about something that I think is extremely important to all of us, and that is to take a look at the future.

Here on the floor of Congress, the gentleman from Georgia well knows, we either have the problem of the budget or savings and loans or child care, the social security tax, whatever the issue may be, and we do not have enough time to look at the long-range problems that this country is faced with. So I welcome the gentleman's initiatives.

I serve on the Committee on Foreign Affairs, and I have for a long time been interested in what is America going to look like in the 21st century. What is the world going to look like in the 21st century?

When we have a chance to talk with people from around the globe, I think we have broken it down to three main pillars in the 21st century, and I think the gentleman has really touched on those pillars.

It is interesting that most of the problems, or many of the problems, we face here on the floor of Congress deal with this third pillar, the gentleman from Georgia, and that is our traditional values. When we take a look at what is happening in the savings and loan industry, it is costing us now some projected $500 billion, half a trillion dollars when this price tag is all finished. Why? Because of dishonesty to a great degree in the industry. When we take a look at our budget, why do we have a huge budget deficit?

Basically because we have a lot of waste, fraud, and abuse, and so if we just got back to that one traditional value of honesty, half of the problems we are faced with on the floor of Congress would be resolved.

I congratulate the gentleman for his initiative.

The question I am going to have is: How do we get there from here? Yes, we have to get back to the basic values on honesty, the work ethic and the like. I hope on May 23 we can get some ideas from people around the country.

We would be surprised, and I always am whether I speak in the Midwest or the Far West or wherever, basically people are concerned about these very issues today. Yes, we know the liberal welfare state is dead just like Marx and Engels are dead in the Soviet Union. But how does one change the system? How does one get back to the fundamental values? That is the key issue.

I salute the gentleman from Georgia for leading the initiative in that regard.

Mr. GINGRICH. I thank my colleague, the gentleman from Wisconsin, for participating. I will say, first of all, that it is May 19, a Saturday.

The point the gentleman made, and I know he served on the Committee on Banking, Finance and Urban Affairs, and he was one of the persons involved in warning us about the dangers of the savings and loan problem. Of course, there is an example whereby having the bureaucratic welfare state step in and claim that it was doing the regulating and claim that it was doing the supervising when it was not, thousands of people lost their savings, and taxpayers are going to lose something like $50 billion to $100 billion by the time it is done. It is a failure of the welfare state to be able to deliver on what is promised, because anytime there is a race between a crook and a bureaucrat, the crook has a lot bigger incentive to stay up at night figuring out how to win. The bureaucrat says, "It is 5 o'clock, I will go home." The crook hangs around for another couple hours trying to figure out how to get that extra million dollars.

I believe it was one of the millionaires who probably, I think, did not go to jail who went bankrupt who had 49 Rolls Royces in his garage at the time that he collapsed, one just knows looking at that that in a free-market environment where we had a much tougher self-regulating environment and did not rely on the bureaucracy as much, that no sound, prudent banker would have trusted that guy, because they would have seen him riding around town in another Rolls Royce, and they would have said, "Wait a second, he is living too high on the hog."

I would cite an idea that I think the gentleman brought up in meetings that I have been in, and that is the notion that we ought to have a risk-based insurance fee, that if we truly had a private insurance that was covering one's deposit in the way that if they were depositing it at a bank or a savings and loan that had high-risk loans, they would have to pay a higher insurance premium than if one were depositing in a bank or savings and loan that was investing in more prudent loans.

Just the act of suddenly having a sliding scale for risk would suddenly change the pattern, but what we did for a long time in response to the Depression is we insured every loan equally. We insured it no matter how dump the banker of the savings and loan manager, how big the risk, how foolish the way they were lending money.

Let me say one last thing, because the gentleman really reminded me of this when he talked about his own efforts to go out and to learn around America.

One of the purposes of putting this workshop together and of launching the second generation of the movement is to say that, frankly, we think that 90 to 95 perent of the new ideas or the new solutions are out in America. They are not in Washington, DC. They are out in a small town, they are out in a city council, they are out in a school board, not at Harvard or Stanford.

We think it is very important to develop an approach where people send us good ideas, send us success stories, and our real job here, I think, is to serve, in a sense I think, to broadcast the good news and broadcast the successes around the country and recognize that maybe Washington has more to learn from America than America has to learn from Washington.

Mr. KYL. Mr. Speaker, will the gentleman yield?

Mr. GINGRICH. I am happy to yield to the gentleman from Arizona.

Mr. KYL. Mr. Speaker, I want to fully associate myself with the gentleman's remarks and commend him for not only this special order but the American Opportunity Society Program on May 19 and for helping to provide some of the answers for how we get to the next century, as our colleague from Wisconsin was just inquiring.

I look forward to working with the gentleman over the course of this year and in the years to come to achieve these goals.

Mr. GINGRICH. I was going to say in closing that the American Opportunities concept and the American Opportunities Workshop is nonpartisan. We are very eager to have anybody of any background who has new ideas and new approaches or things that they think will work so that we can have the kind of successful, educated and healthy and prosperous America all of us want in the 21st century.

I would urge any of my colleagues or any of their constituents who are interested to contact my office. We are going to try to really work to develop the best set of new ideas in these special orders and to develop an approach that allows us in Washington to learn from the rest of America. I look forward very much to working with my colleagues in the next few weeks.

CALL FOR A NEW NATIONAL SECURITY STRATEGY

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from Missouri [Mr. SKELTON] is recognized for 30 minutes.

Mr. SKELTON. Mr. Speaker, this Nation needs a new national security strategy. The need arises in part because of the successes of the strategy of containment that has served us so well for four decades. It also arises because the single-minded pursuit of containment of communism, however necessary, has feft the Nation ill-prepared to cope with developments in the world that have little to do with communism.

In many ways the present period is comparable to the months immediately after World War II. In 1945, there was much joy because the war had been won. The cry throughout the country was "bring the boys home"—and we did. However, the future at that time was uncertain. Little did we realize the great strategic threat which Stalin's Russia would assume.

Today, there is much happiness in the West. The momentous events of Eastern Europe in the last half of 1989 have signalled the end of the cold war. As in 1945, the call has gone out to cut the defense budget. Once again, however, the future is unclear. Before we disarm I believe it would be better to assess the threats we face before we arbitrarily slash our defenses.

In my remarks today I will discuss the issues and problems that a new strategy must address, the timing and responsibility for the development of the new strategy, and my intention to propose legislation that will ensure development of the national military component of a new national security strategy.

Mr. Speaker, the confident, steadfast defense of democratic, constitutional, Western values by this nation, its allies, and its friends, has resulted in a victory every bit as significant as our victories in World War I and World War II earlier in this century. Our heavily burdened citizens, who gave so much in faraway places such as Korea and Vietnam and who dedicated immense portions of their national wealth to the struggle, deserve a respite. They deserve the luxury of

time to ponder and enjoy the magnificent affirmation by the Eastern bloc of the preeminence of human rights and human dignity over totalitarian collectivist ideology.
